Dr. Maniu has suffered from two serious handicaps, in having to rely for the most part on inexperienced helpers and in having to keep the balance even between the two parties that compose his following. The ideas which his Government sought to put into practice aroused enthusiasm throughout the country, and great hopes were raised that at last Roumania was on the threshold of an era of prosperity. Before the new Government could start to build, however, it had to clear away much of the tangled undergrowth that its predecessors had allowed to grow up. The incubus of debt and unsound finance bequeathed it proved more formidable than had been anticipated, and seriously interfered with the carrying out of the plans to which the National-Peasant leaders were committed. A less honest Government would have shirked its responsibilities, as it was inevitable that the imposition of fresh taxation, accompanied by a general tightening of the fiscal screw, must impair its popularity: but Dr. Maniu has made no effort to evade his clear duty, and it is certain that Roumania will benefit in the long run, however unpleasant and irksome the process of self-discipline may be at the time. A feature of the National-Peasant régime has been the constant Cabinet changes, which have affected more than half a dozen Ministries. This fact in itself is sufficient to hearten the Opposition, as it is held to point to the difficulty experienced by Dr. Maniu in driving his Transylvanian Nationalists and the Peasant Party in double harness. Political tradition accustomed Old Roumania to a regular swinging of the electoral pendulum, but it was thought that with the transfer of power to new hands representing the provinces added since the War a greater degree of political stability would be secured. Whether the notorious fickleness of the Roumanian electorate can be held in check until the present Government has made good its lack of administrative experience remains to be seen.

It was this lack of experience on the part of the "new men" that provided the Liberals when in office with one of their most effective arguments against any change of Government, and may be supposed to have carried some weight at the time with the Council of Regency. By way of emphasising its own superiority in this respect, the Liberal Party has chosen the present moment to place a complete programme before the country, designed to convince the electors that they have only themselves to blame if they do not exchange shoes that have admittedly begun to pinch for a much more comfortable pair. This manifesto has much in common with its counterparts in all countries; it pays homage to all political and administrative virtues, and represents them as easy of attainment were it not for the inherent vices of the party in power. The political game is played with few radical variations in any part of the world. Special interest attaches, perhaps, to the section devoted to the economic problem, in view of the Party's past record. The manifesto declares that Roumania must keep in view the strict solidarity which links together modern States in all spheres of activity. "For this reason the National-Liberal policy implies no hostility in regard to foreign capital. On the contrary, the Party recognises the necessity for the collaboration of foreign capital for the development of the country's riches. It asks, however, that this participation should take place under conditions useful to both parties, while safeguarding Roumanian capital and labour, as well as Roumanian initiative." The significance of these words, as the Party's opponents point out, depends on the extent to which "safeguarding" is carried out. Agriculture, it is noticeable, comes in for special attention in the new programme, which in this respect may be regarded as seeking to meet another defect in Liberal policy when the Party was last in power. Industry, on the other hand, the Party's *enfant gâté*, has only a few brief sentences devoted to it, and here the authors of the manifesto possibly show their appreciation of the fact that it is difficult for them to mention the subject without exposing themselves to the taunt that assistance for "national industries" entails the direct filling of their own followers' pockets. For the rest, there is ample evidence in the new programme that the Liberal Party is not unmindful of the lessons inculcated by recent history, and consequently the outside world, which is anxious only to see Roumania pulling her full weight in the councils of the nations and advancing steadily along the road of progress, can watch with interest and without misgivings her efforts to solve her own political problems

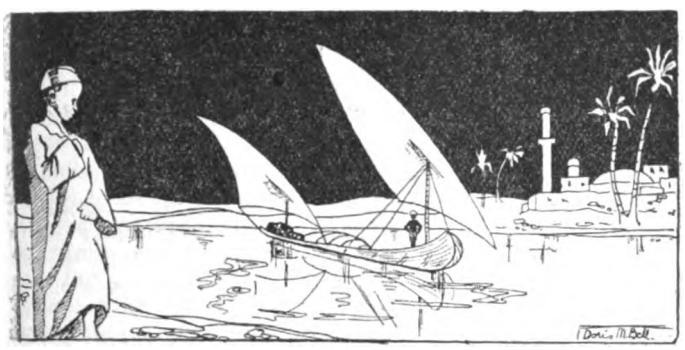
From Our Own Correspondents.



EGYPT.

Cairo, May 10.

The Breakdown.

The breakdown of the Anglo-Egyptian Conference was received very quietly here. The European communities were frankly delighted. They had never ceased to express grave misgivings on their future, if the treaty was signed and British control relinquished. The British regard the breakdown with mixed feelings, for, although there is a very considerable opposition to the proposed agreement, it is felt that the old, sorry story will now begin all over again, especially as Mr. Henderson has practically invited the Egyptians to think over matters and then come back for further discussions. Strangely enough, the Egyptians themselves, as a community, were the least interested. Naturally Egyptian political circles took the keenest interest in the proceedings and for the most part are pleased with the result. They have had it so well drummed into them by their leaders that "there is no life for Egypt without the Sudan" that rather than accept the very material advantages offered to Egypt proper, they much prefer forgoing them to relinquishing their "rights" in the Sudan.

Undoubtedly Nahas Pasha has consolidated his position by his refusal to accept the British terms, and those Egyptians who would have liked to have seen the matter more definitely settled are very much in the minority. The majority of the Egyptian nation, however, the *fallahin* and the working classes in general, are very much more interested in the reinstatement of the *Corvée*, under which their services are conscripted to combat the locust menace. There is considerable resentment felt throughout the country, for economic conditions are bad, and the fellah's one desire is to be left in peace to till his little plot of land and to raise his crops. Had there existed a general state of prosperity, the breakdown in negotiations might have been really serious, for when an Egyptian has money in his pocket he is extremely easy to excite and is quite ready to leave his land and indulge in demonstrations. In bad times, however, politics simply do not exist for him.

Press Comments.

The Arabic Press has so far been very reticent and the main Wafdist papers have made no comment whatever. The *Courban Bairam* holiday began on Friday and lasts until Monday, and several of the papers, taking advantage of the occasion, did not appear on Friday or to-day. They are taking great pains not to commit themselves until the Delegation returns to give them a lead on the attitude which they are to adopt. One paper contained a "blood and fire" leader yesterday, full of such sentences as "The time has come for the decline of the British Empire. Its greatness has been built up on atrocities and the usurpation of others' rights by sword and fire. Such greatness cannot be expected to live for ever." The Delegation arrives next Wednesday or Thursday, and, if their arrival is anything like their departure, Bedlam will be let loose again. The attitude adopted by the Wafd now will show what truth there is in the many professions of friendship and good will and the friendly sentiments expressed towards Great Britain by Nahas Pasha after the breakdown.

Confidence Trick in Alexandria.

An Alexandria doctor has been the victim of a confidence trick which showed amazing audacity on the part of the trickster and even more amazing simplicity on the part of the victim. Two men called upon this doctor and showed him some curious little stones which they said they had found. Inside each of the pebbles was a piece of gold, a Turkish sovereign, in fact, worth about 17s. The men stated that they had found a sack containing about 3,000 of these stones. They said they were poor men who would be immediately suspected if they tried to dispose of them: would the doctor buy them? The doctor would, and paid over £1,600 in banknotes for the sackful of stones, about ten of which he had inspected. Unfortunately when the men had disappeared he found that the only stones to contain gold were those which he had examined in their presence. The police are now searching for the criminals.

Uses of Aerial Transport.

The extreme usefulness of aerial transport was illustrated this week when a child lay so seriously ill in Cairo that, unless a certain serum, only obtainable in Paris, was procured with a very short time there was no hope of saving its life. The child was taken ill on May 1, and the illness was not diagnosed as infantile paralysis until the next day. The only cure for that terrible and usually fatal disease is a special production called Anti-Palyonjelite serum prepared by the Pasteur Institute of Paris. The essential feature in the use of this preparation is that it must be given at the earliest possible moment. It was absolutely impossible for the serum to be sent to Egypt by normal means, if it was to reach here in time. Mr. Catz, the child's father, therefore, wired to his brother in Paris to procure the serum and dispatch it to Egypt by any means, regardless of expense, which would ensure its arrival before May 8. Mr. Catz dashed to the Pasteur Institute in the middle of the night, procured some serum, and immediately chartered a special aeroplane which was to leave Paris and endeavour to catch the Imperial Airways lines at Vienna. The special 'plane missed the Airways liner at Vienna, but chased it as far as Budapest, where the serum was handed to the Airways pilot. At Salonika the Airways liner was delayed and the liner was due at Alexandria at 9 a.m. on Tuesday morning, the last day on which the serum could be used with success. The morning express leaves Alexandria for Cairo at 9 a.m., and so unless the serum could be put on the train there

was little hope of saving the child's life. All authorities co-operated nobly. The Customs made special arrangements for admitting the serum without the usual formalities, the railway authorities consented to hold up the train as long as they possibly could, and arrangements were made to allow a car to have a clear run from the docks to the station, about seven miles. A launch met the 'plane as it landed in the harbour, the serum was transferred, a fast car awaited the launch and then tore through the streets at 60 miles an hour while policemen held up all other traffic, and at 9.15 the package was put on to the train and hurried to Cairo. The injection was made at once, and it is believed that the child will live.

ALBANIA.

Tirana, May 14.

Refugees from Yugoslavia.

Many nations, Albania among them, have reason to be grateful to the League of Nations. The debt of gratitude owed by the Albanians would be increased if the Council were constrained to take action in connexion with the memorandum presented last Tuesday to the Secretary-General by three refugee priests from Kosovo on behalf of the Albanian minority in Yugoslavia. It is not to be expected that the League can undertake a revision of frontiers, but the establishment of a permanent neutral commission to watch over the regions on either side of the Yugoslav-Albanian frontier might well be in the interests of both countries. The charges brought against Yugoslav local officials, if true, cannot be pleasant reading for the Belgrade Government; and if untrue, their refutation is more likely to carry conviction when endorsed by a neutral body of opinion.

In connexion with the refugees, the great work performed since 1924 by the late Lady Carnarvon, Mrs. Aubrey Herbert, and their representative in Albania—Mrs. Pennington—has not been sufficiently made known. Lady Carnarvon established a fund, now administered by Mrs. Herbert and a committee in London, for the provision of agricultural equipment and medical relief to the refugees; and in 1927 Mrs. Pennington began to distribute looms to the women. Arrangements were also made for the marketing of the very beautiful work produced by the women, and a depôt exists in London at 5, Westbourne Street, Sloane Square. The standard of weaving is extremely high, and the price reasonable; and when these facts are more widely known the industry might well become a very profitable one for all Albanian peasantry.

A New Census.

On Sunday, May 25, a census of the population will be taken. All cafés and restaurants (except those of hotels) will be closed, and no one will be permitted to leave his house without a special pass. These measures, similar to those adopted in Turkey, may seem drastic, but are probably the only ones whereby a correct return can be obtained. During the census of 1927 many persons, and even whole villages, escaped registration; and the return showed the existence of a population of 833,627. It is expected that the return of the forthcoming census will show a much larger figure.

An Episode in Parliament.

On the last day of the session of Parliament certain deputies attacked the position of Colonel W. F. Stirling, Inspector-General of Government Services, whose very difficult task it is to report and check any abuses or peculation in Government departments. It was contended that the employment of a foreigner in a position which gives him access to State secrets is contrary to the Constitution. It is unfortunate that the great work which the King, his Government, and his advisers are doing for the country, and their efforts to eradicate the last vestiges of Orientalism, should be hampered by opposition which is open to the charge of being either petty or personal. The presence of Col. Stirling, and of the British Gendarmerie officers, is an assurance to Europe that Albania is not under the control of any one Power. It may, perhaps, be thought that the attack on Col. Stirling was inspired from Italian sources, but this is far from being the case. Italy is at pains to refute the allegation that she is aiming at more than the assisting of Albania to establish her independence, and she prefers, therefore, that the British should remain.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are INVITED for ASSISTANT MASTERSHIPS for teaching Commercial Subjects in the Intermediate Schools of Commerce.

Applicants must possess a Commercial University Degree (preferably with honours) and some experience of teaching.

The salary offered is £E450 a year for applicants with at least two years' experience, and £E415 for applicants with less than two years' previous experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 30, Victoria Street, S.W.1.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are INVITED for ASSISTANT MASTERSHIPS for teaching English in Egyptian Government Secondary Schools and Intermediate Schools of Commerce.

Applicants must either possess a Degree (preferably with Honours) from a University, and (preferably) have had some teaching experience in Secondary Schools, or possess a Teaching Certificate from the Board of Education and have had at least two years' experience as teachers.

The salary offered is £E405 a year for Assistant Masters with a University Degree, but no previous teaching experience, or less than two years' experience, or with a Board of Education Teaching Certificate and between two and five years' teaching experience; and £E450 a year for those with a University Degree who have at least two years' previous experience or the Board of Education Teaching Certificate and at least five years' teaching experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 30, Victoria Street, London, S.W.1.

PALESTINE.

Jerusalem, May 8.

Sir John Hope Simpson's Mission.

The news that Sir John Hope Simpson had been appointed a special commissioner to come out at once to Palestine to consult with the High Commissioner about problems of Palestine development, came as a surprise and, to the Jews, quite obviously a disagreeable surprise. The Arab Executive is suspending judgment until it has had from its London delegation instructions about what it should tell the Arab public to think on the subject; but Jewish opinion made up its mind promptly and unanimously that it could anticipate little good from this new mission of inquiry; the news of it quite quenched the jubilation that all Jewish Palestine was just then feeling at the victory of the Tel Aviv Maccabeans over the Northamptonshire Regiment in the final round for the Palestine Football Challenge Cup.

The appointment is interpreted by them as a flat rejection of the Balfour-Smuts-George proposal of a Commission to study the local Administration's failure to make a working success of the Mandate; instead it is proposed to set on foot an inquiry which is not to discover the faults in the administration of the Mandate but to find why the Mandate has proved, as the Shaw Commission would imply, unworkable. Sir John's mission in a word is to find holes in the sacred Mandate itself. These fears have been largely provoked by the cabled account of some comments by *The Times* on the appointment.

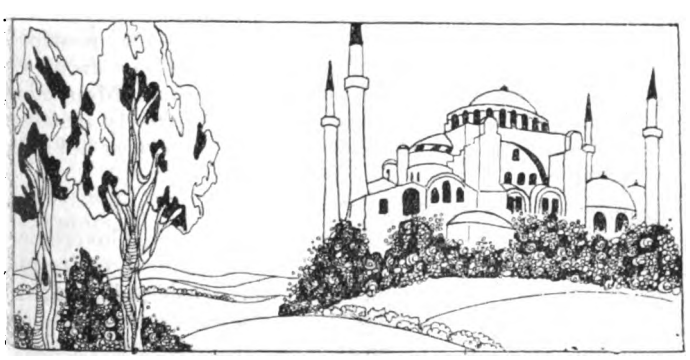
Little comfort is derived from the fact that Sir John

Digitized by Google

has had experience in Greece in the wholesale and successful re-settlement of Greek refugees from Turkey, for it is argued that whereas the Greeks were received back into their home-country with all good will and every possible State assistance, here in Palestine the returning Jew meets with the most grudging official reception, many administrative hindrances, and never a hint of a grant of State-owned lands; and that while in Greece every official endeavour was exerted to make possible the seemingly impossible, in Palestine the official endeavour is rather to make seem impossible what is in reality possible.

"Talkies."

The same historic week-end which marked the defeat of the British Army by Tel Aviv and the receipt of the news of the Simpson visitation, saw also the first appearance in Palestine of the "Talkies," and, as is their way, they talked American. Thus a new problem arises for Hebrew Palestine—for the bulk of the frequenters of these things are the impressionable Jewish youth. It was clearly useless to adopt the usual local tactics of booing at the performers for not talking Hebrew, but various Jewish civic authorities satisfied their consciences by formally protesting against the introduction of "strange tongues" into the Hebrew Holy of Holies, and staying away. For the rest it has only been found possible to proscribe in the streets and Hebrew homes any singing of the "Theme Songs"—if that is the correct term—which (according to the proclamation of the "Society of the Defenders of the Language") "will undermine the foundations of our Hebrew music! Let them not take root in our midst." Hope is held out that Hebrew will in due course be reproduced by the "Talkies." It may be noted that some "Sound-Films" company was at work in Jerusalem a fortnight ago. It recorded the sights and sounds (Arabic) of the Nebi Musa processions as well as the spectacle and speeches (Hebrew) of the opening ceremony of the "David Wolfssohn Building" on Mount Scopus, which houses the Hebrew University and Jewish National Library. "And thus," as one Hebrew paper promptly and snobbishly pointed out, "shall the whole world come at last to realise the respective contributions to civilisation of the Arab and the Hebrew populations of Palestine."



TURKEY.

Istanbul, May 12.

The Ankara Libel Action.

The libel action instituted by Mahmoud Essad Bey, Minister of Justice, against Haidar Rifaat Bey, leader of the Turkish Bar, is still proceeding at Ankara and, to judge by the evidence of the witnesses for the defence, the Minister's case would not appear to be a particularly strong one.

Some astonishment was caused at the opening of the proceedings, when, the defendant in person and plaintiff's counsel having presented themselves at the bar to examine and cross-examine witnesses, the President intimated to them an order of the Supreme Court whereby there was to be no examination and cross-examination, but merely statements by witnesses. Haidar Rifaat Bey and his opponent's counsel, continued the President, might, therefore, retire into the body of the Court, where they might follow the proceedings as simple spectators.

The following three leading questions formed the basis of the statements which the witnesses were invited to make:—

(1) Was the Minister of Justice violating the law when he ordered the transfer from Constantinople to Broussa of the trial of the Constantinople Editors charged with the publication of articles calculated to perturb public opinion?

(2) Was the Minister exceeding his authority by promising advancement to the Judges trying that case, as a result of their threat to resign, if the transfer of the action to Broussa was persisted in?

(3) Had the Minister exerted pressure on the Bench at Smyrna, in order to procure the acquittal of Kadrie Hanoum, and did he, to this end, bring about the disgrace of the Magistrate Hikmet Bey, whilst increasing the emoluments of the Magistrate Nazim Bey by £T50 a month?

Evidence was given by two Professors at the Faculty of Law, a former Under-Secretary at the Ministry of Justice, and two prominent lawyers. The statements of these witnesses, save on one point, were remarkable for their unanimity. With the exception of the former Under-Secretary of State, who believed that the Law tolerated, if it did not specifically provide for, the transfer of pending cases from one jurisdiction to another, the other witnesses considered the Minister's action in the matter of this transfer to have been *ultra vires*, adding that they would most certainly have tendered their resignations, had they themselves been the Judges. There was complete unanimity among the deponents with respect to the pressure said to have been exerted by the Minister on members of the Bench in the drawing up of verdicts, their answer being in the affirmative. As to the promotion and increase in the emoluments of Nazim Bey, the witnesses considered that there were dozens of magistrates of greater merit and longer service who merited promotion, and that, therefore, in granting advancement to Nazim Bey the Minister must have been actuated solely by personal motives.

The findings of the High Court are being looked

Turkish Delight.

The little shop of Hadji Bekir, situated in Stamboul, not far from the terminus where passengers alight from the Simplon-Orient Express, must be known to many thousands of tourists who are invariably taken to the little store by their guides and dragomans. Hadji Bekir's lokoums (Turkish delight) are a household commodity in great repute throughout the Near East. The good Hadji himself died many years ago and the business is now run by his son Mouhieddine Bey, who has shown great enterprise in developing and extending his father's undertaking.

For years past it has been customary for the "Comedie Française" of Paris to send a troupe to this city once or twice a year to give a series of representations at the Theatre Français in Pera. This year the leading star of the troupe was Miss Marie Bell, whose art was so much appreciated, that she was induced to take the whole troupe up to Ankara, where she also gave a number of plays which were all attended by the President of the Republic. On her return to Istanbul, much hospitality was lavished on the leading actress, and Muhieddine Bey, who quickly fell under the spell of her charm and became her most fervent admirer, presented her with a valuable ring. This little incident appears to have aroused the ire of the social reporter of the *Djumhouriet*, who proceeded to satirise the action of Muhieddine Bey in macaronic verse in the columns of that journal, in which the words "ring" and "bounder" were made to rhyme.

A day or two later, Muhieddine Bey met the journalist face to face in a crowded Pera theatre. Without proffering a word, he vigorously boxed both ears of the offending reporter and then walked out of the building. The journalist is now claiming damages from the manufacturer of *Rahat Lokoum* for assault and battery.

Passport Regulations.

The following extracts from the new passport regulations may be of utility to those contemplating a visit to Turkey.

Travellers arriving without a "visa" will be fined double the amount of the "visa" fee. Those arriving without a passport will be given five days in which to regularise their position by application to their Consular authorities, during which time they will be kept under police supervision; they will pay a fine of double the amount of the "visa" fee.

Foreigners belonging to the following categories of persons will be refused access to Turkish territory: Beggars and vagrants; fugitives from Turkey or such as have been expelled on any grounds whatever; persons suspected of belonging to organisations aiming at disturbing public order and security; refugees who have not first obtained permission to return to Turkey; women of loose morals and such, whether men or women, as are engaged in the white slave traffic; persons without a visa who are not in possession of liquid funds equalling the amount prescribed by the Ministry of the Interior.

Foreigners of the foregoing classes who may succeed in entering Turkish territory in defiance of these Regulations will be deported after trial by the Courts.

Foreigners arriving in Turkey must report their arrival to the nearest police station within 24 hours, when they will indicate the name of their hotel or other residence. Foreigners who intend to stay in Turkey for less than 15 days are exempted from this formality

ROUMANIA.

Bucharest, May 7.

The Financial Situation.

The Minister of Finance has issued a statement of the revenues to the Treasury for the first three months of this year which must be regarded as very encouraging. This may be due partly to the measures adopted by the present Government to insure the proper collection of taxes, partly to the new and increased taxes imposed, and partly, perhaps, to a slightly brighter outlook on this market in view of the coming harvest, which is expected to be good. Up to the end of March this year 6,737 million lei had been paid in to the Treasury, as against 5,610 million lei for the same period in 1929 (figures published in *Argus* of April 26). The above figure for 1930 is, however, not complete for purposes of comparison with 1929, as it should include further revenues now paid into the funds of certain State Departments which have been given an autonomous administration this year. The revenues for the first quarter of this year represent 16.7 per cent. of the total Budget estimates, against 16.1 per cent. last year for the same period. This increase in the revenues this year is attributed partly to the State Monopolies and partly to other State services which have been organised on a semi-commercial basis. Under these conditions it is confidently hoped that the estimated revenues for the year will be fully realised.

The Liberal Demonstration.

A really formidable and imposing Opposition demonstration was organised by the Liberal Party on Sunday last, May 4. A huge mass of people (numbering, it is stated, almost 100,000) collected from all parts of the country (but mostly, no doubt, from the immediate neighbourhood of the capital), assembled in the great boulevards in the north of Bucharest about nine o'clock on Sunday morning. There they were organised into four columns and marched down the Calea Victoriei and the Boulevard Bratianu, carying banners and cheering for the Party leaders in turn, especially M. Vintila Bratianu. For three or four hours all traffic was brought to a standstill on these main arteries of the city, while this imposing mass of people sauntered on, stopping occasionally to cheer one of the eminent members of the Party who watched them from the pavement. They were a perfectly orderly crowd and very good-natured, doing all they could (which indeed was not much) to avoid stopping the progress of foot passengers. It seems to be generally admitted that no such tremendous political demonstration has ever been seen in Bucharest, and it will certainly be difficult for any of the other parties to equal it. This is especially true as regards the Government Party, whose principal adherents are to be found in the provinces recently united to Roumania, which lie far from the capital on the other side of the Carpathian Mountains, whereas the Liberals recruit most of their party members in Wallachia and Moldavia, the provinces of Old Roumania.

Government Activities.

But demonstrations notwithstanding, the Government works courageously on towards the fulfilment of its programme, and a great many laws of considerable importance have recently been passed. An agreement has been arrived at with Poland and Czechoslovakia under which it will be possible for Roumanian trains to pass through the territories of these countries from Cernautzi to Satu-Mare, thus providing a direct railway connexion between the Bukovina and Transylvania, the lack of which has hitherto been a great inconvenience. Commercial Treaty negotiations are now being carried on with the delegates of several countries, including Great Britain, and the Commercial Treaty with Italy has already been signed. Its terms appear to relate principally to the Customs Tariff. The Roumanian delegation entrusted with the negotiations for the Roumano-Polish Commercial Treaty, headed by M. César Popescu, was to leave for Warsaw on April 28.

Mr. Simon Leader, who lived many years in the East to collect matter for his books, died last week at Tunbridge Wells at the age of 64. He made an extensive study of Muslim life in North Africa, Egypt, and the Sudan, and lived on many occasions with the Arabs in their native villages and slept in the tents of nomadic tribes. His last visit to Egypt was in 1919, when he made a special study of Coptic peoples.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 1.

Good-bye to England.

Those words—"good-bye to England"—occur at the end of what we know as ex-President Patel's second letter to the Viceroy. Before I consider Mr. Patel's resignation, and the extremely partisan letters that he has thought fit to write and publish on the occasion, I would like to call attention again to a fact that is far too seldom in men's minds, when they are thinking about India. It is that there is a high element of the love of play-acting in the Indians. A little contraband salt has been made by the *satyagrahis*, a little impure contraband salt has been eaten, and some persons have had stomach-aches; but the Salt Act is still part of the law of the land, and there is not a creature who does not expect the Finance Member a year hence to give a large figure as the salt revenue collection for the year. Yet the other day, in Allahabad, an "effigy . . . was taken in procession through the important parts of the town and burnt by Pandit Motilal Nehru . . . to indicate that the Salt Law was no more;" the fact being that that law is just as much the law as ever. In the course of those childish effigy proceedings one of the participants is reported to have remarked that "Pandit Motilal Nehru could not succeed in getting the Salt Law cancelled inside the Assembly, but he was now burying it himself outside the Assembly;" the fact being that he was no more burying it than he was burying Cæsar. Only born play-actors of the weaker-minded sort can go through such farcical parades. Think of Cavour, Gambetta, or Bismarck thinking *that* the way of revolutions are made. Not out of rose-water, but out of tommy-rot.

Play-acting Speeches.

People who play-act will not do it only in acts such as burning an effigy; they will make play-acting speeches; they will even play-act in the thinking and dreaming that they do before speaking or acting. They will play-act unconsciously. Mr. Patel's life has been full of play-acting. He has just written this: "I have always maintained, and still maintain, the change in the Congress creed notwithstanding, that the relations between Great Britain and India can only be finally adjusted on the basis of India's right to Dominion Status being acknowledges, without any reservation, and the method of giving effect to that decision being examined in some joint and equal conference between the plenipotentiaries of the two countries, and that the greater delay in finding a solution of the problem on these lines, the lesser the chances for a favourable atmosphere for the purpose, and its general acceptance in this country."

Serious?

Mr. Patel has just written that. You in England will think that it represents a determination on that man's part to make India self-governing, so far as it may lie in his power; that he has looked hard at the capacity of his countrymen to rule India with little or no help from Englishmen; that he has seen in his mind how the gunpowder that is scattered everywhere in India can be kept from exploding; in short, that he is a serious-minded man, and must be taken seriously. I deny that. He is a man self-hypnotised by such phrases as "a joint and equal conference of the plenipotentiaries of the two countries." He has never looked hard at anything. He must be brought to London, he and the others must, and be told that in courteous but firm language by the Prime Minister in person. Indian Princes must be present, and Indians who have been officials of the Government in British India. These must also be present, picked men. When the Prime Minister has told Mr. Patel and the others that they have not amongst them men of the capacity and the honesty and the experience to carry through the difficult task of keeping the administration going in so backward a country, and one so full of age-old strife and conflict, he must be able to turn to such or such a Prince, to such or such an Indian official, and say: "Is it not so, Your Highness?" "Is it not so, Mr. —?" India must continue to be governed by a foreign Power; but the rulers must have far more insight than the English have had hitherto into the life of India—her own, true life. They must promote *that*, Indians guiding them. They must give up what is really the insensate opinion of Whigs like Macaulay that India could be fitted out with paraphernalia of English institutions. They must cease trying to make India bolt political institutions that cut across the century-old order in India. It is our having tried to do that, that has made us so hated in India. When your eyes pierce through all the webs of unreality in the political speeches of Indians during the past fifty years, that is what you come to—the deep-rooted hatred of the Indians for these well-meaning foreigners who are destroying her own life. Pandit Jawaharlal Nehru said the other day to an Indian (the latter told me this yesterday) that anything imaginable would be better than the present government of India, i.e., by Englishmen who do not mean to, but are destroying India's own life.

Sir Akbar Hydari.

One of the ablest of living Indians, one of the very few really capable administrators that India has thrown up in our time, is the Finance Member of the Nizam's Government, Sir Akbar Hydari. He delivered the Convocation address at Lahore in 1925. It was a most carefully prepared and studied utterance. It is a thing for grief with Sir Akbar that his countrymen have not paid more heed to his words. I wish to quote a passage. Sir Akbar is considering what he saw as a great evil—that in the schools and colleges throughout India English was largely used as the medium of instruction. He says: "A speech belonging to a nation of a widely different genius from our own, when used as the medium of instruction, clogs the ordinary student's brain, while to the exceptionally brilliant student it is a diversion. He studies it and masters it with a histrionic skill which has little to do wth learning and has no connexion whatever with the country's needs. He *acts up to the language*, as it were, assumes a mentality not his own, and thus obscures his natural genius, his natural gifts. He regards the subject of instruction itself as of relatively small importance. Thus, no student can ever hope to express the vital atmosphere of his own mentality, of his thoughts or of his perceptions, in a foreign language; and to burthen his thinking at this early and vital stage with a language over which he has no command and which comports a mentality foreign to his own, is to make that delicate correspondence between thought and expression impossible, upon which alone sound thinking can be based. A lamentable distortion is the inevitable result."

(If you in England cannot understand Jawaharlal Nehru's feeling as I have told you he does, think for a time of that—that his eyes can see nothing in the picture but that "lamentable distortion.")

Blind Leaders of the Blind.

A very confusing thing is this that Indians will themselves see as a good thing for India, and will ask the English officials to give them, what after fifty years of trial is found to have very bad results. It was Ram Mohan Roy and others who petitioned for such colleges and high schools as we still see in India—institutions in which most of the instruction is given in English. The fathers in India think to this day that it is a good thing their their boys should be taught history and geography and science by teachers speaking English, because all the time, don't you see? the boys will be learning English too. They do not understand what studying history or science is, because studying is one of the many things that they have never looked at. But they do understand that, if you are to get a post in Government service, you must be fluent in English. They do not object that the Indians "should study English and master it with a *his-*

Digitized by Google

trionic skill which has little to do with learning and has no connexion whatever with the country's needs"—they do not object to that in itself. For one thing, they are hardly aware that it is so. Yet it is so. Sir Akbar Hydari is perfectly right. Not only is the Indians' skill in mastering the English language a histrionic thing; but he has no real learning in the sciences, but a histrionic something in place of it: he has no real political ability, but again a histrionic something: his whole life outsde his life of affection for his kith and kin is histrionic. I do not mean that the Indians, even Sir Akbar, see all this as clearly as I do: but they do sense it, and they sense, too, that if the English had never been seen in India, this all-pervading horrible blight and curse would never have fallen on the country. So many of them hate us. Yet, as I said at the beginning of the paragraph, it was they themselves who asked to be taught through the medium of English. The English officials of the time were not subtle-minded enough to see what an evil thing they were being asked to give India.

First Colleges—then Parliaments.

Though India had little or no capacity to study, having in the course of long troubled centuries lost her capacity to study even along the lines of her traditional learning, you had men asking the Government to establish high schools and colleges in which, except in a few classes at the bottom, the teaching should be done in English. You had English officials too slow-witted to see that it would not do. Similarly you had Indians who had persuaded themselves that Parliaments and franchise would be beneficial to India. They petitioned or agitated for them. The Mintos and Morleys were not subtle-minded enough to see what a curse they would be in India: how they could cut across the public life of India that was then centuries old, breeding incurable discontent. An order of public life cannot establish itself, and maintain itself through long, long centuries, if it does not spring out of the very heart of the people. It was insensate to think that a Parliament elected on a franchise, however restricted, could ever be other than a poisonous thing in India.

The Fiction of Democracy.

Democracy is government by the people. England is called a democratic country. Is it really? The English have a wonderfully deep and sure political sense, and they can work a thing well, and call it by a name, when it is not the thing that would properly bear that name. England, after her experience with those poor Stuart kings, which followed none too good an experience with Tudor kings and queens, said: "We must keep the political power in our people's hands, but they shall only make a direct use of it in grave emergencies." The power in effect, during the nineteenth century, was in the hands of two self-appointed groups—those Greys, Derbys, Russels, Peels, Palmerstons, Cecils, etc.—from amongst the members of which, after each general election, the Cabinet *must* be chosen. What other choice had England ever? Now the English can work out in practice, because they set an instinctive value upon good government, even such a thing as democratic government. They evolve a two-party system, and do you know what the truth about that really is? As far as anything affects seven-tenths of the legislation, and the whole ten-tenths of the executive administration, in that two-party system the second party is the first party called by another name. Mr. Snowden, as you all know, would make equally good a Chancellor of the Exchequer in a Conservative Government. Mr. Baldwin would make a very good Home Secretary in a Labour Government. Not to carry on too long with that, however, but to make my point—if India should serve an apprenticeship of five thousand years to Parliamentary government, she would be as far as she is now from having England's ability to work the system with the abuses of it kept down and under. In India the abuses would always be the poisonous flowers of that pestilent weed. O England, well-meaning but blind country, why make this vain effort to make India another England, a home of Parliaments? You may establish Parliamentary government in India, and keep it going for two hundred years, the political unrest growing more deadly with each decade. Then you will throw up the weary task in disgust. And before five years more had passed India would have spued up Parliaments, franchises, and all the rest of the hated paraphernalia. Why try to make India another England? They do not want us to do it; (2) we do not want to do it; (3) the thing cannot be done.

The President's Resignation.

It is welcome. He has not acted impartially in the Chair. It must be most welcome of all to Lord Irwin; for four years the President has stood over the poor Viceroy, telling him, in a hectoring tone, what to think about everything. Mr. Patel had got so into that habit, that he must end his letter of resignation so: " . . . my official connexion with you ceases from to-day, my personal regard for you shall continue as hitherto." Then he went on to hope they "might some day meet in our unofficial capacity and without reserve exchange notes of our respective actions in our official capacity." One can hear the Viceroy saying, *soito voce*: "Not if I can help it." A sense of humour is not Mr. Patel's strong point.

THE ROUND TABLE CONFERENCE.

The date of the Round Table Conference has been provisionally fixed for October 20, the actual opening following the conclusion of the Imperial Conference which meets at the end of September. From the correspondence exchanged between the Prime Minister and the Viceroy regarding the arrangements for the Conference, the text of which is given below, it is clear that no announcement in regard to the *personnel* of the Conference can be expected for some time. The publication of the letters was preceded by a lengthy statement by Lord Irwin reviewing the course of events since his declaration of November 1 and reiterating the Government's intention to abide by the policy then announced on behalf of H.M. Government.

The statement ends with an eloquent appeal "to all persons throughout India calmly and dispassionately to consider these facts for themselves." "So long as those responsible for the civil disobedience movement refuse to recognise realities and proceed as if all that was necessary was to break the law, regardless of the consequence such action must entail," Lord Irwin concludes, "so long will they be postponing the very things that they profess to desire for India, and that others who do not share their reluctance to see facts as they are, might by this time have gone far to achieve."

Letter from the Prime Minister to the Viceroy, dated March 26, 1930.

My dear Viceroy,—As the Report of the Statutory Commission may shortly be expected, it is now possible to approach some of the practical questions associated with the Conference that his Majesty's Government, on the proposition of Sir John Simon, have expressed their readiness to convene. It is the desire of his Majesty's Government, which I believe to be widely shared, that the Conference should begin its work without any more delay than is necessary to afford reasonable time to his Majesty's Government, in consultation with the Government of India, to consider the problem in the light of all the material then available. I trust that by the early autumn of this year sufficient opportunity for this purpose will have been provided, and I would accordingly propose, if this met the general convenience of those concerned, that the Conference should open immediately after the close of the Imperial Conference. The Indian representatives might reach London about October 20, when the Imperial Conference, which, as you are aware, has already been summoned to meet on September 30, may be expected to have made good progress with its business. It is possible that those who will come from India may be not unwilling to arrive in London while the Imperial Conference is still in session and to utilise any brief time available before the regular work of the Indian Conference could begin, for informal consultations.

As regards the *personnel* of the Conference, it is clearly desirable that this should not be more numerous than is necessary for the principal purpose that his Majesty's Government have in view, of securing that those who will speak for British India should fairly represent the different parties and interests concerned. His Majesty's Govern-

Digitized by Google

ment will welcome your advice as to the best method of achieving this end after such consultation as you may think necessary. The representation of the Indian States is a matter on which you will also think it right, so far as possible, to ascertain the views of Ruling Princes and Chiefs.

There will no doubt be other matters which will require consideration later. But the question of date of meeting and the composition of Indian representation seem the most immediate. I should therefore be glad to hear from you as soon as possible whether the date proposed would be convenient to those concerned in India, and what means seem to you most appropriate for the constitution of the Indian side of the conference.—Yours sincerely, J. RAMSAY MACDONALD.

The Viceroy's reply to the Prime Minister, dated April 17, 1930.

My dear Prime Minister,—I have naturally been thinking over the matters referred to in your letter for some time past, and I have lost no opportunity of making myself familiar with opinion in regard to them. It has long been clear, both from the results of extended inquiry and from the public discussions which have taken place in the Legislatures and elsewhere, that the overwhelming mass of opinion in India, which is prepared to support the Conference, desires the Conference to meet as early as possible. It had, indeed, been freely hoped that the Conference might meet his Majesty's Government somewhat earlier, but I do not doubt that in view of the date previously fixed for the Imperial Conference, such public opinion here will generally recognise that the date you suggest is the earliest that is practicable. If the representatives of India attending the Indian Conference assemble in London about October 20, they will, I anticipate, find no difficulty in employing profitably in informal discussions any brief period that may intervene before their Conference can begin its regular work. I have reason to believe that the Princes are also expecting that the Conference will be held this autumn. I consider, therefore, that the date which you suggest is likely to be acceptable alike to the States and to British India, and shall accordingly take it as the basis of our future plans.

It is important that the representation of India on the Conference should be fairly distributed amongst the sections of those who desire and have a title to be heard, and, after examining several alternative methods and discussing the matter freely with men of widely differing opinions, I have found the predominant view to be that a fair distribution of representation cannot be assured by any process except that of invitation, in consultation, where possible, with the interests concerned. After careful reflection, I am disposed to reach the same conclusion.

In regard to the States, I see no cause to anticipate difficulty in a decision being reached as to the *personnel* of the States' side of the Conference which would be generally acceptable. If, as I hope, his Majesty's Government are able to find themselves in general agreement with these suggestions, I will in due course submit proposals on these lines.— Yours sincerely, IRWIN.

THE LATE J. W. L. LANGFORD-JAMES.

No branch of his widespread activities in India will feel the loss of the advice and assistance of the late Mr. John Langford-James more than the European Association, and a moving and appropriate tribute to his memory appears in the current issue of the Association's journal, the *Review of India*. "John Langford-James," writes the author of the notice, whose identity is thinly disguised over the initials "R. B. R.," "was a rare personality, the sound of whose name kindled the minds of all who knew him. Wherever he went he was welcome and left good friends behind him. Few men on this side of India have been so loved and respected by Britons and Indians alike. The reasons for this affection—for it was more than popularity—are not hard to find. To the gay warmth of an Irish nature John Langford-James added a willing and richly stored mind, a brave generous heart, and a capacity for leadership combined with a complete absence of anything approaching conceit. He was always the first to contribute his share, and a good deal more than his share, to the general happiness and welfare, and he was the last to claim any reward for himself.

"But there was a good deal more than *bonhomie* in the character of John Langford-James. . . . Under a humorous and somewhat bantering outlook on life, there was a discipline of adherence to fixed principles. Only his most intimate friends knew the rigour with which John Langford-James enforced from himself an unswerving obedience to the standards of duty which he accepted. In his work he was the soul of rectitude, devoted to the highest ideals of his profession, and nothing so quickly aroused his anger and contempt as a laxity towards the great traditions of the Bar. A passionate belief in the justice of his cause, reinforced by his remarkable ability as a speaker and a cross-examiner, made him the great advocate that he was. In this respect he died 'on the crest of the wave,' for, as an advocate, he had no superior and few equals in India. He loved his life at the Bar; his profession was something more than his *métier*, it was for him the *vivendi causæ*. The tremendous hours of work which he devoted to his cases were never grudged, but they shortened his life, for he gave himself no respite."

INDIA HOUSE.

It is officially announced that the King will formally open the new headquarters of the High Commissioner for India at India House, Aldwych at noon on Tuesday, July 8. His Majesty, who will be accompanied by the Queen, will be received by the High Commissioner, Sir Atul Chatterjee, and THE NEAR EAST AND INDIA understands that it is probable that the Secretary of State for India will be in attendance on their Majesties. The ceremony will take place in the Library, where the King will receive, and reply to, an address from the High Commissioner, and will be followed by a short tour of inspection of some of the main rooms.

The building, which has been in use for two months past, and is one of the most magnificent buildings of its kind in London, was designed by Sir Herbert Baker, and erected at a total cost, including its equipment, of approximately £325,000. As stated in THE NEAR EAST AND INDIA of January 23, when the main features of the building were described at some length, as much as practicable of the material used, notably the timbering throughout, has been brought over from India, and the combination of Eastern designs and ornamentation with the utilitarian requirements and conveniences of a modern Government office has been most ingeniously and effectively contrived.

THE COUNCIL OF INDIA.

The Secretary of State for India, in the exercise of powers conferred on him by the Government of India Act, has re-appointed Sir Campbell Ward Rhodes as a member of the Council of India on the completion, on May 11, 1930, of five years' tenure of this office.

"CRIME IN INDIA."

Owing to a typographical error in the notice of Sir Cecil Walsh's "Crime in India," which appeared in the issue of THE NEAR EAST AND INDIA of May 15, the reviewer was made to say: "Sir Cecil Walsh, who is clearly neither a weak nor a competent judge . . ." The sentence should, of course, have read: "who is neither a weak nor incompetent judge."

In reply to questions in the House of Commons on May 19, Mr. Benn, Secretary of State for India, stated that the situation in India still contains elements of uncertainty and instability, but there is no weakening of control, and in several directions there have been signs of improvement. THE NEAR EAST AND INDIA understands that copies of the first part of the report of the Statutory Commission on India, presided over by Sir John Simon, will be sent by air mail to India from Croydon on Saturday.

PERSONAL AND GENERAL

TO-DAY

May 22, 1930 (New Style).
May 9, 1930 (Old Style).
Dhulhijja 23, 1348 A.H., of the Muslim Calendar.
Iyar 24, 3690, of the Jewish Calendar.
Khordad 1, 1309, of the Persian Calendar.

General Sir Philip Chetwode arrived at 44, Grove End Road on May 17 from India.

Sir Seymour King will arrive in London on May 24 from a cruise to the Mediterranean.

The Prince of Wales received the Earl of Inchcape at St. James's Palace on May 13.

Lady Boyle, wife of Sir Edward Boyle, gave birth to a son on May 14, at 63, Queen's Gate.

The National League is organising a meeting in support of the Arabs of Palestine on May 29, at 7.45 p.m., at the Queen's Hall.

The Duke and Duchess of Sutherland arrived at Marseilles on May 16 in the P. and O. s.s. Viceroy of India on their way home from India.

Sir Ronald and Lady Storrs with Miss Mary and Miss Lucy Clowes will arrive at 84, Elm Park Gardens, S.W.10. on May 25 from Cyprus.

Sir Alexander and Lady Kay Muir, who have been in London for some days, left the Ritz Hotel on May 15 for Scotland.

His Excellency the Afghan Minister (General Shah Wali Khan) had the honour of being received by the Queen at Buckingham Palace on May 13.

Sir Denys Bray had the honour of being received by the King at Buckingham Palace on May 17 upon his appointment as a Member of the Council of India.

Under the auspices of the Victoria Institute, Mr. Israel Cohen, Secretary of the Zionist Organisation, will read a paper on May 26 upon "The Jews under the Palestine Mandate." The lecture, over which Mr. A. W. Oke will preside, will be given at 4.30 p.m., in Committee Room B., the Central Hall, Westminster.

The Calcutta Dinner will be held at Grosvenor House, Park Lane, on Tuesday, June 3. The Marquess of Zetland will preside, and the guest of the evening will be the Rev. John Graham of Kalimpong.

Nahas Pasha and the other members of the Egyptian Delegation, with the exception of Osman Pasha Moharram, who is staying for a short time in France, arrived in Egypt on May 19 on their return from London. They were received by enthusiastic crowds, both at Alexandria and Cairo.

Viscountess Erleigh presided at a meeting on May 14 at 65, Rutland Gate to make arrangements for a garden fête to be held at the Royal Botanical Gardens on July 9 and 10, in aid of the Women's and Children's Welfare Work in Palestine. The fête will be opened by Mr. James de Rothschild.

Lady Ryan, wife of Sir Andrew Ryan, K.B.E., C.M.G., his Majesty's Minister at Jidda, was presented by Mrs. Arthur Henderson at the first Court of the season on May 14.

Lady Newnes will be At Home to-morrow (Friday) at 55, Princes Gate, from 3.30 to 6.30 p.m., in connexion with the Egyptian matinée. Professor Sir Flinders Petrie will speak.

BRITISH SCHOOL OF ARCHÆOLOGY IN IRAQ.

A lecture will be given by Mr. Leonard Woolley, on behalf of the Gertrude Bell Memorial Apeal Fund for the Establishment of a British School of Archæology in Iraq, on June 3 at 8.30 p.m. The lecture, which is entitled "Recent Excavations at Ur" (with lantern illustrations) will be delivered at the Central Hall, Westminster, S.W.1. Tickets (Reserved seats 10s. and 5s.; Unreserved seats 2s.) can be obtained from the Hon. Secretary, Gertrude Bell Memorial Fund, 17, Radnor Place, W.2. or from the Box office, Central Hall, Westminster, S.W.1.

THE LEBANON HOSPITAL.

The thirty-first Annual Meeting of the Lebanon Hospital for Mental Diseases, Asfuriyeh, Beyrout, will be held on May 23, at 3.30 p.m., at St. Martin-in-the-Fields, Trafalgar Square (Vestry Hall, 5, St. Martin's Place). The Chair will be taken by Dr. Bedford Pierce, and the speakers will include Dr. F. H. Edwards, Mr. F. Hourani, and Mrs. Sefton Jones (who has just returned from Syria). The General Secretary of the Hospital in London is Miss Hilda Fox, Lebanon Hospital Committee, 139, Marylebone Road, London, N.W.1.

NEW BULGARIAN CABINET.

The new Bulgarian Cabinet, which was formed on May 15, includes the following Ministers:—

M. Liaptcheff	Prime Minister and Interior.
M. Bouroff	Foreign Affairs.
M. Molloff	Finance.
Professor Tsankoff	Education.
M. Milanoff	Justice.
M. Grigor Vassiloff	Agriculture.
M. Stainoff	Railways.
Professor Danailoff	Public Works.
Professor Michailkoff	Commerce.
General Bakarjieff	War.

The Persian newspapers allege that, as it has been found that the Railway Syndicate, composed of British, American, French, and German firms, has failed to act in accordance with terms of the contract with the Persian Government, the latter, in virtue of the terms of the agreement, it is announced, has annulled the contract.

THE WEEK AT HOME

London, Tuesday Morning.

Protection *the* Issue?

Many shrewd judges are predicting that, before the present year is out, the capital problem of England will have been proved to be—Protection or Free Trade. Unemployment is getting worse—there are 600,000 more out of work than when the present Government took office; and it is thought that, if the unemployed figures reach the 2,000,000 mark, a national decision on the question of tariffs will become urgent.

At the Nottingham by-election, in which there are Conservative, Liberal, and Labour candidates, an attempt is being made to represent Safeguarding as practically the only issue that matters. But even on this question, evidence is very contradictory. The Conservative candidate says that the lace trade with the help of the Safeguarding duty has more than held its own, that employment has remained steady; the Liberal candidate asserts that employment in the lace industry, after five years of Safeguarding, is now less than it was before the imposition of the tariff; and the Labour candidate denounces Safeguarding as mere Protection, which, he says, "the people of this country have consistently rejected."

It is difficult for the layman to choose between these rival views. But at least it is true that no one has suggested that, when the duty is removed, an increase of unemployment will not follow. The argument that the removal of the duty is in the best interests of the country cannot be expected to attract those who will lose their jobs through the repeal. So obvious is this fact that it is even being suggested that for purposes of expediency, Mr. Snowden may rescind his dreaded decree; but it is not easy to see this dogmatic Yorkshireman eating his own calculated and remorseless words.

Mr. John Wheatley.

It is a curious fact that though Mr. John Wheatley, who died last week, had largely slipped from the eminence which he once held in the political life of the country, the significance of the man was felt everywhere—nowhere more than among his political opponents. He was definitely "a man of mark." He had conviction and he had ability. Many men in the House possess the second virtue, very few the first.

Whether he would ever have come back to what is now the "orthodox" Labour view, the view once entertained by almost all the non-Liberal members of the Cabinet, is very doubtful. If that is so, he would always have remained in the wilderness. In any case, Parliament and the nation also, I think, are the poorer without him.

Road Accidents.

The official figures for road accidents in 1929 are alarming, to say the least. For despite attempts at stricter traffic control, the number of deaths, 6,696, increased by 558, and 1929 compared again unfavourably with 1928 in the number of persons injured—170,917, an increase of 6,079. In other words, there was in 1929 in highway accidents an average of nineteen deaths a day, and actually 470 persons were either killed or injured on each day of the year.

This is an appalling figure. But what is the remedy? The number of cars is increasing, and though it may soon reach saturation point, it is at least not likely to fall below the present level. There are those, of course, who say that the pedestrian is largely to blame, but this I doubt. Certainly the motorist is by no means always to blame, but generally he is. It is in driving efficiency, and in that alone, that the remedy can lie.

Meanwhile, for those who desire a really peaceful existence, one may record that the Isles of Scilly had no accidents, that Radnor was the only county in England and Wales to escape fatal accidents, and that Penzance had only one killed. The worst places were the Metropolitan Police district, Lancaster County, and Birmingham. And already London has far exceeded the first quarter's average "crop"; during the last three months, seventy more people have been killed than during the corresponding period in 1929.

Trackless Trams.

In these circumstances, perhaps, unusual attention will be given to a Bill which was recently put before the Lords by London United Tramways for the establishment of trackless trams. This company wants to abandon the tramway tracks along the forty-six miles which it at present serves or dis-serves, and to substitute trackless trolly cars for the present system. It proposes to begin in the area of Wimbledon, Kingston, Tolworth, Hampton, Teddington, and Twickenham.

The obvious advantage of the proposed change is that the new cars, which of course would be steered, would set down passengers at the kerbside, instead of, as at present, in the dangerous middle of the road. It is further claimed that trackless trolley vehicles have quicker acceleration than motor-buses, are more comfortable, and less noisy. Certainly they seem to work well enough in the Provinces.

But, like all changes, this proposed change is being strongly opposed. It is interesting to notice, as an indication of the probable future of the tramways, that the London United Tramways Company has paid no dividend on its ordinary shares since 1907, and none on its Preference shares since 1914.

The Walker Cup.

In the last six years Great Britain has won the Walker Cup but once; this year our defeat by the Americans was terrible in its severity. It is not, as some say, that our fellows played badly; the Americans played considerably better.

It was ironical that the papers should have attempted by their headlines to have suggested that the gallant defeat by Miss Diana Fishwick of the American champion, Miss Glenna Collet, in the Women's Championship, atoned for the laying low of our men; it did nothing of the kind. But it was sensational, thrilling, and extremely interesting. Whereas the tale of our woes in the Walker Cup was merely interesting. Something may be wrong with the way in which we choose our men for the foursomes, but what is chiefly wrong is our golf.

The Test Matches.

Perhaps this disaster at the hands of the American invaders will teach us not to be unduly optimistic over our chances against the Australians in the Tests. Everyone is saying, of course, that the Australians have little bowling outside Grimmett, that their batting has a long tail, that their fielding is far below that of certain other post-War Australian teams. So far, this is mainly true; but wait till the sun shines! I believe, or rather, fear, that there will be a vast difference in Australian form when summer really begins.

Even as it is, enough has been shown of their quality to suggest that we cannot afford to pack our team with the good batsmen we have in abundance and neglect the bowling. It is probable that we can score hundreds of runs against the Australians' attack, but can we prevent their doing the same to us? Even those who saw them all out at Lords on Saturday for less than three hundred will not care to be dogmatic about it.

ALTER EGO.

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

Book Reviews

THE PORTUGUESE IN MOGHAL INDIA.

"JAHANGIR AND THE JESUITS." Arranged and translated by C. H. Payne. (London: George Routledge and Sons, Ltd. 12s. 6d.)

Mr. Payne has here added to the debt which we owe him for his "Akbar and the Jesuits" in the same admirable series of "Broadway Travellers." He has selected, chiefly from the very rare "Relations" of Father Fernao Guerreiro S.J., certain portions which bring out very clearly the methods employed by the Portuguese in spreading Christianity, looking after their own prestige and making money in India over three hundred years ago. When we say "the Portuguese," we naturally find the Jesuit Fathers taking the leading part which, at this period, we are accustomed to finding them take in all the affairs, secular as well as ecclesiastical, of the nation, so that it is very appropriate that the narrators in each case should be members of that Order.

The first part, from which the book takes its name, gives a very vivid picture of life in Delhi and at the Imperial Court, the Emperor with his love of pictures which the good Fathers mistook for Christian piety, his laughing agnosticism and nimble intellect, the constant intrigues and, most interesting of all, the account of the campaign which ended in the capture of his rebellious son, Khusru. Against this we have the optimism of the Fathers and their curious ideas of debate which appear to have led them nowhere, their principle being to contradict flatly all the arguments of their opponents, while stoutly refusing to allow their own propositions to be questioned. No "give and take" for them, in which respect they were typical Portuguese of their generation, a fact which helps us to understand how little footing they ever obtained in India.

The second part is very different. Unless it were so clearly and transparently truthful, one could hardly believe the story of the Brother Benedict Goes. Hearing in the Lahore Bazaars of the marvels of Cathay which was said to be inhabited chiefly by Christians long since cut off from their fellows of the West, the Brother decided that it would be right for him to visit them with a view to comforting them, confirming them in their religion, and bringing news of them to his superiors at Goa and Lisbon. What relation Cathay bore to China he knew not, and of the road to it he also knew but little. He was to know full well the terrible hardships of the almost unbelievable route which he followed, as well as the dangers from fanatical Muslims who, however, seem to have been so greatly impressed by his goodness and meekness that they finally let him alone. At long last he arrived on the confines of China, to die there of illness brought on by his sufferings. He never seems to have known that his Cathay was China and that the Christians he was hoping to find had vanished long ago. He is a splendid example of the piety and courage of his race and singularly free from their overmastering fault of pride. The epilogue, giving an account of his faithful servant's journey to Peking and thence back to India is only a little sketch, but eloquent of the times.

And, last, we come to the extraordinary goings on of Philip de Brito in Pegu, near the modern Rangoon, beginning with the striking success of his entirely piratical and treacherous dealings with his employer, the Raja of Chittagong, his holding his own against the Raja by sheer courage and military skill, his megalomania and the final inevitable disaster. His object in getting possession of and holding Pegu was apparently never, despite protestations to the contrary, a higher one than to levy blackmail on all and sundry shipping in the Bay of Bengal. As usual, there was no real attempt at administration of the country, while law seems to have been an unknown item in the lives of himself and his fellow-ruffians whose only virtues seem to have been an admirable but reckless bravery and great piety. The faithful Fathers accompanied this queer company and converted many of the natives. Indeed, the descendants of their converts are still found in the villages to which they were exiled, where they proudly retain the Faith preached to them by de Brito's priests. It is to these Fathers that we owe the vivid account of this curious historical incident. It is all the more vivid as being almost in journalistic form, being written as events were actually happening, and without knowledge of the coming catastrophe. These soldiers of Portugal were brave as lions; good soldiers and sailors; intensely pious in their own way. But they were lawless and faithless and cared nothing for established government or for orderly settlement. Their short drama at Pegu was typical of the story of the so-called Portuguese Empire of India. It had the seeds of decay in it from the first.

To Mr. Payne we owe the discovery of much of the contents of this book and its piecing together from various sources. To him also we owe the delightful translation and the notes which are all to the point, helpful and clear. All readers will be grateful to him for making it possible for them to read these three stories and will hope for more.

EGYPT AND OXFORD.

"EGYPTIAN PORTRAIT." By C. W. Grundy. (London: Dent & Sons. 7s. 6d.)

This novel attempts to depict the story of an intelligent though poorly-born Egyptian in the successive stages of poverty, education at the hands of Christian mentors in Egypt and later at Oxford, and the subsequent dedication of his life to—Egypt. The author (or authoress?) would appear to know well the city-life of Egypt, and the psychological and physical changes in the life of the "hero," Ahmed Farouki, are clearly drawn. Of the "literary gifts" of the author mentioned by the publishers there is little trace, but the tale undeniably has both movement and colour.

Much of the book is concerned with the love-affairs of the impressionable young Egyptian, and with his reactions to the charms of peasant-girl, waitress, and the like. This aspect of the book is convincing, though scarcely subtle. It is, however, when the author leaves Egypt for Oxford that he becomes a little incredible. One cannot quite believe that after Ahmed Farouki had tried in a rage to murder an English undergraduate, other undergraduates would be found to continue friendship with him. But once away from the dreaming spires and back again to the minarets of Cairo, and Mr. (or Miss) Grundy holds one's interest. Perhaps the chief merit of the novel is the nice proportion kept between sympathy with and criticism of its central figure.

THE PERSIAN ART EXHIBITION.

The Sixteenth Annual Dinner of the Fine Art Trade Guild, held at the May Fair Hotel on May 16, was presided over by the Master, Mr. H. W. Dickins. In the course of a speech proposing the health of "The Guests," Mr. Dickins referred to the Exhibition of Persian Art which is to be held at Burlington House next January and February. He suggested that there might be in that art something which would set a new flame burning among Western artists.

Responding for "The Guests," Sir Denison Ross spoke of this Persian Exhibition. The scheme, he said, was an ambitious one, and those interested had already made considerable progress in their plans during the last six months.

He dared say that to many of his audience the name Persia conveyed quite different meanings, and some among them might possibly not associate Persia with any art in particular: most of them must, he fancied, associate it with poetry, if only because of Omar Khayyam. Some of them might have pictures of oil-fields conjured up by the mention of this name. ("Both"—poetry and oil—"were good.") But the truth was that Persia stood for a great variety of things both in the past and in the present, and he trusted it stood for very great things in the future, under the rule of its present Shah, Riza Pahlavi, who by his military genius and his strong character had made himself the head of the State. Perhaps the names of the earliest kings of Persia were better known to the average Englishman, and certainly to the average English schoolboy, than those of the Middle Ages or of modern times. Cyrus and Darius were names everyone knew, owing mainly to the Bible (which some had read) and to Greek literature (which all knew): they belonged to the old Achæmenian dynasty. The rulers of Persia who controlled her destinies from the third century B.C. down to the conquest of Persia by the arms of Islam at the beginning of the seventh century A.D., the Arsacids and the Sasanians, were not so well known; they nevertheless included some of the greatest monarchs in history. After the conquest of the Muslims, the country for a time lost its identity in the shadow of the brilliant Court of Baghdad, and her Literature and Art might be called rather Saracen than Persian.

In the tenth century came the revival of Persian nationalism, and with it was born a new Persian Literature and a new Persian Art which flourished at its height in the fifteenth and sixteenth centuries, and suffered a serious decline in the eighteenth. Such in brief were the historical periods connected with this great country of Persia, which, thanks to the ramparts of mountains which surrounded it and the striking individuality which characterised its people, had remained practically intact from the earliest times down to the present day, surviving even the frenzied partitioning of kingdoms which coincided with the Great Peace. Moreover, the language found on the inscriptions of Darius was practically the same language as that spoken in Persia to-day.

Now what was going to be shown in this Persian Exhibition? He was unable to read out anything in the shape of a catalogue, and this for two reasons: first, because he did not wish to count their chickens before they were hatched, and secondly, because a special Committee was at present busily engaged in examining and selecting from objects seen, or objects offered. His audience might take it that examples of the earliest specimens of Persian Art would be represented in some form or other, though he regretted that even the great development of aviation would not permit of their bringing even a portion of Persepolis to place in the Courtyard of Burlington House! Among the more modern Arts of Persia, carpets and miniatures would be represented by the finest known examples; pottery, glass, book-covers, armour, and silver work would be included, and the list of those who had kindly consented to send exhibits on loan, quite apart from the English owners of famous collections, was headed by His Majesty the Shah of Persia, the Egyptian Government, and Committees representing the United States, France, Italy, Germany, and other countries. They might ask how the vast expanse of wall-space in the Royal Academy was likely to be fully occupied by this Persian collection. In reply Sir Denison would say that the organisers of the Exhibition foresaw a difficulty rather in selection than in dearth of material to choose from.

They hoped to prepare especially for the Exhibition at least two large-scale models of outstanding buildings of the early Muslim period in Persia. Students of History would also find there maps, historical tables and charts, from which they might obtain a general purview of Persia's great past. It might certainly be claimed that nothing of the kind had ever been attempted before, and, if fortune favoured the Committee, he saw no reason why they should not attract people in their thousands, to come to see the products of a civilisation of which they knew, at present, far too little, and which, from an educational point of view, should be of the deepest interest, while from the artistic point of view, it should not fall short in any way in æsthetic quality of the Exhibitions of European Art which had preceded it in Burlington House.

Those present included:—**Sir Frank Short, Sir John Lavery,** R.A., Sir David Murray, R.A., Sir William Llewellyn (President, Royal Academy), Mr. W. R. M. Lamb (Secretary, Royal Academy), Canon J. C. Morris, Lord St. John of Bletso, Sir D. Y. Cameron, R.A., Mr. Julius Olsson, R.A., Mr. Richard Jack, R.A., Mr. F. W. Chamberlain, Mr. G. F. Rogers, Mr. Edward Shanks, Mr. W. H. Gardner, Captain A. E. Borthwick, Mr. D. E. McGregor, Mr. G. C. E. Matthews, Mr. Martin Hardie (Victoria and Albert Museum), Professor Malcolm Osborne, Mr. William Walcot, Mr. J. B. Dunn, Mr. A. C. Dickins, Mr. J. F. E. Grundy, Mr. L. W. Vicars, Mr. A. P. Iliffe, Mr. T. E. Revell, and Mr. E. Cronier.

Mohamed Pasha Sidky, Egyptian Foreign Minister of Public Works in Ziwar Pasha's Cabinet, died in Cairo on May 15. His funeral in the afternoon was attended by a representative of King Fuad.

"Palestine Day" was observed throughout Palestine on May 16. Arab shops were closed and many children took a holiday from school.

Arif Oruj Bey, Editor of the *Yarin*, was on May 17 sentenced to 35 days' imprisonment. As he had been in custody over a month, he was released immediately. His correspondent in Angora was sentenced to three years' hard labour for offences under the Press laws.

On May 15 sentence was passed in Jerusalem on the four Arabs charged with the murder of 24 Jews in the Slonim house during the Hebron massacre in August last. Two were condemned to death, one to seven years' imprisonment, and the fourth was acquitted, as it was proved that he was at the time elsewhere engaged in committing a murder for which he had already been condemned to death.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Next Greek Loan.

Suggestions have been made that a new Greek loan would be forthcoming before very long, but I am able to state definitely that there is no possibility of one before next year. Greece has obtained the finance she requires for the time being from banks in this country and the United States, at a rate of interest which reflects the good position of Greek credit in the world markets. The fact that Greece has always met her obligations is a great asset, and a further important factor in her favour is the steady progress which has been made under the present Prime Minister, M. Venizelos. When the schemes of development in progress or under consideration have been carried out the economic position of Greece will be enormously improved. When the time comes for the issue of a loan these factors will have their due effect on the terms and on the response that will be forthcoming from the investing public.

Persian Currency Changes.

The Imperial Bank of Persia has the exclusive right of issuing and circulating in Persia notes to bearer payable on presentation. The Persian Government recently enacted a law providing for the establishment of a gold standard in Persia, and also a law regulating transactions in foreign exchange. By the former law it is provided, as already recorded in these columns, that the present silver kran currency shall be withdrawn and replaced by a new unit to be called the ryal which will be based on a gold value. In order effectively to carry out the currency reforms the Persian Government deemed it essential that they should be at liberty to issue their own bank notes, and they accordingly invited the Imperial Bank of Persia to negotiate with them for the relinquishment of its exclusive right to issue notes. The negotiations have now been concluded. In consideration of the sum of £200,000 sterling payable by the Persian Government to the bank on March 20, 1931 (when the withdrawal of notes issued by the bank is to begin), the Board have agreed to relinquish the rights of the bank under Article 3 of the concession. The Persian Government on their part have agreed to cancel the obligation of the bank to pay royality on its profits, and also to abolish the office of Imperial High Commissary created by Article 4 of the concession. Further, the Persian Government have emphasised their satisfaction at the bank's willingness to co-operate by granting to it facilities under the Regulation of Exchange Act, and certain other privileges. This agreement is subject to ratification by the Majliss.

Suez Canal Revenue.

The past year was again a very satisfactory period for the Suez Canal Company. The traffic receipts amounted to 1,116,413,458 francs, as compared with 1,079,393,586 francs for the previous year, the total revenue from all sources being 1,189,958,441 francs, an increase of 22,846,353. It is proposed to pay a dividend of 530 francs, tax free, on the Ordinary shares, as against 510 francs, and one of 609.59, tax free, on the Founders' shares, as against 584.64. The traffic receipts were the highest on record, and in accordance with their policy the Board have decided on a further reduction of the Canal dues as from September 1 next of 25 centimes, making the dues 6.65 gold francs for vessels carrying freight, while ships in ballast will from September 1 pay only 50 per cent. of the dues paid by ships with cargo; in other words, 3.32½ gold francs. Previously they paid at the rate of 2.50 gold francs below the dues on ships carrying freight. The traffic through the Suez Canal is one of the important indications as to the world trade position. In the first three months of the year there was a decline in the traffic receipts, and the view is taken that there may be a further falling off in the traffic before the commercial revival sets in.

Oil Profits.

Excellent dividend declarations have been forthcoming in the past week from the Burmah Oil Company and the Shell Transport and Trading Company. The results of the Burmah Oil Company are the best yet obtained by this great undertaking. After providing £528,456 for depreciation as against £381,735, a net profit is shown of £3,437,472 as compared with £1,479,626. It is proposed to allocate £500,000 to writing down investments in subsidary companies, to place £500,000 to the general reserve as against £200,000, and to maintain the allocation to field expenditure equalization reserve at £150,000 and that to the insurance reserve at £20,000. A final dividend is proposed of 20 per cent. as against 10 per cent., making the distribution for the year 30 per cent. as against 20 per cent. for the two previous years, bringing it again to the rate paid in 1926. The rate was in excess of market anticipations, and the result was naturally a sharp advance in the shares. One important factor con-

tributing to the improved results obtained by the Burmah Oil Company was the freedom from the rate cutting war in India; another was the considerably larger return on the company's holding of Anglo-Persian shares. The dividend declared by the Shell Transport and Trading Company is 15 per cent., bringing the distribution for the year up to 25 per cent. tax free. This is the same rate as before, but it is now paid on a considerably larger capital, as there was an issue of £4,000,000 in Ordinary shares in January of last year, so that the maintenance of the distribution means the payment of an additional £1,000,000.

Anglo-Egyptian Results.

The report of the Anglo-Egyptian Oilfields has also been forthcoming, and in the case of this company also excellent results have been obtained. The net production of crude oil for the year amounted to 267,244 tons as against 264,234 tons. A new sand was struck in the eastern extension of the field in November, yielding a flowing production of water-free oil, while six new wells were completed at Hurgada, all of which were producers. The gross profits totalled £848,245 as against £819,989, while the net profits, after providing for all charges, including depreciation, amounted to £449,806 as against £424,266. The balance brought forward of £250,190 makes the available total £699,996, from which £30,561 is placed to the exploration reserve, making that fund again £100,000. The dividend on the "B" shares is maintained at 22½ per cent., leaving £207,280 to be carried forward as against £250,190.

The New India Loan.

Another loan for the Government of India was forthcoming this week. The issue consisted of £7,000,000 Six per Cent. bonds at the price of 99 per cent. It is a short term issue, the bonds being repayable at par on June 15, 1935, subject to the exercise by the Secretary of State, on three months notice, of the right to repay at par on or after June 15, 1933. The proceeds of the loan will be used for general purposes and to provide funds for capital expenditure on the railways. Naturally it is chiefly for the railways that the loan is required. The stock is a trustee investment. The last issue of the Government of India was made three months ago, and took the form of £6,000,000 Six per Cent. Bonds at the price of 99 per cent., repayable at par in 1932 or at the option of the borrower at 101 in 1933. This issue was subscribed several times over, but in view of the change in the general outlook it is not to be anticipated that there will be so good a result on this occasion. The flat yield of the new bonds is £6 1s. 3d., the redemption yield being £6 4s. 9d. A yield of this character is, of course, exceptionally high in the case of a Government security, and it indicates the effect on India's credit of recent events. The financial position of the country leaves little to be desired, and in normal circumstances it would have been possible to issue the loan at a much lower rate.

THE OUTLOOK IN AFGHANISTAN.

Afghanistan's trade with foreign countries in 1929 was very largely suspended owing to disturbed conditions in the country, which made the transportation of merchandise too risky for most merchants to undertake (says an American Consular Report). The main trade routes from India, the country with which Afghanistan carries on the greater part of its foreign trade, are by way of Peshawar to Kabul through the Khyber Pass in the east and from Chaman to Kandahar in the southern part of the country.

Before the recent disturbances camel trains were rapidly giving way to motor transport, although in 1928 as many as 3,000 pack animals per day were bringing fruits to Kandahar, a rich fruit-growing section, to the railhead at Chaman for distribution through northern India. The road from Chaman to Kandahar is about 80 miles in length, and while in very poor condition, motor transportation was beginning to be used to a considerable extent. Trucks also were carrying goods over the 210 miles of road from Peshawar to Kabul, and an increasing number of passenger cars were being used for the transportation of travellers. Although this road was very poor, improvements were beginning to be made. The extension of motor traffic on these lanes of commerce promised a slowly expanding market for motor vehicles, but the civil disturbance of 1929, which dethroned King Amanullah, put an abrupt halt to such development. Postal services ceased, telegraphic and telephonic communications were destroyed, trade routes became dangerous and caravans passing through tribal areas were looted or forced to pay heavy toll. Motor vehicles within the country were commandeered for military purposes and supplies of gasoline became very low.

Merchants suffered heavily during this period, and, as a result, the volume of foreign trade fell to about one-fourth that of 1928.

Order is gradually being restored by the new king, Muhammed Nadir Shah, who has been on the throne less than six months. Much progress has been made in organising the Government and making its authority felt throughout the country. He has announced a programme of development which includes construction of roads, the fostering of means of transport, promotion of agriculture and fruit growing, exploration of the country's mineral resources, and the establishment of friendly relations with foreign countries. While the country is settling down to normal conditions, the severe winter has prevented any trade activity up to the present. Unquestionably, the country is in great need of many manufactured products, and, if conditions permit, it is likely that a brisk trade may commence as soon as caravan routes are opened in the spring.

More earthquake shocks were felt on May 15 in the districts of Northern Persia which were devastated by earthquakes the previous week.

The crude oil output of the Roumanian fields during the first quarter of the year amounted to 1,361,114 tons, as compared with 1,094,706 tons in the first quarter of last year, an increase of 266,408 tons. The production of the principal companies was as follows (in tons):—Astra Romana, 175,870; Steaua Romana, 199,045; Creditul Minier, 172,697; Phœnix Oil, 140,986; Sirius, 96,602; Rom.-Americana, 90,436; I.R.D.P., 58,925; Colombia, 48,604; Concordia, 33,684; Petrolul Rom., 33,436; Sandajul, 29,417; Foraky Rom., 24,580; and Prahova, 22,720.

EMPIRE COTTON PRODUCTION IN 1929.

The annual report of the British Cotton Growing Association gives an encouraging picture of the development of Empire cotton cultivation in 1929, the increase in production, it is pointed out, being "remarkable in face of the fact that conditions in the cotton trade have continued to be unsatisfactory." We give the following extracts from the report:—

There are now ample supplies of Empire and other outside growths of cotton, and with the deterioration of the quality of the American crop, these cottons are becoming more popular amongst spinners, not only in this country, but on the Continent. The cotton trade is gradually coming to realise the importance of Empire and outside growths of cotton, and the increase in production is already having an effect upon the price for American and Egyptian. Empire and other miscellaneous growths can now be purchased on a reasonable basis in comparison with American, and given normal trade conditions there is no doubt that spinners will use them more extensively in the future, as supplies can now be obtained throughout the year. Under the conditions of trade which have prevailed during 1929 it is not surprising that there has been some falling off in demand. For the twelve months ended July 31, 1929, the spot sales of American cotton in Liverpool were 996,770 bales, as compared with 1,227,310 bales for the year ended July 31, 1928, or a decrease of nearly 19 per cent. The spot sales in Liverpool of Empire and outside growths during the year ended July 31 last, amounted to 569,970 bales, which compares with 642,690 bales to July 31, 1928.

The total number of bales and the value of the cotton which has been dealt with by the Association during the last six years is as follows:—

Year	Bales	Value £
1924	59,583 ...	1,922,097
1925	84,320 ...	2,502,967
1926	135,522 ...	3,368,740
1927	171,600 ...	5,012,084
1928	124,182 ...	4,160,049
1929	124,790 ...	3,683,567

As was mentioned in the last report the Association's policy of providing ample ginning facilities ahead of requirements has resulted in a temporary lull in the calls made upon the resources of the engineering department for the provision of new plant. For various reasons the ginneries erected during 1924-1926 are not yet employed to the limits of their capacity, and in West Africa particularly during the present season it has been found desirable to concentrate on certain plants with a view to conserving the staff. The engineering staff at head office are thus in a position to give immediate attention to any requirements which may mature. It is of interest to note that the air blast type of gin installed at two ginneries in Northern Nigeria and one in the Punjab, continue to give every satisfaction, not only as regards output, but in the small quantity of spares required.

Technical assistance and advice are freely given to inquirers, which, although being well within the sphere of the Association's activities, does not directly reflect in the figures of turnover. Large quantities of parts for renewals and materials for baling purposes have been supplied during the year to ginners, planters and others engaged in the cultivation of cotton, the value of which during the year amounted to £54,799, as compared with £52,164 in 1928, £58,909 in 1927, while in 1926 the value was £143,108.

The commission earned during 1929 on sales of cotton and cotton seed, and on supplies of stores, amounted to £19,711, which compares with £20,968 in 1928, and £30,525 in 1927. Bank and other interest, including interest on money advanced for financing cotton, etc., amounted to £13,869 10s. 9d., against £10,072 11s. 10d. in 1928. Receipts for dividends on shares in cotton growing companies were £6,666 against £6,988 in 1928. After making provision for depreciation and for income tax, the accounts show a net profit for the year of £34,940 14s., which brings the excess of income over expenditure to £475,633 0s. 3d.

The following extracts are taken from reports dealing with progress in the various cotton growing regions:—

India.

Climatic conditions in the Punjab during the year varied from the normal, in that very heavy rains fell during July and August, and that severe frosts were experienced at the end of January and beginning of February. The recorded rainfall at the Khanewal Farm for the year was 21.06 inches as compared with the average of about six inches. The summer rains did a fair amount of damage to the mud huts of farm tenants but no serious damage was done to the crops except grams and that portion of the sugar-cane crop which had not been harvested.

The crop germinated well on all farms except some of the newly developed lands in Nili Bar. The "white-fly" pest of cotton was carefully watched throughout the year. The first white-flies were seen when the earliest plants were three or four inches high in the month of May. The pest increased at a very fast rate and by the middle of July the infestation was exceptionally on all varieties. There were strong indications at the time that the yield and quality of the cotton crop would be as bad if no worse than experienced during the past three years of diseased crop. Fortunately the heavy rains of July and August resulted in the destruction of most of the matured white-flies. As a result all varieties improved considerably, and it is satisfactory to be able to report that though the yields obtained last year are appreciably lower than those recorded in the non-disease years, the final yields are appreciably higher than during the previous three years. It has been found that American varieties are less susceptible to the effects of white-fly when sown late and this practice is now adopted on all the company's farms. The *desi* (indigenous) varieties, being less susceptible to white-fly attack, are sown first. The earlier experimental evidence of the ready response of diseased plants to late manuring with nitrogenous manures have been confirmed, and it is probable that this practice will be adopted on a commercial scale next season.

The cultivation of 4F variety of Punjab-American,

BANQUE MISR (S.A.E.)

Capital L.E.1,000,000 (Fully Paid) - Reserve L.E.615,453

HEAD OFFICE: CAIRO.

Branches and Offices all over Egypt. Correspondents all over the World.

Affiliated Bank in France: Banque Misr (France), Paris, 103, Rue des Petits-Champs and 24, Place Vendome.

The BANQUE MISR has the widest connection with Egyptians. For your trade with Egypt you need the services of a leading Bank; you need the services of our Bank.

which comprises the greater portion of the American type grown in the Punjab, has been discontinued at the Khanewal Demonstration Farm as well as on most of the other farms managed by the company. During the past year the 289F variety has proved its superiority over all other varieties on practically all farms in virtue of the premium offered for this quality coupled with its relative yielding capacity. About 200 acres of cotton were especially allotted for experimental purposes in testing cotton varieties, and in manurial and other experiments including those undertaken by the Cotton Research Botanist. Sixty selections made by the company's staff from the 289F commercial crop and also some imported varieties were tested. Some of the new selections show considerable promise and they will be propagated at as fast a rate as possible. A system of pure seed supply to meet full requirements of the company as well as those of other land holders and of the Department of Agriculture has been adopted.

Good progress has been made during the year in developing the 18,000 acres of land in the Nili Bar Colony, temporarily leased from the Government, and also in the development of the 10,000 acres of land at Dipalpur reserved by the Government for afforestation by irrigation. Most of these new areas were covered with dense jungle at the time the leases were granted in the autumn of 1928. By the time water was expected to arrive in the summer of 1929 practically the whole of these areas were cleared of jungle and all tree stumps uprooted by manual labour. At the peak of the season as many as 2,500 labourers were engaged on this work on contract. The land has since all been levelled, water courses completed, and such areas as were reserved for summer crops were ploughed in season. On two of the non-perennial plantations in Nili Bar, having an area of 6,500 acres, brick wells have been sunk to command blocks of 100 acres each, and fitted with the most modern Persian wheel worked by bullock power. This arrangement ensures a supplementary supply of water at times of scarcity in the summer months and the sole source of water supply during the winter months when the canals are closed. The greater portion of the land is of high natural fertility and heavy crops are anticipated. During the past year, at the inception of the irrigation system in the Nili Bar, relatively high average yields of cotton were obtained in spite of continued shortage of water supply in the canals. The disastrous collapse of Palla Head Works on the Sutlej River fortunately did not adversely affect the lands managed by the company.

The Sudan.

The crop in the Gezira amounted to 466,169 kantars, compared with 347,402 kantars for the previous season, the average yield being 3.54 kantars per feddan, against an average yield of 3.29 kantars for the previous year. The cotton was of very good quality, both in grade and staple, and was highly approved by spinners of fine Sakellaridis. For the 1929-30 season the area under cotton in the Gezira is 158,585 feddans. The extraordinarily heavy rains, which lasted into October, have made this season's planting a very difficult one, and much re-sowing had to be done repeatedly, which means that the crop will be a late one. Development and canalisation work was started on the new northern extension, and it was hoped to complete before July, 1930, the development of about 40,000 feddans, which will add during the 1930-31 season a further 13,000 feddans to the present area under cotton.

The boundaries of the new concession in the Gezira belonging to the Kassala Cotton Company, Ltd., have been fixed in agreement with the Sudan Government, and contain approximately 46,600 feddans of cultivable land. Allotment of the land to tenants has been made in collaboration with the authorities of the Sudan Government, involving the settling into their individual holdings of some 1,500 families of native tenants. Approximately 15,500 feddans of this area was planted with cotton during the autumn of 1929, and the crop was promising well. The rapid development of this large new area is a remarkable achievement, and great credit is due to the Sudan Government for the whole-hearted efforts of their Irrigation Department and contractors, to the Sudan Plantations Syndicate, Ltd., without whose co-operation the work could not possibly have been carried out so expeditiously and economically, and to Mr. Fleming, the Manager, and the other officials of the Kassala Cotton Company, Ltd.

The cotton crop in the Gash Delta was again exceedingly good, and the quality was excellent. The effective area cultivated with cotton was 28,537 feddans, and the yield about 71,000 kantars, which compares with 65,568 kantars from approximately 25,800 feddans for the previous season. The Gash ran for 92 days from June 20 to September 20, and it is evident that the total area watered each year depends more upon the period of uninterrupted high flood than on the volume of water arriving during the season. Progress has been made during the year with new works for the better distribution of flood water, and with the construction of training spurs in the neighbourhood of Kassala. In the Tokar area of the Red Sea Province the 1928 flood was of exceptional volume, and the effective area planted with cotton in the 1928-29 season was 50,000 feddans, which yielded a crop of 46,606 kantars.

With regard to the rain-grown cotton in the southern area of the Sudan, the Government continues to provide the seed, supervise the cultivation and purchase the crop when picked, and arrange for the ginning and marketing of the cotton. Apart from the Nuba Mountain Province, where the cultivation of cotton has become more established, the industry is not developing in the manner anticipated a few years ago, but a great deal of valuable experience has been gained, and it will now be possible to concentrate on those areas which show the best prospects of development.

The total production of cotton during the year in the Sudan constituted a record and amounted to 591,308

BANQUE FRANCO-BELGE ET BALKANIQUE
Joint Stock Company
Capital - Leva 150,000,000 fully paid up.

kantars of irrigated Sakellaridis, 55,132 kantars of irrigated American, and 37,620 kantars of rain-grown American, being the equivalent of about 170,000 bales of 400 lb. each.

Iraq.

The confident prediction for a bumper crop for 1929 exceeding all previous crops, has not been fulfilled. Estimates ran as high as 10,000 bales, and it is disappointing that the actual crop fell far short of this, the season's output totalling only 4,600 bales, against 5,200 bales for 1928. Expectations were well founded, for the seed issued was double that of 1928 and the area planted showed an increase of at least fifty per cent., but at the time the cotton was planted and for the first two months of the growth the whole country was invaded by locusts. The direct damage was not great, but the cultivators were much afraid and failed to thin out the plants, believing that an unthinned crop would be more likely to withstand the depredations of the locusts. By the time the risk had passed it was too late for successful thinning. During the flood season the river Tigris maintained an abnormal level for a much longer period than usual, with the result that the submerged pumps could not give the initial irrigation when it was due. A few plantations were inundated, but the indirect damage was greater since labour was called away to do flood protection work when it should have been occupied with cotton.

The previous mild winter had allowed insect pests, particularly the spotted boll-worm, to hibernate successfully, with the result that there was an early and intense attack. The month of June was abnormally windless and this encouraged both boll-worm and aphis, and finally white fly, not previously noticed as a serious pest, contributed to the damage. This unfortunate series of disastrous events resulted in a greatly decreased yield per acre and a consequent poor crop. Over 90 per cent. of the crop was grown on plantations irrigated by pumping engines, and many additional plants are being installed in preparation for 1930. There are now over two thousand pumping sets in Iraq, of which 332 with an average horsepower of 37 were installed in 1929. Cotton cultivation in the Mosul area continues to increase in spite of the difficulties of transport, although the area as yet is not important.

The whole of the Iraq cotton crop was ginned and baled by the Association; all cotton coming directly into their hands is also graded and classified. Under Iraqi auspices a new National Co-operative Ginnery has now been erected, but was not completed in time to deal with any of the 1929 crop. The control and distribution of cotton seed, which is a duty left to the Association, has been carried out satisfactorily. Notwithstanding the serious setback in production, the applications for planting seed for the coming season exceed those of last year.

With the increased adoption of pumps, the problem of watering and irrigation of lands becomes yearly less difficult, but the locust peril is always present and is a constant menace to the cultivator. It is therefore hazardous to venture on any prediction as to the size of the crop.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

SPECIAL NOTICE. New S. S. CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Locomotives and Wagons.—The Director-General, Main Drainage Department, No. 2, Sharia El Malcka Nazli, Cairo, invites tenders for the supply of 2 light railway heavy oil 10 B.H.P. locomotives and 30 wagons each of 750 litres capacity. July 1.

Electric Generating Unit.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection at Tor Quarantine (on the Gulf of Suez, Egypt) of one cold starting 40 k.w. electric generating unit, three electric motors, overhead transmission lines, and electric lighting round the camp. The contract includes all building work for engine, dynamo, and motor foundations. June 30.

Pumping Units.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of three pumping units each consisting of a pump giving one metre cube per second against a static head of 1.80 metres, belt driven, or directly coupled to an internal combustion engine at Alag (near El-Marg). The installation includes all necessary auxiliaries and the building work of the pump houses, etc. June 16.

THE SUDAN.

Housing and Steel Shedding.—The Inspector-General, Egyptian Irrigation Department, Khartoum, Sudan, invites tenders for the construction of housing at Gordon's tree dockyard near Khartoum (July 15); and for the supply and erection of steel shedding at Gordon's tree dockyard, near Khartoum. July 15.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, May 30). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, May 31); s.s. Manipur for Calcutta (Birkenhead, June 12).

Bibby Line.—S.s. Yorkshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 28).

British India Line.—S.s. Hatipara for Bombay (London, May 31); s.s. Mulbera for Colombo, Madras, and Calcutta (London, May 31); s.s. Matiana for Port Sudan, Aden, and East African ports (London, June 6).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, June 7; Swansea June 10); s.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, June 11; Liverpool and Swansea, June 13).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 31); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 24).

P. and O. Line.—S.s. Padua for Calcutta (London, June 6); s.s. Malwa for Bombay (London, June 6); s.s. Bhutan for Calcutta (London, June 20); s.s. Rawalpindi for Bombay (London, June 20).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, June 4); s.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, June 11).

Ellerman and Papayanni Lines.—S.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, May 24; Swansea, May 29); s.s. Voluturno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 30); A steamer for Gibraltar*, Algiers*, Oran*, Syra*, Smyrna, and Constantinople (Liverpool, May 31); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, June 3); s.s. Maronian* for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Swansea, June 18); s.s. Manchurian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 5; Swansea*, July 5). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 20.

One great question is being asked by business men all over the world to-day, and it is one of supreme importance to the investor: "Is the end of the slump in commodity prices near at hand?" If it is, then, as Mr. Snowden said in his speech to the bankers on Wednesday, we may look for a rapid trade recovery. Unfortunately the grounds for supposing that the end is in sight are not yet as solid as one could wish, and it would not be wise for investors or anyone else to count upon any real upward turn this summer.

The past week has been full of interest, but there is little of good augury for investors. The British trade returns were definitely poor and unemployment is rising. Cheap money exists, it is true; but funds available for supporting the investment markets are to a considerable extent hanging back for want of confidence or being absorbed by a glut of new gilt-edged issues. The new issue market is suffering from acute indigestion, and the big Reparations Loan is still to come. Meanwhile we are getting into summer. Best Wall Street authorities are predicting a fairly idle summer in American Stock Markets, and the same prophecy may reasonably be applied to London.

Home Rails.

The stocks of the British railway companies continue in a state of depression for which the general dulness cannot be held solely responsible. Undeniably the weekly traffic returns for the year to date have not been cheering. Traffic receipts for the four main lines for the first nineteen weeks of the year were all below the corresponding 1929 figures—the declines ranging from £83,000 in the case of the L.M.S.R. to £20,000 for the Southern. It should not be forgotten, however, that these are gross figures, and there is the possibility that further economies have been effected in working expenses, which will mitigate any decline in the net receipts. Moreover, the companies should begin to enjoy the fruits of their activities in acquiring interests in road transport companies. These interests now virtually cover the whole country. Freed from the burden of competition with the railway companies local transport companies should prove increasingly profitable. One of the most prominent, the Southdown, published last Wednesday its accounts for 1929-30, which showed gross revenue at £700,116 against £600,656 and a net profit of £61,483, compared with £52,154. The Southern Railway's large purchase of shares in this company should therefore soon prove well-justified. While it would be unwise to look for any spectacular advance in Home Rails, in view of the situation in the Stock Markets and in trade generally alike, their stocks remain of higher investment standing than the yields obtainable would suggest. L.M.S.R. 4 per cent. first preference can be bought to yield about £5 12s. per cent., while among the junior stocks Southern deferred return £8 per cent.

Whisky Profits.

Shareholders of the Distillers Company who may have been discouraged by the lower profits of Walker and also of W. P. Lowrie (although both these subsidiaries maintained their dividends) can now find encouragement in the increased profit announced by Buchanan-Dewar, one of the largest members of the Distillers group. The accounts for the year ended March 31 last show Buchanan-Dewar's net profit to have been £1,367,248, compared with £1,226,175 for the year before. With this increased profit the ordinary dividend was also raised and was paid at 35 per cent. compared with 30 per cent. in 1928-29 and 28 per cent. the year before that. The carry forward, too, at £106,598 shows a small increase. The reserve fund remains unchanged at £750,000. Investments in constituent companies are again given at £4,103,072. John Walker's accounts, covering the same period showed net profit at £647,365 as against a higher profit of £744,917 for the preceding year. However, the Buchanan-Dewar results show that the distilling industry during the past year has had a fair share of good trade and the results of the combine embracing the bulk of the trade, the Distiller's Company, may be awaited with confidence. The ordinary shares now yielding about £5 19s. per cent. can still remain favourites among investors.

Investment in Preference Shares.

Preference shares form a class of investment which has been rather out of favour for some time past. This is reflected in the fact that, with the exception of last year, when conditions were quite abnormal, the average rate of interest offered on new capital of this class has been rising for some years, and the proportion of capital raised in this form has fallen. There are some who hold that preference shares are neither fish, fowl nor good red herring—they offer neither the assured income of a debenture nor the chances of rising dividends and capital appreciation of the ordinary share. There is a certain amount of truth in this contention—and it accounts for the fact that, generally speaking, preference shares are the highest yielding class of security. But a certain amount of risk is inevitable in any investment in an industrial concern, and the yields obtainable on preference shares naturally vary with the standing of the concern in question and the consequent risk. A preference issue in a really first-class company can often be bought to return about £5 15s. or £6 per cent., and in such cases the risk is very small. Hence such securities have their attractions for many investors.

The ceremony of handing over to the authorities the Parthenón as restored by M. Balanos took place on May 17 on the Acropolis.

Mr. James Mackenzie, Chairman of the Assam Railways and Trading Company, has joined the board of the Anglo-Siam Corporation.

ECONOMIC CONDITIONS IN BULGARIA.

[*The following notes are taken from the bulletin of the British Chamber of Commerce (of Bulgaria), dated April 30.*]

General Conditions.

Business throughout the country during the early part of the month continued to be slack. The monetary position, as pointed out in previous issues remains unaltered. Banks continued to be cautious in their operations, and credits were only granted on most sound securities. Imports further diminished, and the March trade balance has shown a surplus of exports over imports.

Local trade during the ten days preceding Easter slightly improved. There was, however, a big decline in the turnover from Easter trade, in almost every branch of commerce, as compared with last year. The drop in peasant purchases was particularly noticeable. This temporary recovery enabled merchants to dispose of a considerable quantity of surplus stocks which they have had on their hands since the beginning of the year. Textiles, cotton piece-goods and yarns were in better demand. Leather products, metals, ironware, and chemicals continued to be inactive. Tobacco sales showed but a slight improvement. Industries continued to curtail their orders for raw materials from abroad. This will enable manufacturers carying large surplus stocks of raw materials gradually to reduce them and contribute towards stabilising their economic position.

The statement made by the Minister of Finance, on the economic position of the country, when introducing the new Budget in the National Assembly has had a good effect in financial and commercial circles.

The Rose Oil Industry.

One of the oldest and exclusive industries to which Bulgaria can lay claim is its rose oil industry, which produces a perfume and is the basis of many of the perfumes manufactured in Europe. The valley of roses, situated 60 kilometres west of the city of Philippopolis and skirting the foothills of the Balkan range of mountains from the town of Klissoura on the north to the old historical towns of Kazenlik and Stara Zagora in the south, has a superficial area of rose gardens of 7,605 hectares. This area produces 104,000 quintals of flowers, which when distilled give 606,621 muskels (each containing 5 grammes of rose essence).

This was a most flourishing industry prior to the wars, and played an important rôle in the exports. During the wars, however, a number of the rose gardens were neglected, due to the absence of labour, and were visited by parasites, which destroyed large areas of richly scented rose bushes.

With the introduction of the co-operative movement in Bulgaria after the Great War, the industry gradually revived and now 14 different co-operative societies are engaged in the growing of roses and the distillation of their products. During the last five years, several modern distillation plants have been erected at various centres in the valley and a large number of the old primitive distillation plants have disappeared. The rose industry has but a life of from 15 to 20 days each year, from the time the roses are ready for gathering. In this period all distillation must be completed or otherwise the perfume fades and the roses wither.

The Vineyards.

The favourable climatic conditions, especially in south Bulgaria, have enabled vineyard cultivation to develop extensively, yielding a variety of grapes both suitable for table use and the making of a good quality of wines, several qualities of which are now being consumed in European countries. Since 1920 particular attention has been given to this culture, and several new varieties of vines have been imported. These are now bearing fruit and as a result of the modern methods adopted for the preparation of wines, several excellent high-grade wines are being produced for the foreign markets.

Banking Amalgamations.

As reported in the March issue of this Bulletin, further amalgamations have taken place among provincial banking institutions. The Banque de Commerce de Tirnovo and the Banque de Credit, Tirnovo, have amalgamated under the name "Banque de Credit et de Commerce, de Tirnovo." The latest move in this direction in the capital is for the amalgamation of the 24 Popular Banks, which are the credit issuing institutions of the Central Co-operative Bank, have branches in a number of cities, towns, and villages, and operate for the account of the numerous co-operative societies with sums running into milliards of leva. The capital and reserves of the Popular Banks are over 500,000,000 leva.

Miscellaneous.

During the month of March, the value of exports totalled 560,000,000 leva, and imports 300,000,000 leva, or a surplus in exports of 210,000,000 leva. The January and February trade returns also showed a favourable trade balance. This is mainly accounted for by the heavy drop in orders placed by merchants for foreign goods and raw materials.

From statistics published by the National Labour Insurance Bureau, on February 1 there were 51,036 people employed in the various industrial institutions, etc., in the country, as compared with 50,873 on January 1: 8,430 were employed in mines, 1,265 in quarries, 14,172 leather industry, 678 woodworking and cabinet making factories, 2,230 metal industry, 603 textile and cloth factories.

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

THE LONDON CHAMBER OF COMMERCE.

At the meeting of the Council of the London Chamber of Commerce on May 13, Sir Alexander Gibb, G.B.E., C.B., Sir Geoffrey Clarke, C.S.I., O.B.E., and Mr. S. H. Cotton were re-elected Chairman and Deputy-Chairman of the Council, and Treasurer respectively for the ensuing year. Sir Alexander Gibb is actively connected with some of the most important transport undertakings. He is one of the most eminent civil engineers in the country and is intimately associated with important civil engineering works all over the world. He is technical adviser and consulting engineer to various foreign Governments and also to the British Government for the construction of the Singapore base and other projects. Sir Geoffrey Clarke is Joint Managing Director of the Telegraph Construction and Maintenance Company, and a Director of the P. and O. and British India Steam Navigation Company. Prior to his entering business Sir Geoffrey had a highly successful career in India, being Director-General of Posts and Telegraphs since 1918. Mr. S. H. Cotton is Senior Partner of Messrs. Culverwell, Brooks and Co., hide, skin and fur brokers.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended May 10.

Grain.—The better tone which characterised the maize market at the end of last week, unfortunately proved to be a mere "flash in the pan," as things fell back into their previous state of almost complete inactivity, which gradually degenerated into stagnation. A few parcels of maize were sold for Ireland at the beginning of the week, and efforts are being made to conclude further parcels. Stocks of grain, so far from being replenished, are on the contrary dwindling, and it would appear that peasants have made up their minds to hold on to their grain until the new crop is nearer at hand rather than part with it at the low prices now ruling. In the circumstances the freight market was almost lifeless. Spot steamers are, therefore, meeting with great difficulty in getting cargo together and, by the look of things, are likely to experience serious delay before their loading is completed unless extremely low cuts in the rates of freight are resorted to. Two steamers of about 5,000 tons each have been fixed at 13s. 9d. Antwerp Rotterdam, 14s. 3d. Antwerp/Hamburg range. The situation at Constantza is similar to that on the Danube, and there are several steamers seeking cargo.

Timber.—The situation on our market is stationary, the demand being limited to small quantities for Greece, Syria, Palestine and Italy. Inquiries which came forward for North France and British ports do not appear to have materialised. Freights are unchanged.

Weather and crops.—The weather up to Friday was changeable, occasionally stormy and with considerable variations in temperature, but on the whole warmer than the previous week. It has generally been dry, but showers have been reported from most districts and the barometer gives promise of more rain. A Government report, up to May 5, confirms that during the latter part of April the weather was changeable and cool and abundant rain fell throughout the country, accompanied occasionally by hail which, however, did not cause any appreciable damage, except in a few places. It also mentions that owing to the absence of strong frost during last winter and the presence of sufficient moisture in the soil, the autumn sowings have developed under exceptionally favourable conditions and vegetation is very advanced, the situation being equally satisfactory in all parts of the country; it further states that spring sowings have also been effected in favourable circumstances and the area under cultivation, particulars of which are now being gathered, will certainly exceed the average of the last five years. Swarms of locusts are reported in three counties and beetles in one – but measures are being taken to combat these plagues.

Sulina.—The 24 feet depth at the bar is still maintained, but as the flood in the river is increasing, prospects remain uncertain. The Danube Commission have started the extension of the north pier. Fascine mattresses are being made and sunk, and as there is plenty of stone available rapid progress should be made presuming the proposed loan has now been definitely arranged. The minimum depth of water in the river remains unchanged at 24 feet.

Constantza.—This week about 4,500 tons of grain arrived; 8,500 tons were cleared for German ports, and a few hundred tons to the Mediterranean. Two vessels are loading at the elevators for Continental ports at time of writing and several are on turn for the same range. Thirteen vessels loaded over 51,000 tons petroleum products and three took oil fuel for bunkers.

Bulgarian Report.

Bourgas, May 3.—The continued depression on consuming markets prevented any fresh business. The weather has been changeable, mostly cloudy, and occasional showers are reported in most parts. The condition of the crops continues to be excellent.

THE TURKISH MARKET FOR MACHINERY BELTINGS.

Generally speaking, industrial activity in Turkey is as yet of small importance, and domestic handicraft continues to constitute the larger part of the country's manufacturing (says the United States Assistant Trade Commissioner at Istanbul, Mr. J. T. Harding, in a recent report). Nevertheless, a certain amount of progress has been realised in the course of the past five or six years in the establishment of a number of small plants which are producing a wide range of articles on a small scale. The most important of the industries are the flour mills, tanneries, mechanical and metal workshops, a few cotton and woollen textile mills, knitting mills, etc. The Government naval repair yards and various military factories and workshops, and a few coal and chrome mines, several cement factories, and a few lumber and woodworking plants are also of importance.

Coincident with an increase in industrial activity during the past few years, the imports of foreign leather belting have shown a steady increase. Leather beltings are not manufactured in this country, and are imported from various Continental countries, chiefly Germany and Belgium, which in 1928 supplied 29,911 kilos (48.8 per cent. of the total import) and 20,828 kilos (34 per cent.), respectively. Single-ply leather beltings are imported in the following specifications: width in millimetres, 20 to 600; thickness in millimetres, 3 to 4, 4 to 5, 5 to 6. Double and triple beltings are required as follows: width in millimetres, 50 to 600; thickness in millimetres, 7 to 8, 8 to 10, 12 to 14, 14 to 16. The largest purchasers of the larger dimensions are the Government factories. The leather beltings imported must be of vegetable tannage, rather reddish in colour, and more or less stiff. The belting must be both glued and sewed with a thong. The flesh side must be well tanned and must be free from tannage. Double-ply beltings must be smoothly tanned and of equal appearance on both surfaces, glued and sewed.

A CORRECTION.

In the notes on "High-speed electric-driven planing machines" in "Engineering Topics" in our issue of May 8, referring to a new machine tool supplied to Fraser and Chalmers' Engineering Works, Erith, by Messrs. Craven Bros., Manchester, the former works should have been described as "Fraser and Chalmers' Engineering Works, Erith (Proprietors: The General Electric Company, Ltd.)."

The British Burmah Petroleum Company has declared an interim dividend at the rate of 1½d. per share (free of tax), payable June 30, to holders on the books on May 26.

A sum equivalent to £600 has been included in this year's Turkish Budget for defraying the cost of issuing a Turkish edition of the Quran printed in Latin characters.

Yugoslavia's imports in March last amounted to 99,133 tons, of the value of 658,472,961 dinars, as against 109,197 tons, of the value of 684,570,917 dinars in March, 1929.

The report of the Hyderabad (Deccan) Company for 1929 states that the dividends received from the Singareni Collieries Company amounted to 8 per cent. The net profit was £34,641, and after placing £2,000 to reserve and deducting the interim dividend, it is proposed to pay a final dividend of 2½ per cent.

A delegation representing the Roumanian Association of Petroleum Industrialists was recently received by the Roumanian Minister of Industry and Commerce, when a memoir was presented and discussed dealing with the present state of the country's petroleum industry, its difficulties, and the steps which should be taken to improve matters.

The profit of the Assam Oil Company for 1929, after charging all fields expenditure direct to revenue, income tax, directors' fees, interest on loans, and after writing off £60,000 for depreciation, was £7,033. This reduces the debit balance brought in to £304,760. During the year production from the Digboi field advanced further towards the volume required to meet the capacity of the extended refinery. That extension, now completed, provides, with the reconstruction of one of the main distillation benches, adequate and efficient plant to deal with the crude production aimed at.

SUDAN CHAMBER OF COMMERCE.

At the recent annual general meeting of the Sudan Chamber of Commerce at Khartoum, Mr. Aziz Kfouri, President of the Chamber, in the course of a comprehensive survey of the present position of the country, referred to the factors which in his opinion have contributed to the existing shortage of liquid capital, and pointed out that the reduced cotton yield in the Gezira has made the situation more difficult. He emphasised the point that abnormal progress is not to be anticipated, and that an advance in prosperity must be a gradual process. We give the following extracts from his speech:—

The total value of trade through all Customs stations for the year 1929 amounted to £E14,087,850 as compared with £E12,805,872 in 1928, an increase of £E1,281,978 or ten per cent. The total value of imports amounted to £E6,856,114 as compared with £E6,463,206 in 1928, an increase of £E392,908, or 6 per cent., whilst the exports and re-exports totalled £E6,809,122 as against £E5,947,026, an increase of £E862,096 or 14 per cent. In commercial circles it is generally felt that this increase in the total trade of the country is not sufficiently reflected in the markets, and that actually ready cash is becoming scarcer.

Last year it was thought that good rains, with better crops, would ease the situation, but, although as a consequence of good rains, we had excellent crops, no advantage has yet been derived from them. The export of dura was permitted from the end of last year, but owing to the low price offered from abroad it has not yet been found possible to export at a profit, and as a consequence large stocks are lying unsold. Egypt has taken her usual supply of sesame, and the balance remains without any possibility at present of being exported at a profit, and, unless prices abroad increase considerably, there does not appear any likelihood of being able to export dura, sesame and ground nuts to European ports. On the other hand, the heavy rains have been very detrimental to the Gezira cotton crop, and the loss through it will more than absorb any profit likely to accrue from the other crops.

With regard to the scarcity of liquid capital in the country, the following factors have, in my opinion, helped to bring this about: (a) The gradual restriction of credit by the banks. (b) The natives are using a good deal of their earnings in the purchase of sugar, which is a Government monopoly. (c) Although motor transport has greatly assisted the development of the country, the large sums spent in purchasing and running these vehicles all go out of the country with the exception of the agent's remuneration. (d) The hoarding of money by the fellata and others. And so, under existing circumstances, there is very little left to improve trading conditions.

The world-wide economic crisis which brought down the price of most commodities and has made it impossible for the present to export dura and sesame at a profit is not our fault, and the policy of the banks in restricting credit, although making things difficult for the moment, should prove a blessing for the future.

This statement of facts may appear gloomy and too critical, but I do not wish you to interpret it in that way, because all those of you who have spent many years in this country will, I think, agree with me that the Government since 1899 has done wonderfully well. Out of a disturbed, vast and desolate desert it has created in a comparatively short time a habitable country, good roads and communications, security, a fine port, schools for secular learning and medicine, and the Gezira irrigation scheme, besides cotton growing schemes in other parts of the country. The public health has improved to such an extent that the population is increasing rapidly, and I know of no country which, on the whole, has made such rapid progress. It is true that on the other hand trade has not progressed as rapidly as we expected, but we must not forget that owing to the country being purely an agricultural one trade can only develop by the development of agriculture and the increase in population. The warning I gave last year still stands good, and will, in my opinion, stand for some years to come, and that is, that we must renounce any illusion of abnormal progress and be content with a slow and gradual increase in trade prosperity.

As I have already said, the progress can come only through agriculture both by Government schemes and private enterprise. To illustrate what I mean, I give you the following example: Assuming that the natives in Khartoum Province receive enough inducement and interest to work, that the existing private agricultural schemes have facilities to extend and that the necessary water is obtainable, 10 private farms planting 1,500 feddans each yearly would each employ 150 native tenants cultivating 10 feddans. With the yield of 2 kantars, of which one would go to the native, and one kantar being sold at say £E7, this would mean 1,500; multiply by 7, equals £E10,500 per estate and for 10 estates £E105,000. Similar development in the other provinces and in the Gezira would mean some £E500,000 to £E750,000 increase in the purchasing power of the native and a relative corresponding increase in trade prosperity. From various interviews with the authorities I gather, although not officially informed, that the Government is prepared to help in this direction as far as the situation permits. Extension to existing schemes will be granted to the limit of labour and water available, and flood pumps will be granted from July 15 to the end of February, with possible extensions to the end of March when circumstances permit.

Let us hope that the proposed treaty between Great Britain and Egypt will soon be signed, and that following its conclusion more dams will be built to supply not only Egypt's needs, but the Sudan's as well. With more water, increase in population and new capital the progress should be more rapid than at present, and by increasing the country's resources trade should benefit considerably.

At present private owners of buildings and agricultural lands are severely handicapped by the absence of either an agricultural or mortgage bank, and I hope that the time will soon come when the Government, either in conjunction with the existing banking institutions or separately, will arrange for some assistance in this direction. During the past year the Gedaref Line was completed, but unfortunately was put out of action owing to the heavy rains. After the rains it was again put in working order and is now affording great relief to the Medani line. The trunk telephone line from Khartoum to Wad Medani district is now working very satisfactorily, and it is hoped that in the near future a telephone line to Port Sudan will be erected.

The report of the Aboukir Company for the year ended March 31 states that the net profits amounted to £15,641. Shareholders are again to receive a dividend of 5 per cent., free of tax, absorbing £15,000, and the carry-forward is £11,541, as against £10,000. Sales of land amounted to 122 feddans, 18 kirats, 15 sahms, and the profit on land sales amounted to £9,246. An area of 1,856 feddans, 12 kirats, 18 sahms has reverted to the company from the purchasers at a cost of £46,613. There was a further improvement in the yield of cotton, which partially compensated for the lower price at which the crop was sold. Owing to the low price of cotton the tenants were unable to pay their rents in full. The amount passed to the credit of profit and loss account was £28,585.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 14:—

Egyptian Futures.

Sakel Contract.—We have experienced a somewhat quiet and uneventful week in this market, and, whilst at time a fair amount of trading has been effected in new crop options, no factors have developed to influence any material change in the level of these since we last wrote. Trade reports continue to be very disappointing, and the restricted character of the yarn offtake is reflected in the retail demand latterly experienced for actual. The percentage of machinery stopped tends to increase, and in some districts closing down until the outlook improves is contemplated. As anticipated in our last report, the Government have declared their intention of taking Julys at 28 dollars; apart from the position in question appreciating to a few points over the above figure, the announcement has had little effect on the market. In any case, it appears probable that most of the tenderable cotton in Egypt will pass into official hands during the present month. The existing situation is too involved to permit of anything except pure guesswork in regard to the future course of values; new crop prospects and the trade outlook are at the moment "bearish" factors and have encouraged a certain amount of selling. However, with markets denuded of contracts owing to the amount of cotton held up by the Government, and the overhanging possibility of intervention at a later date in new crops, we certainly advise caution on the "short" side with values in the neighbourhood of 12.50d. for November.

Upper Contract.—Business in this contract has been relatively light during the past week, and apart from periodical transactions in new crops very little business has been put through. Trade support has been practically nil and spinners' purchases have been cut down to a minimum owing to the lack of yarn business.

Egyptian Spot.

We regret to state that the demand has shown no improvement, but on the contrary has actually declined during the past week. There are so many adverse influences working against the trade at the moment that it is extremely difficult to forecast when a revival will take place. The recent inquiry from America has practically disappeared and it looks as if there was nothing to hope from the home trade for some time to come.

Sakels.—Only a moderate inquiry has been witnessed, but, while the quotations for the medium and lower grades have hardened slightly, the finer qualities have eased.

Uppers.—A fairly good inquiry has been seen for cotton at from 30 to 50 on. There has been less interest shown in the lower qualities and only an occasional request for the top qualities has been met with. The selection all round has been drastically thinned out.

Pilion.—A moderate inquiry for cotton at round about 11d. has been seen, and on one occasion the best quality came in for request and a couple of hundred bales changed hands.

Nahda.—The general apathy has spread to the demand for this cotton, which last week showed some signs of revival. Egypt continues to make what appears to be very cheap offers, but buyers have been completely absent.

Maarad and White Cotton have suffered from neglect this week.

Fouadi and Farouki.—These growths have failed to attract any attention whatever.

Sudan Sakel.—A very moderate business has taken place.

C.i.f. business stagnant. Forwardings were returned as 5,086 bales Egyptian and 1,000 bales Sudan. Spot sales have been estimated at 900 bales Egyptian and 60 bales Sudan Sakel. Quotations of Sakel show a decline of 10 to 25 points for the better qualities, but quotations of Good, and below, have hardened 5 points on the week. Uppers are 6 points dearer and Pilion 15 points dearer on the week. F.G.F. Sakel to-day, 14.05d. F.G.F. Upper to-day, 10.32d. F.G.F. Pilion to-day, 10.95d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended May 8:—

Since our last report the futures market has been fairly active, but the tone, on the whole, has again been weak. The week's summary of price movements is as follows:—Sakellaridis: May, 28.00 dollars, unchanged; July, 27.72 dollars, 0.60 dollars up; November N.C., 25.35 dollars, 0.33 dollars down; January N.C., 25.90 dollars, 0.30 dollars down. Ashmouni: June, 19.81 dollars, 0.01 dollars down; August, 18.38 dollars, 0.27 dollars down; October N.C., 17.44 dollars, 0.30 dollars down; December N.C., 17.78 dollars, 0.25 dollars down; February N.C., 18.15 dollars, 0.26 dollars down.

Sakel.—At the beginning of the week, November was fairly firm, but, as a result of the weakness in New York and reports that the projected tax on long staple cotton imported into America was on the point of definitely becoming law, the market declined sharply and once more the level of 25 dollars was broken. Towards the close of the week, the better tone of New York induced some purchases for profit-taking, and a large part of the lost ground was recovered. Against the first May tender, dockets for 288,500 kantars were issued and it is expected that further heavy quantities will be issued against the second and third tenders of the month. The demand from the trade has been very poor, both for old and new crops, and there is nothing in the situation which gives ground for expectation of any change, at least in the near future, in the present depressing state of affairs. We look for a continuation of rather bearish markets. We give below the statistical position of Sakel in Egypt, as at the end of April:—Stock, Alexandria, 1,554,000 kantars; stock, up-country, about 75,000 kantars; total, 1,629,000 kantars. At the same date last year, the stock of Sakel in Egypt was about 1,331,000 kantars. We would add, for purposes of comparison, that exports of Sakel for the period May/August last season amounted to about 583,000 kantars. The Sakel/Uppers new crop straddle (November/October) this week stands at 791 points, against 794 points last week and 1,272 points at this time last year.

Uppers.—The market for this variety has been rather heavy and prices have declined in sympathy with American. The trade demand has been very limited. We give below the statistical position of Ashmouni and Zagora in Egypt as at the end of April:—Stock, Alexandria, 1,765,000 kantars; stock, up-country, about 65,000 kantars; total, 1,830,000 kantars. At the same date last year the stock of Ashmouni and Zagora in Egypt was about 1,347,000 kantars. We would add, for purposes of comparison, that exports of Ashmouni and Zagora for the period May/August last season amounted to about 1,043,000 kantars. The Ashmouni/American new crop straddle (October/October) this week stands at 292 points, against 264 points last week and 358 points at this time last year.

The week's receipts amount to 179,357 kantars, against exports 103,433 kantars; the stock in Alexandria stands at 3,959,823 kantars.

Spot.—The total turnover amounts to about 4,700 bales, of which

we estimate 1,500 bales Sakellaridis, 2,800 bales Ashmouni and Zagora, 200 bales Pilion, and 200 bales other varieties.

Sakellaridis.—The demand has been very poor indeed and has been mainly concentrated on Good Fair and below. Spot differences are, if anything, rather easier, and desirable cotton is getting daily more difficult to find.

Ashmouni and Zagora.—The low cotton, in these varieties also, makes up the bulk of the turnover. Some business was done in the Fully Good Fair range, but for cotton above this grade there was no demand at all. Spot differences do not show much change.

Pilion.—A very small business was done in the top grades at about last week's premiums.

Other Varieties.—There was a small turnover in the top grades of Maarad.

Crop, 1930.—The progress of the crop is satisfactory, and a large part of the initial delay has been recovered. The fight against locusts continues, but up to now there has been no serious damage.

The numbers are announced of 57 bonds of £100 each, of the Bengal Telephone Corporation, which have been drawn for redemption at par on June 30, 1930.

Messrs. J. Samuel White and Co., of East Cowes, I.W., have received a contract from the Jadranska Plovidba D.D., of Shushak, for two steamers, each 144 ft. long, for the company's passenger service to islands on the Dalmatian coast. They will be fitted with triple-expansion engines and return-tube boilers, burning coal, and developing a speed of 12¾ knots.

ENQUIRIES INVITED.

Why not visit
The SUDAN?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

The Anglo-Egyptian Negotiations.

The wider aspects of the negotiations between the Egyptian and British Governments as disclosed by the White Paper on the subject are dealt with elsewhere in this issue. Here it may be of interest to record the main variations in the Draft Proposals of August 1929 to which the British Government had expressed its willingness to agree before the negotiations were terminated. In Article 2 of the Draft Treaty, as agreed to during the night of May 7 and 8, which deals with Egypt's application for membership of the League of Nations are inserted the words: "His Britannic Majesty recognises her (Egypt's) right as a sovereign independent State to become a member of the League." In Articles 3 and 4, which correspond to Articles 6 and 7 of the Draft Proposals, there are certain verbal alterations; instead of the Parties undertaking, in the face of a dispute with a third State involving a risk of rupture, to "concert together" with a view to the settlement of the dispute, they agreed to "consult each other," and the clause "Each of the High Contracting Parties undertakes not to adopt in foreign countries an attitude which is inconsistent with the alliance *or will create difficulties for the other Party thereto*" sheds the words italicised in the new version. In Article 8 of the Draft Treaty the King of Egypt in the event of either of the Parties' becoming engaged in war will furnish all the facilities and assistance in his power "in accordance with the Egyptian system of administration and legislation" (words omitted in the 1929 Proposals) and the clause continues: "It will accordingly be for the Egyptian Government to take all the administrative and legislative measures necessary to render these facilities and assistance effective." Article 9 of the Proposals described the Suez Canal as "an essential means of communication between the different parts of the British Empire"; in the new version the description runs: "In view of the fact that the Suez Canal, while being an integral part of Egypt, is a universal means of communication as also an essential means of communication between the different parts of the British Empire. . . ." The stationing of British forces "near Ismailia, in the zone specified in the annexed note" (instead of, as in the Proposals, "upon Egyptian territory in localities to be agreed upon, to the east of Longitude 32 deg. E") is limited "until such time as the High Contracting Parties agree that the Egyptian army is in a position to ensure by its own resources the liberty and entire security of navigation of the Canal." More significant still is the substitution in the Draft Treaty, in the place of "such forces as His Britannic Majesty considers necessary for the purpose," of the words "such forces as do not exceed the number therein (in the annexed note) agreed upon." The contemplated Note was not completed, but from the Draft Note previously submitted by the British Government it would appear that the latter had accepted a limitation of the numbers of the British troops to 8,000 of the land forces and 3,000 of the Air Force, without making any provision for their reinforcement in the face of potential trouble, before an actual declaration of war.

The Question of the Sudan.

The Article regulating the future of the Sudan is left blank in the Draft Treaty of May 7 and 8. On May 5 the Egyptian Delegation presented alternative drafts for this Article:—

> Without prejudice to Egypt's right and interests in the Sudan, the High Contracting Parties agree that the question of the Sudan shall be reserved for future negotiations to be conducted between them in the course of a period of one year from the ratification of the present treaty

or

> Without prejudice to Egypt's rights and interests in the Sudan, the High Contracting Parties agree that the question of the Sudan shall be reserved for future negotiations. Meanwhile, the *de facto* position obtaining in the Sudan before 1924 shall be restored.

Nahas Pasha was informed that, unless he agreed to the restoration of the British wording of the Sudan article, no treaty was possible. On the following day he expressed willingness to accept the British draft with two minor amendments, provided that the Delegation could put in a statement of their position in the form of a note to the effect that the Sudan article did not in any way affect Egypt's right of sovereignty over the Sudan and the joint administration thereof by the two High Contracting Parties. The Egyptian Delegation was informed that the counter-draft and note combined were unacceptable.

Digitized by Google

In the afternoon of the same day, May 6, the Delegation said that it was prepared to accept the original wording of the British draft article with the addition of a sentence to the effect that the High Contracting Parties agreed, if either of them should so request, to enter into friendly discussions within twelve months of the coming into force of the treaty with regard to the application of the 1899 Conventions. It objected, however, to the wording of the passage in the note providing for no discrimination in the Sudan between British subjects and Egyptian nationals; it wished it to be made clear that the immigration of Egyptians into the Sudan would be subject to no restriction. The British Government was prepared to meet the Egyptians to the extent of allowing that the Governor-General of the Sudan should not exercise "unreasonably" the right "which any Government must possess to control immigration of the interests of its own nationals," but the Egyptian Delegation would not accept the word "unreasonably." Finally the British negotiators agreed to accept the two minor amendments to the Sudan article proposed by the Egyptians on the previous day; but, having considered the matter after the adjournment in the early hours of the morning of May 8, the Delegation returned to say that it could not continue the negotiations unless the British Government modified its position. This the Government refused to do, and the negotiations were terminated. Before it left London the Delegation complained that a wording of the Sudan article which had been accepted by the British negotiators was subsequently rejected by the British Government; but there is no reference in the White Paper to this incident.

Yugoslav Ministerial Changes.

During the past week changes were made in the Yugoslav Cabinet. The Minister for Agriculture and Social Welfare handed over their posts to two new Croat Ministers, while remaining in the Cabinet as Ministers without portofolio, and two other Croats were appointed as Ministers without portfolio. All the four Croats were formerly members of the Croat Peasant Party, and among the two new Ministers without portfolio is Dr. Ivan Shvegel, of Bled, who has represented Yugoslavia abroad in consular and diplomatic capacities and who has many friends in England. There are thus no less than eight Croats in the Yugoslav Government. That they have accepted the present régime goes without saying, and for this reason, no doubt, they may be denounced by the irreconcilables among their fellow-Croats. At the same time the Dictatorship can urge with some justice that the Government is not unrepresentative of Croatia. The Yugoslav problem is admittedly a difficult one. On one point alone is there universal agreement, and that is that the state of affairs which the Dictatorship intervened to abolish was a disgrace to Yugoslavia and a menace to the unity of the Kingdom. King Alexander resolved that only by means of a Dictatorship could it be ended. He may have anticipated—as so many of Yugoslavia's foreign friends hoped at the time—that a year or so would suffice to allow for the restoration of constitutional government without danger to the internal harmony of the country. The event has proved that this goal cannot be so easily reached. There are indications that an increasing number of Croats are prepared to give the Dictatorship credit for good intentions, and there can be little doubt that the end which all true Yugoslavs desire to reach is more likely to be attained by co-operation than by non-co-operation. It is not without significance that the new Croat appointments have been made during the trial of Dr. Matchek and a number of young Croats accused of conspiring against the existing régime. It is difficult to believe that the new Ministers would have taken office at this particular moment, if they thought that any drastic punishment was to be meted out to Dr. Matchek, whatever course the law may have to take in the case of those who may have endangered the lives of others. The outside world will certainly watch with interest the effect of a substantial Croat leaven in the Yugoslav Government.

A Constitution for Syria.

The promulgation on May 22 of a new Constitution for Syria settles at least one question: that Syria is not to have a King, but, like her Mandatary, is to be a Republic. It will be remembered that the Constitution which the Damascus Assembly drew up so impinged upon the Mandate that M. Henri Ponsot, High Commissioner, was forced to adjourn it *sine die*. After a year's interregnum, during which, it must be assumed, the French authorities have paid such attention to economic improvements as to secure political quiet, there comes another Constitution, which includes an Article giving to the Mandatary all those powers—maintenance of order, defence, foreign relations, and so on—which are essential if the Mandate is to be fulfilled, but which the previous Constitution attempted to deny to France. Under this new Constitution, which will come into force after a General Election has been held, a single Chamber will be elected for four years. The President of the Republic, who, naturally, must be a Muslim, will be elected by the Chamber for a period of three years, and he will have, on certain conditions, the right to adjourn or to dissolve the Chamber. This political condition is to continue until such time as Syria is ready and fit for the conclusion of a treaty between herself and France on the basis of independence: a remark that applies also, presumably, to the Constitutions of the Lebanese Republic, of the Autonomous Sanjak of Alexandretta, of the Alawiya, and of the Jabal Druse. Whether these various States in Syria will progress tranquilly towards the desired goal, or whether there may be fresh disturbances owing to the susceptibilities of the Nationalists, cannot be said; but at the moment it certainly looks as if France had played her cards very cleverly, patiently, and successfully.

The Trans-Persian Railway.

First reports reaching this country concerning the cancellation of the contract between the Persian Government and the Ulen Company for the construction of the Trans-Persian Railway suggested that the Company had badly failed to carry out its obligations, and colour was lent to this impression by certain accounts of the Shah's recent visit to Khuzistan, during which, it was said, Riza Pahlavi expressed serious dissatisfaction with the progress made with the line northwards from Khor Musa. So far as is known, the northern section of the line, from Bandar-i-Gez on the Caspian, has progressed satisfactorily; it was about the southern section, for which British and French firms were, with the Americans, responsible, that rumours had been spreading that all was not well. Later reports, however, shed a different light on the suggestion, emanating from Persia, that the Company had failed to act in accordance with its contract; for it is stated from New York that construction work was stopped on May 1 because the Persian Government was £600,000 in arrears of payment to the syndicate. If this is really so, one wonders what has happened to the proceeds of the tea and sugar monopoly. It would appear that they are being withheld in order to impose on the Company a certain point of view. Without full possession of the facts it is impossible to indicate how long it will be before work on the southern section of the line is resumed. It is certain, however, that a serious delay would do little good to Persia's international credit, and it is to be hoped that the dispute will speedily be settled by amicable negotiation.

The Palestine Problem.

If the outside observer were to take at their face value the facts that on May 16 there was not only an Arab strike in Palestine, but also a protest in many centres in Islam against the "Zionist policy" of the British Government, and that on May 22 there was a full strike by Jews in Palestine in protest against the British Government, he might well imagine that grave injustices were being perpetrated. If he looked a little deeper, however, he would find that things were not nearly so tragic as they were represented by Muslim and Jewish officials. That the

Digitized by Google

"demands" of the Palestine Arab Delegation to London were refused, on the obvious ground that they ran counter to the Mandate, is by no means the same thing as saying that serious injustice will be done to the Arabs of Palestine; and that the certificates for 2,300 Jewish immigrants previously authorised to enter Palestine were cancelled, particularly in view of the investigations of Sir John Hope Simpson, can by no means be said to strike "at the foundations and objects of the Mandate." Quite obviously, as the Under-Secretary for the Colonies said last week in the House of Commons, it is desirable that further arrivals of Jewish immigrants should be restricted pending receipt of Sir John Hope Simpson's report. The point is so clear that one would have thought that those who have to work in close touch with the British Government, as does the Jewish Agency, would have immediately appreciated the necessity of the step. To bandy about remarks such as the "disloyalty of the British Government" or "betrayal by the Government" is no more helpful than the Arab Delegation's remarks upon the Zionists' influence on the Government. But it is so very difficult, apparently, to realise that Great Britain is in Palestine in the true interests of both Arab and Jew.

INDIAN NOTES

An Economic Boycott.

The news from India suggests that during the past week there has been little, if any, change in the general situation, which would seem to be well in hand. The impression was confirmed by the Secretary of State in the House of Commons on Monday in the course of a debate which was notable for the admirable restraint and sense of responsibility displayed by the principal speakers of all parties. On the frontiers a vigilant watch is being maintained, and there has been no further trouble at Peshawar. Elsewhere in India rioting, more or less serious in character, has occurred at a few places, and bombs have been found at Howrah and Madras. Conditions at Sholapur are tending to become normal, although the Bombay Presidency is still the most disturbed of the provinces. Breaches of the Salt Law continue, but they are becoming less frequent. The long threatened mass attack on the Wadala Salt Works has been made, and ended in the arrest of Mrs. Sarojini Naidu, who had succeeded Mr. Abhas Tyabjee as leader of the movement. The raid was resumed four days later, but the raiders were again driven off, and many arrests were made. There are not wanting indications that the Congress is dissatisfied with the progress of the Salt campaign, which has been only a partial success. A great effort is now to be made on other forms of rebellious activity; and these were defined in the resolutions adopted at the recent Allahabad meeting of the Congress Working Committee. Prominent among them is the boycott of British goods, which was started a few weeks ago. This is to be a specially intensive campaign, and it is designed to cover not only goods, but the operations of British banks, insurance companies, shipping, etc. The idea is that it will be possible in this way to exert pressure as will induce British merchants, bankers and shipowners to urge the Government to make political concessions. It is satisfactory to see that the Manchester Chamber of Commerce has lost no time in stating very definitely that the boycott will have no such result. Other illegalities which the Congress Party contemplate are a campaign against the payment of land revenue, a boycott of liquor shops, and breaches of the Forest Laws. In short, the party is now an avowedly revolutionary body. "Non-violent non-co-operation" has become open rebellion. The Allahabad resolutions put this beyond doubt; and it is not, therefore, surprising to see that the question of declaring the Congress to be an unlawful organisation is being seriously discussed in India. Large sections of the population would almost certainly welcome this step, as the tyranny of the extremists is said to be creating a strong feeling of resentment on the part of merchants and shopkeepers who suffer from the picketing and boycotting which are now being extensively practised in the bazaars.

An Interesting Jubilee.

The celebration by the English-owned and edited daily paper of Karachi of its jubilee has an interest outside the Province of Sind. Old inhabitants of Karachi will well remember the first Editor of the paper, then called the *Sind Gazette*, Colonel Cory, a fine old soldier and a vigorous writer. He was succeeded by his daughter, Mrs. Tate, the first, and, so far as we are aware, still the only lady Editor of any English newspaper of any prominence in India. She was an excellent Editor, too, though her fame in the literary world did not equal that of her sisters, Laurence Hope and Victoria Cross. It was, however, the energy of the local Mussolini, Mr., now Sir Montagu Webb, which converted the paper into a daily, and changed its name to its present designation. The paper has been of the greatest assistance to the progress of Sind, and of Karachi as its capital and the port of the Punjab. Considerable boosting there was, but such boosting was extremely necessary in the face of the somewhat contemptuous indifference of Bombay, and particularly of the Bombay newspapers. The insistance of the *Daily Gazette* on the project had no little share in the belated decision to undertake the great Sukkur Barrage scheme, and the paper has never failed to emphasise the importance of Karachi as the Air Port of India. Apart from the sweet uses of advertisement, the *Daily Gazette* has had a very considerable educative influence in Sind, and has had a great part in the awakening of this ancient province from its former apathy. The jubilee issue of the paper contains articles of great interest on the administration of the Province, and on the development of its irrigation system, and of the port and City of Karachi, which indicate the great advance that has been made in the last fifty years. Incidentally, it may be observed, the leading position which the *Daily Gazette* has attained is the more remarkable and creditable, in that it is distinctly contrary to the progress of Anglo-Indian journalism in other parts of India. Most of those who have lived in India can remember when there were three flourishing English dailies in Calcutta, the same number in Bombay, and two in Madras. Now there is but one in each place. The English daily in India still, however, holds its honourable position as an example to more local journals, and as the educator of European and Indian opinion. In these respects the *Daily Gazette* of Karachi yields to none of its contemporaries elsewhere.

THE ANGLO-EGYPTIAN NEGOTIATIONS.

The publication of the White Paper dealing with the recent Negotiations for an Anglo-Egyptian Settlement enables, as might have been expected, a much clearer view to be obtained of the course of the discussions than was possible from any information that was available at the time. There is, fortunately, nothing in the Paper to disturb the impression, conveyed by both parties, of the complete harmony in which the negotiations were conducted, and the emphasis so generously laid on this point by the members of the Egyptian Delegation is the better appreciated in the light of the fact that the British Delegates might well have registered their disappointment at the frequent attempts made to abandon the 1929 Proposals as the agreed basis of discussion. Whether the two parties were at any time as near to agreement as was represented will appear doubtful to those who examine the published documents carefully. The test is to be sought in the wide divergencies between the Draft of the proposed treaty handed to the Egyptian Delegation on April 17, before the adjournment over Easter, and the Egyptian Counter-Draft communicated on the resumption of negotiations on May 5. It is true that, as a result of the all-day sitting on May 7, which lasted until the early hours of the following morning, the wording of a draft treaty eliminating most of the modifications that the Counter-Draft had sought to introduce was agreed upon; but this document meant nothing with the text of the Article on the Sudan undrafted, and, no less important, many paragraphs of the Note to accompany the Treaty still under discussion. The time had merely come beyond which the negotiations could not be prolonged, and it became necessary for the Egyptians to make their position as clear as the British Government had made its own last August, when it declared in effect that it would admit no radical modification of its attitude on the Sudan. Nahas Pasha and his colleagues revealed then for the first time the fact that they had no intention of accepting what had been definitely and emphatically stated to be the British standpoint in regard to the Sudan. Among their own followers in Egypt they may be liable to be taken to task for having in such circumstances spent time and money in attempting to achieve the impossible; but a more long-sighted view will hold that the negotiations were worth the trouble for the widening of the Wafdist outlook that they will inevitably have involved.

Much as a treaty between Egypt and Great Britain was to be desired in the interests primarily of Egypt, but also of both countries, it is almost impossible to avoid the conclusion, after a close examination of the White Paper, that no agreement reached on May 8 could have proved a success in practice. The Egyptian Delegation and the British Government not only cherish irreconcilable views regarding the Sudan, but they also approached the subject of an Anglo-Egyptian treaty from totally different angles. In August, 1929, the British Government offered, and Mahmoud Pasha accepted for submission to the Egyptian people, a "Gentlemen's Agreement." Each party to that Draft credited the other with honourable intentions, and was content to trust to the new atmosphere created by the alliance to enable finality to be reached in regard to problems that could not be wholly solved at the time. This year's Egyptian Delegation introduced other views into the negotiations. There was to be no need for trust on either side; the narrow limits of British opportunity and responsibility were to be clearly defined, and the wide latitude left to Egyptian discretion equally so. With a happy sense of the fitness of things the 1929 Proposals had declared in the first clause that "the military occupation of Egypt by British forces is terminated," and in the second clause, as embodying the other main purpose of a treaty, that "an alliance is established between the High Contracting Parties in consecration of their friendship, their cordial understanding and their good relations." In the Egyptian draft this year the first clause maintained its position, but the second was relegated to fifth place, as being subordinate in purpose to Egypt's admission to the League of Nations and the ending of the capitulatory régime—a small point, perhaps, but significant. The Proposals had left the number of British troops to be retained provisionally in Egypt to the British Government's discretion; the Counter-Draft would restrict them within a fixed maximum. Common sense and military efficiency, speaking in the Proposals, provided that the armament and equipment of the Egyptian forces "shall not differ in type from those of the British forces"; not so the Counter-Draft, which would have it that "the armament of the Egyptian forces shall in general be similar to the type of armament used by British forces." When it was proposed, in order to meet the Egyptian demand for unrestricted immigration into the Sudan, that the treaty should stipulate that the Governor-General would not exercise "unreasonably" the right which every Government must possess to control immigration, the Egyptian Delegation insisted on the omission of the word "unreasonably." It was, perhaps, as much in matters of secondary importance that the different atmosphere introduced this year by the Delegation was shown as in the major questions affecting the Sudan and the capitulatory régime. The value of the tactics employed in bringing captious modifications forward at the eleventh hour may be gauged by the fact that many of them were dropped when challenged. British imperturbability remained unruffled to the end, and when the negotiations were formally terminated "speeches were made by the heads of the two delegations expressing regret that the efforts which had been made by both sides to reach agreement had failed."

There can be little doubt that the firm stand taken by the Egyptian Delegation will win it the approval of the Government's followers in Parliament and the perfervid acclamations of the crowd. The British Government, on the other hand, will be challenged for many of the concessions that it has made in its painstaking effort to achieve agreement, and the failure of the Egyptian Delegation to accept the terms offered will be cited as proof of the danger to which Great Britain will be exposed if a "Gentlemen's Agreement" should not regulate her relations with Egypt. It may be doubted, however, whether in the peculiar circumstances in which the two countries are placed there can ever be any treaty between them which is not frankly based on mutual trust and confidence. So long as Egypt is not prepared to trust Great Britain's undertaking not to exercise a right "unreasonably," so long as she insists on leaving herself a loophole for introducing into the Egyptian army armament that must hamper military co-operation, it is better, perhaps, that the present indeterminate relationship should continue. The course of the negotiations fortunately enables the British Government to hope that this indeterminate relationship, based, as it has to be, on the Declaration of 1922 and the events of 1924—a relationship which has been deliberately preferred by the Wafd Government to a "Gentlemen's Agreement"—will be loyally accepted in the future by Egypt, and will not be subjected to the pinpricks and more overt attacks that occurred before the friendly negotiations between, and mutual protestations of friendship by, the Government of Nahas Pasha and the British Government.

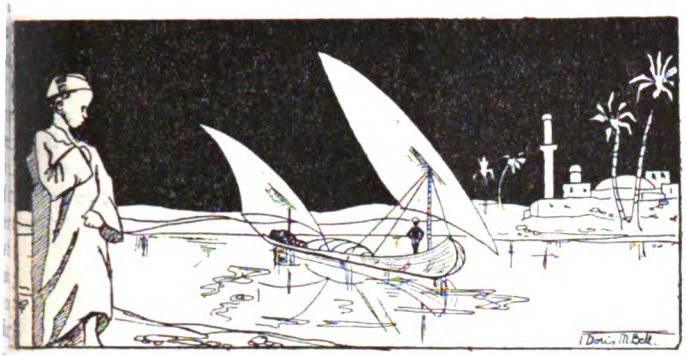
From Our Own Correspondents.



EGYPT.

Cairo, May 17.

Egypt's Plagues.

The plague of locusts under which Egypt has been suffering lately has not yet by any means abated. Latest reports from Sinai state that the situation there is still sufficiently serious to raise grave apprehensions. A short time ago it was thought that with the coming of the hot dry weather, the possibility that fresh swarms might hatch out had been avoided, but last week rain fell again and enormous numbers of young hoppers are now hatching out. The desert round about Al Arish literally stinks from the millions of dead bodies, and is completely devastated. The young hoppers are ravenous, and thousands of tons of poison bran has been used with good results, but the numbers are so overwhelming that fears have been expressed that this time it will not be possible to prevent swarms of young hoppers from coming to maturity and flying into the interior of the country. In the earlier part of the campaign the greater part of the work was carried out to the north of Sinai, but now Southern Sinai is the chief battle ground, and the work of fighting the locusts is much more difficult there owing to the hilly nature of the desert. Over £E100,000 has already been spent, of which £E30,000 was on cars, and it is stated than another £E200,000 will be needed. The Sudan Government is preparing for an invasion of their territory. This usually takes place about June or July and is extremely difficult to combat owing to the huge areas over which it is possible that the invaders may enter the country.

As if a plague of locusts was not enough for the country to cope with, an outbreak of bubonic plague is reported from Giza, a suburb of Cairo. An official *communiqué* was issued on Thursday stating that in view of the fact that the number of deaths in a village in the Giza Markaz was alarmingly high, steps had been taken to discover the reason, and after a number of houses had been carefully inspected a number of persons were found to be suffering from bubonic plague. Up to the present about 46 cases have been reported. The outbreak is considered to be very serious, for there have also been cases in Lower Egypt. Extra doctors have been appointed to assist the Public Health Department and serum sufficient for 3,000 persons and a large number of disinfectors have been called for by that Department. *Al Siyasa*, the Opposition paper, which does not hesitate to attack the Government, has published a leading article regarding this outbreak which certainly appears to contain a larger element of truth than such leaders do usually. *Al Siyasa* accuses the Government of omitting to take proper precautions in the matter of the outbreak. It said that the Government was too busy making elaborate preparations for the reception of the official Delegation to have any time for such things as controlling the locust menace or the plague outbreak. It further alleges that the Central Government in Cairo is mobilising masses of people from all over the country and bringing them to Cairo to receive the Delegation, and that this will be one of the best means of spreading the epidemic.

Fire at Gezira Sporting Club.

Early this week a fire broke out at Gezira Sporting Club and destroyed the polo stands and a large shed nearby in which mowing machines were kept. There is nothing left of the stand, and it is estimated that about £E500 worth of machinery was destroyed. It is believed that the cause of the fire must have been a cigarette end dropped into the cushions covering the seats during a cricket match. There were six mowing machines in the shed and as they contained petrol and oil they very soon caught fire. Two large palm trees were also badly burned. It is understood that the stand was insured, but that the machinery will be a dead loss.

Awaiting the Delegation.

The Wafd are making vast preparations for the return of the official Egyptian Delegation, who are expected to arrive at Alexandria on May 19. Deputations are expected from all the provinces and all the schools will be on holiday. The special train which has been chartered to take the Delegation from Alexandria to Cairo will teem with enthusiastic Wafdists. Stops will be made en route at the three principal stations, where more supporters will clamber on to the overloaded train. An appeal has been issued by the Wafd Committee that order should be maintained in the streets, but if the Wafd are determined to hold a huge demonstration no appeal can possibly keep order. Nahas Pasha is expected to make a statement in the Chamber of Deputies soon after his

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are INVITED for ASSISTANT MASTERSHIPS for teaching Commercial Subjects in the Intermediate Schools of Commerce.

Applicants must possess a Commercial University Degree (preferably with honours) and some experience of teaching.

The salary offered is £E450 a year for applicants with at least two years' experience, and £E415 for applicants with less than two years' previous experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, S.W.1.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are INVITED for ASSISTANT MASTERSHIPS for teaching English in Egyptian Government Secondary Schools and Intermediate Schools of Commerce.

Applicants must either possess a Degree (preferably with Honours) from a University, and (preferably) have had some teaching experience in Secondary Schools, or possess a Teaching Certificate from the Board of Education and have had at least two years' experience as teachers.

The salary offered is £E405 a year for Assistant Masters with a University Degree, but no previous teaching experience, or less than two years' experience, or with a Board of Education Teaching Certificate and between two and five years' teaching experience; and £E450 a year for those with a University Degree who have at least two years' previous experience or the Board of Education Teaching Certificate and at least five years' teaching experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 30, Victoria Street, London, S.W.1

arrival. The local Press is at present setting forth at great length the history of Egypt's associations with the Sudan. There is a feeling that once the British people are put in possession of the "true facts" regarding the Sudan, they will be only too eager to see Egypt's claims satisfied. The idea that negotiations will shortly be resumed was, however, not held by a prominent Wafdist Minister in Cairo. This Minister stated that Great Britain was stupid not to agree to the Egyptian terms, as in his opinion Nahas Pasha had conceded much too much. This would not, he stated, happen again. Nahas Pasha's statement is eagerly awaited, although it does not seem possible that he can add much to those statements which he has already made to the Press, Arabic, English, and French.

CYPRUS.

Nicosia, May 5.

The Greek Centenary.

The Greek community, holding that it forms a not unimportant section of the Hellenic race, has made a praiseworthy and successful effort to take a worthy part in the celebration which has marked the commemoration of the centenary of independence. Much enthusiasm has prevailed throughout the island. Athletic sports have been held, and although bad weather necessitated postponements on two days, they were carried out with spirit. Greek visitor to Cyprus, and others returning from Jerusalem have been warmly welcomed. Numerous entertainments have been arranged. An interesting event has been the presentation, in the Greek theatre at Nicosia, of a play of Euripides ("Iphigenia in Aulis"), adapted, in modern Greek, by Professor Ch. Papachryostomou, of Nicosia; the musical composition for the chorus being by M. I. Michaïlides. It was very well rendered after but little preparation, and was enthusiastically received. It may lead to the presentation of other classical plays.

The Bishopric of Papho.

It is generally agreed that no better choice could have been made for the Bishopric of Papho than that of the distinguished member of the Greek Church now in America, Leontios Leontinou, D.D. He is a native of Limassol, and his education began in the island, where he soon showed such ability that he was sent to Athens to continue theological studies. Returning after a few years to Cyprus, he was appointed preacher to the Bishop of Papho. On the recommendation of the Senate of the University of Athens, he proceeded as an exhibitioner to America. There he soon made his mark, and in due course, having submitted a thesis on the Greek Church in Byzantine and other periods, received the degree of Doctor of Divinity in the University of Colombia. The announcement of his appointment, which gives great satisfaction throughout the island, was telegraphed to him by the Archbishop. He has received numerous congratulations. He is 34 years of age. His portrait has appeared in the *Phone tes Kyprou* ("Voice of Cyprus").

General News.

Among the draft laws awaiting consideration is a Bill of considerable length (37 clauses) which aims at consolidating the existing laws which relate to the publication of newspapers, the registration of books, and other matters. It is strongly opposed by the directors of ten Greek and two Turkish papers as infringing the liberty of the Press in a manner inconsistent with British policy, especially seeing that Cyprus is now a British Colony, and that the native Press has never encouraged or manifested and tendency to sedition. A strong protest has been submitted to the Governor, and is to be carefully considered.

A movement is on foot, to petition for the return of two Greeks who were required some years ago to leave the island and who have been living at Athens, *viz.*, M. N. Katalanos and Dr. Ph. Zannettos. It is argued that times and circumstances have greatly changed since their exile was pronounced.

Reconstruction of the Cabinet.

A long while ago the President of the Council declared that after the questions of Reparations and the Budget had been settled, he would proceed to the reconstruction of his Cabinet. The different factions in the Democratic Entente have been very discontented with the distribution of ministerial portfolios and have not concealed their discontent. The result was a very unstable situation which had to be remedied, if the Democratic Entente were not to lose its power. It was all the more necessary in view of the economic crisis which, hitting the whole country, obliges the leaders either to unite in their search of the most efficacious remedy or else to go out and yield place to others.

Eight days ago, after all this procrastination, the President of the Council went to the King and told him of the changes he proposed to make. The following day he asked his colleagues to aid him in the accomplishment of his task. He gained their consent. All the Ministers immediately placed their portfolios at his disposal. Fortified by this decision, M. Liaptcheff summoned on May 13 the President of the Sobranye, M. Tsankoff, who two months earlier, had not only refused his collaboration but had also pressed on the formation of a new Cabinet under a new Chief. An entente between M. Liaptcheff and M. Tsankoff was essential for the hoped-for reconstruction, all the divisions which were eating away the Party and Government being due to disagreements between the two heads of the Democratic Entente. M. Tsankoff asked to consult his friends and, the following day, in a fresh interview, he announced to M. Liaptcheff his consenting to participation in the Cabinet, and put forward his conditions: he demanded three portfolios, of which one was to be either that of the Interior, or that of Foreign Affairs, or that of Finance. These conditions were discussed. M. Liaptcheff refused to yield any of the three important posts, of which the holders (Liaptcheff, Bouroff, Moloff) owed it to their friends to keep their positions, but he promised a choice of three of the remaining portfolios.

This gave sufficient satisfaction to the friends of M. Tsankoff, and it was thought that the affair was finished. But the friends of M. Liaptcheff, unsettled by the large place given to the Tsankovist group which had fought so hard against the Government, showed opposition to this agreement and urged the President of the

Digitized by Google

Council not to accord in any case more than two portfolios to the President of the Sobranye. This counsel, supported by the Macedonian group, was put forward so strongly that M. Liaptcheff had to bow before it, and, going back on his offer, he proposed that M. Tsankoff should content himself with two portfolios, instead of the three promised. Naturally, M. Tsankoff refused. Then came a rupture. But a curious phenomenon ensued. While M. Liaptcheff, after meeting M. Bouroff, presented to the Palace on the night of May 14-15, a ministerial list in which he had only four new names (this list received royal approval), all the factions in the Governmental group protested. The Tsankovists detached themselves from the Governmental majority and prepared violently to oppose the new Cabinet. The old Progressives, partisans of M. Doneff, who had always until then appeared in the same list as the Populists, partisans of M. Bouroff, with whom they constituted one of the strongest groups in the Democratic Entente, at once joined the Tsankovists in declaring that they would only return to the ranks of the majority if M. Tsankoff were in the new Cabinet. One of the Government Ministers, M. Naïdenoff, head of the Department of Public Instruction, handed in to the President of the Council his resignation, in which he said plainly that the reconstruction had failed of its purpose—which was to attract M. Tsankoff to the Government—and that in these conditions, the new Cabinet, as it was constituted, did not command a majority in Parliament and had not the necessary power to govern.

And on the following day, May 15, at the moment when the old Council of Ministers was holding a second session, the ukases not yet being signed, two of the outgoing Ministers, M. Kouleff and M. Bobochevski (Justice and Commerce respectively) declared to the President of the Council that they had handed in their portfolios only to facilitate an agreement with M. Tsankoff, who, they thought, ought to be introduced into the Cabinet, but that, this agreement not having been realised, owing to the friends of M. Liaptcheff, they retracted their resignations and took back their portfolios—which put the President of the Council under the necessity of presenting to the King the resignation of the whole Cabinet and of thus provoking a ministerial crisis.

To avoid the danger of a final check, M. Liaptcheff was obliged to make a fresh appeal to M. Tsankoff and to give him three portfolios at the risk of creating differences with the group of his friends who were opposed to this concession because they heard that, the Bourovists always having had acknowledged sympathy with the Tsankovists with whom, politically, they had much in common, the Liaptchevists would be relegated to second place in the Government, the Cabinet having to be constituted on the basis of three representatives for each of the three principal groups—the tenth Minister, for War, being, as an officer, politically neutral. The Liaptchevists then tried to keep at least the Minister for Public Works, M. Slaveiko Vassileff, who represented in the Government the personal friends of General Volkoff, ex-Minister of War and determined opponent of M. Tsankoff, to whose fall in December, 1928, he contributed much. But again their requests were refused, the keeping in office of M. Vassileff being against the wishes of the Bourovists, who naturally did not wish to decrease the number of their representatives in the Government. In spite of this appreciable loss, which would soon be increased by that of the President of the Sobranye, promised to the old Radicals who were unrepresented in the Cabinet, the Liaptchevists had the great merit of resigning themselves to the inevitable and of withdrawing their threat to pass into the ranks of the Opposition.

M. Liaptcheff was thus able in a few hours to form a Cabinet comprising all the groups of the Democratic Entente. In this new Cabinet, only M. Liaptcheff, M. Bouroff, and M. Molloff remain from the former Cabinet, without counting the Minister for War, General Bararjieff, who is kept at his post. All the other Ministers are new men, active and energetic.

This Government has the urgent duty of remedying the

serious economic condition of the country, and it is stated that one of its principal tasks will be to conclude a new foreign loan.

The Cabinet, the Opposition, and the King.

Through a reading of the ukases relative to this Cabinet change, it has been learned that the constitution of the new Cabinet was effected, not, as had been thought, by the out-going of some Ministers and the incoming of others, but that it had been preceded, on May 15, by the collective resignation of the former Cabinet. This fact, unknown until now, has caused general surprise and has given rise to most lively criticism on the part of the Opposition. These criticisms, however, were directed much more against the King than against the President of the Council. Speakers of the Opposition thought that, in face of a collective Cabinet resignation, the King ought to have consulted the Sobranye, through the heads of the different groups, before arriving at any solution. In place of this, the King preferred to settle the crisis by a simple exchange of ukases with the President of the Council and to approve at once the list of members of the new Cabinet which was presented by M. Liaptcheff. The leaders of the Opposition feel much aggrieved, and have uttered some severe things on the King's Speech, which M. Liaptcheff has defended, declaring that he had acted reasonably, because, at bottom, there was no ministerial crisis.

Belgrade, May 22.

The New Croat Ministers.

Last week an interesting change in General Zhivkovitch's Cabinet was made by the nomination of four new Croat Ministers in addition to the four Croats already holding portfolios. The new Ministers are M. Stanko Shibenik, M. Nikola Preka, Mirko Neudorfer, and Dr. Ivan Shvegel—all of them having earlier been members of the Croat Peasant Party. MM. Preka and Shvegel were known to have entered into close relations with the Cabinet, while M. Shibenik was considered until now to have remained an orthodox Raditchist of the more moderate group within the Party. At the time when the Croat Peasant Party was in alliance with the Serb Radicals, he was President of the Parliamentary Club of that party, and certainly counts for much in its ranks.

It is, however, known that even M. Shibenik—not to speak of the other new Ministers—joined the Cabinet without the approval or even the knowledge of what remains of the Croat Peasants. In a statement published in the Press to explain his step, M. Shibenik emphasises that only good Serbs, Croats and Slovenes can be good Yugoslavs, and that in accepting Yugoslavdom one does not renounce Croatdom or Croat traditions. This Press statement certainly indicates that M. Shibenik must have received certain promises corresponding to his feelings before entering General Zhivkovitch's team. It remains to be seen how far general conditions will allow the early fulfilling of the ideas of M. Shibenik about Croatdom, and whether he will remain in the Cabinet in the event of the fulfilment's being delayed.

The Government's action is not difficult to understand. It is faced with many responsibilities. Not only is M. Matchek, President of the Croat Peasant Party, elected after Stephen Raditch's death, being tried, but also the Vice-President, M. Predavetz—the latter by the Zagreb Court. In many quarters it is held that the trials are not wholly of a political character, but involve charges calculated to discredit the Croat leaders. It is, therefore, not unnatural that the Dictatorship should wish Croats, especially members of the Croat Peasant Party, to belong to the Cabinet which will have to bear the responsibility of any convictions there may be. There are now eight Croats in the Cabinet and eight Serbs. Four Croats and two Serbs—one-third of the Cabinet—are Ministers without portfolios. This peculiar composition will certainly be changed.

The new appointments constitute a departure from the former practice of the Dictatorship. Hitherto Ministers have been appointed by the King on the strength of their individual qualifications; the present nominations show a distinct consideration for them as party men, representative of the Croat Peasants. This feature, together with certain conversations that have taken place between members of the Government and representatives of groups and sections of the former parties, suggests that the Dictatorship may not be averse from creating for its Cabinet Ministers a backing among the people. Such an attitude is in full conformity with the Government's principle, which it has repeatedly proclaimed, that all sound constructive forces will have an opportunity of working for the good of the State by co-operation with the Government. It will be only when such a concentration of sections or members of former political parties has taken place round the present Cabinet that there can be any question of the possibility of a return to parliamentary or semi-parliamentary government.

The Government by selecting the new Ministers not merely because they are Croats, but in their capacity of former, if dissident, members of the Croat Peasant Party have taken the first step in this direction. The work, however, will necessarily be slow and difficult. The breaking of the authority of old leaders over the masses is not an easy task, and the setting in their place of new leaders—especially if they are recruited among dissidents—is a still more delicate matter. The present Cabinet has already shown its resolve and steadfastness in many things, and it can be safety trusted to continue its efforts for the formation of a new party to champion its ideas for the organisation of a strong Yugoslavia.

Relations with Neighbouring States.

A considerable advance has been made in the improvement of the economic relations of Yugoslavia with Greece. These relations have always been the basis of their political relations, and the recent introduction of through tariffs on the Salonika-Belgrade railway line certainly reflects an increase of confidence between the two States. Such tariffs were desired by both sides, as a large portion of the goods for Southern Serbia, and even for Belgrade are imported *via* Salonika. Previously there had been no chance of any steps in this direction, as a condition of chronic distrust, especially noticeable in respect of the Ghevgeli-Salonika line and of the Yugoslav Free Zone at Salonika, prevented any practical arrangement. With the vanishing of this distrust new regulations about the Salonika Free Zone were issued which facilitated the lease of premises and stores. Now the introduction of through tariffs will continue still more to the economic *rapprochement* of the two countries.

A branch office of the Yugoslav Post Office Bank will begin to function in Salonika on June 1, and an agreement has been reached with the Banque Franco-Serbe to have all transactions for business done by its office in Salonika.

Most regrettably, relations with Bulgaria have not improved and Yugoslavia was not able to accept the changes in Article 12 of the Covenant, recently proposed by the League of Nations. M. Marinkovitch had to inform the Powers at Geneva that as a sequel of the activities of the Macedonian Revolutionary Organisation he could not in the name of his Government accept the proposed change of the present wording of this Article, as this would deprive Yugoslavia of its last resource, in the event of the recurrence of the outrages and inaction on the part of the League of Nations.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 8.

Blind Leaders of the Blind.

It should help men in their difficult study of the Indian problem, that since childhood they have been familiar with the words, "blind leaders of the blind." That there may at any time be such persons—persons who, though blind, are leading others who are blind—is not a thought that it is hard for men to accept.

In one issue of my newspaper this week there was the text of a letter from the Viceroy, a cablegram reporting a speech of Earl Russell's, a summary of an article in the *Manchester Guardian*, and an article by Mrs. Besant, reproduced from her paper, *New India*. The Viceroy had spoken in his letter of "building a future Constitution for India that may bring greater happiness and prosperity to all her people." One knows that the basic element in the Constitution that the Viceroy was thinking of would be parliamentary institutions. Earl Russell is reported to have said: "We are not going to be deflected from our intentions of dealing quite frankly and fully with the Indian question." We know along what general lines Earl Russell assumes that the question must be handled. He assumes that there must be parliamentary institutions. The only question is how extensive their powers should be. The writer of the article in the *Manchester Guardian* had words about "the prize." We know that prize—parliamentary institutions. Mrs. Besant pleaded in her article for a "six months' Conference between Indians and Britons" that should "frame a Constitution for India, establishing *swaraj*, and thus laying the foundation of a lasting peace." That Constitution would be a parliamentary one. Mrs. Besant would only make the powers of the parliaments more extensive than anyone else.

There is always the same assumption—that there must be parliamentary institutions. If it is a sound assumption, well and good—but what if it is not sound?

The *Pioneer* Letter.

In the *Pioneer* of May 4 there was a letter dated Allahabad, signed "A," covering almost the whole of one page. It ought to be studied by everyone. I will presently give a summary of the writer's views, but let this be said first. In arguing against those who would now endow India with a much greater measure of parliamentary government, one may carry the matter as far as the *ultimate* objection, or it may be considered sufficient for the purpose of some moment to state some objection short of the ultimate one, but sufficient to dispose of the question *for that time*. The ultimate objection to the introduction of parliamentary institutions in India, which is that they cut across the century-old order of Indian society, and inevitably breed unending discontent, would hold good, if India was populated only by Hindus. India is not populated only by Hindus, but by Muslims also, and by Sikhs and others. If at some moment of time the claims of these communities—Hindu, Muslim, Sikh, and the others—are irreconcilable, it is at that time objection enough that they are, if any proposal is made to establish what could only be established peacefully, if the communities' claims had been reconciled. That is objection enough at that time, but it is not the ultimate objection. "A" does not proceed as far in his letter as the ultimate objection. He says that what England is so busy proposing for India is impossible now, because the Indian communities are so deadly opposed to each other at present. If, then, I call attention to "A's" letter, it must be with the warning, that his implication, namely, that, were the Hindu-Muslim-Sikh strife appeased, the way would be clear, is not sound. There would still be the ultimate objection—that parliamentary government would be a wretched failure even in an all-Hindu India, or in an all-Muslim India, or in an all-Sikh India. It would never do, because it is only workable in a country in which, if society is divided into classes, the divisions are not so rigid but that persons may pass from class to class, leaving the fabric unimpaired. In the East the divisions are rigid. That makes parliamentary institutions radically wrong for the East. Those who cannot see that are just blind.

Political Bluff.

There are two possible situations in politics: (1) when you would be prepared to establish a government, if you were certain that you would be able to control it; (2) when you are not prepared to establish that government, because you know that you would have to share the control with immemorial enemies. Your political tactics, your line in the conflict with other persons for whatever political power is going, has been, let us say, to clamour for the government that you would establish, if you were certain that you would have the controlling of it; the government, however, that you are not in actual fact prepared to establish, knowing you would not have more than the partial controlling of it. If a moment in your political life comes, when you are asked to confer with others, your immemorial enemies included, about establishing this very government that you have been clamouring for, when, however, you clamoured without desiring the thing clamoured for, you will have somehow or other to shuffle out of it. You will then, arguing that it is too late, or advancing some other grave objection, begin to clamour for something else. That thing you might still less desire to see established than the first thing.

"A's" Disclosure.

"A's" letter was written for the purpose of the disclosure in it. He states, and as one in no fear of contradiction by any honest, intelligent man (I make him out to be an Indian), that the Congress leaders felt free to demand Dominion status, when the stage only of demanding and clamouring had been reached. When Lord Birkenhead countered them with his: "Draw up your own Constitution, then, and let us see it," and much more later, when the Viceroy offered them the Round Table Conference, they had to admit amongst themselves that India's being so hopelessly divided against herself made Dominion status impossible. They had, then, to refuse the Viceroy's offer, but not so that it should be seen why they refused it. Their best way of doing that was to say: "It is too late; for now we want independence." To demand that made them even more certainly the extremist Party in Indian politics, and their cue is always to be that.

"A" does not appear to be aware of the ultimate objection to parliamentary government in India (I was told of it by the late Sir Asutosh Mookerjee); for he has this passage in his letter: "If Mahomed Ali wants 'peace in our time' in India, it is to the leaders of the Mahasabha, and not to the Viceroy, that he must address his letters. If Mr. Patel, instead of writing foolish letters and making demagogic speeches, would devote himself to arranging a confidential meeting between a few of the Muhammadan and the Mahasabha leaders, and would preside over that meeting and play the part of Bismarck's 'honest broker,' he might yet make a name to be proud of in Indian politics."

There *is* the ultimate objection. Parliamentary government is a cursed thing in India.

Party Strife.

Mr. Morshead's article, "The Situation in India," the first instalment of which appeared in THE NEAR EAST AND INDIA of April 17 (the continuation is awaited here with deep interest), shows the kind of power to see deeply into the Indian tangle that is a requisite of anyone whom it would be reasonable to ask us to trust, he being "the man on the spot." It is unreasonable to ask us to trust anyone

Digitized by Google

who, at this late time of day, is found still believing that the grant of a fuller measure of parliamentary government to India would "bring greater happiness and prosperity to all her people," to quote the Viceroy's words again. To any philosophic student who has really put his mind into his analysis of the Indian tangle, there is sheer pathos in the thought that the two men with most immediate power in Indian politics—the Secretary of State and the Viceroy—should have been in consultation last August about the wording of an announcement to be made immediately on the Viceroy's return to India, and that they sincerely believed that *that* announcement—that the goal of Great Britain's policy in India was Dominion status as soon as it could safely be given—would bring peace. It inevitably brought a sharper sword. It was insensate to introduce into India public life the type of political Party strife that is only roobed of its poison in England through the Englishman's deep and sure practical sense; the sense that dictates that the things that matter enormously to England—foreign politics, Indian affairs, etc.—should not be Party questions. To introduce that strife into a country in which there is not an atom of that sense; a country, besides that, divided into Hindu, Sikh, Muslim, etc., was just insensate. There cannot ever be peace and greater happiness in India, until the mistakes of the past have been undone. If a man can do not more than tell England so, he must do that.

Gandhi's Second Letter.

Gandhi's second letter to the Viceroy will have ceased to be a nine days' wonder before these words are set up in type; so I may deal with it briefly. The veil of hypocrisy is thinner this time: the hatred is less thinly veiled. What but hatred of the diabolical kind could have put it into the man's head to say that his "dear friend" could "prevent this raid" in three ways, one of them being *goondaism?* A *goonda* is a hooligan. Gandhi's using such language to the most deeply respected Englishman in India, the King's representative, too, is in keeping with his having used such impudent language to the Viceroy on December 23, that when my friend, an Indian, who was once a member of the Executive Council, was given it to read in the confidential, verbatim report I have told you of, he went hot and cold with shame. This man will deliberately incite persons to break the law of the land, setting the example himself, meaning to force the Government to arrest persons; that, when they are arrested, he may fan what resentment there already is in the people into a flame. When persons have been so led into extremer acts of law-breaking, and have been more severely punished than the others, Gandhi will say: "Look, what a vile and odious Government!" The sentimentalists believe in this man's sainthood. We are at least near the end of that poor imposition.

INDIAN EMPIRE SOCIETY.

A non-party organisation, with the primary object of informing public opinion concerning India, with particular reference to the findings of the Statutory Commission, has been formed by a group of former Governors of Indian Provinces with the title of the Indian Empire Society. THE NEAR EAST AND INDIA understands that the new body will render all possible support to such recommendations as in the opinion of its members make for "peace, order and progress" in India, "reserving to itself at the same time the right, should occasion arise, to draw public attention to any recommendations which appear to endanger the fulfilment of primary obligations."

Lord Sydenham, Lord Meston, Sir Michael O'Dwyer, and Sir Reginald Craddock are acting as a provisional committee, and Sir Mark Hunter, 12, Ashburn Gardens, S.W.7, is undertaking the duties of provisional secretary. Among those who have promised support are the following:—

The Duke of Bedford, the Duke of Northumberland, Viscount Lee of Fareham, Lord Ampthill, Lord Carson, Lord Danesfort, Lord Lamington, Lord Summer, Lord Sydenham, the Maharaja of Burdwan, Sir R. Mitchell Banks, M.P., Mr. John Buchan, M.P., Colonel A. England, M.P., Colonel C. K. Howard-Bury, M.P., Major-General Sir Alfred Knox, M.P., Sir Charles Oman, M.P., Sir Walter Preston, M.P., Field-Marshal Sir Claud Jacob, Lieut.-General Sir George MacMunn, Sir Hugh Barnes, Sir H. S. Lawrence, and Sir Verney Lovett.

INDIA'S ECONOMIC PROGRESS.

With a sea-borne trade, which in 1928-29 amounted to £445,000,000, the material prosperity of India is of considerable importance to the rest of the world. The present time is not, therefore, an inopportune moment to survey the position reached after roughly three-quarters of a century of British effort to open up the country and develop its resources. There are few, if any, authorities better qualified to undertake such a task than Sir Alfred Chatterton, who in a paper read before the East India Association on May 21, dwelt particularly on the experience of the past twenty-five years during which the most strenuous efforts have been made in India to develop the internal resources of the country and to introduce modern methods of manufacture and production. Sir Maneckji Dadabhoy presided.

In the course of an instructive analysis of the principal economic changes, as measured largely by the external trade returns, Sir Alfred estimates that industrial activity has probably increased threefold. Even now, however, he pointed out, only one per cent. of the total population are engaged in modern industry, and it is fairly certain that they and their direct dependents (less than 10 million souls in all) enjoy the major portion of the increased annual income. Meanwhile the extension of the area under cultivation has barely kept pace with the increase in the population.

The growing preference for the absorption of gold, in place of silver, which now means that nearly 30 per cent. of the world's production permanently disappears from active circulation, is the subject of a very interesting suggestion. "There is no mystery," Sir Alfred remarks, "about this matter. It is well known that marriage dowries and gifts to wives in the form of ornaments are the main reason for this demand for gold, and it is, therefore, necessary to explore the prospects of alternative methods of providing personal property for women (*stridhanum*) which are less objectionable from an economic standpoint. The habit of hoarding is a relic of the days when property was unsafe, and it has persisted in India much longer than it need have done owing to the Hindu laws of inheritance, which came into existence in the days when the precious metals and jewels were the only forms in which wealth could be invested and hidden away for safety. In the undivided family women enjoy very limited rights in the common property, and widows are only entitled to maintenance from the family estate. Nevertheless they retain control of their *stridhanum* and it is but natural that until the legal range of their possessions is extended they will encourage their husbands to add to their hoards."

The remedy, in Sir Alfred's opinion, is plain. "Give the women the right to be independent holders of Government paper, Post Office Saving Certificates or fixed deposits in recognised banks, all yielding interest, and there is reason to believe that they will welcome such opportunities to obtain an income provded they can be assured that there is no risk of loss, and that the property is as much under their control as the contents of their jewel boxes." While recognising that there will be many difficulties in bringing home to the masses the advantages of his somewhat revolutionary proposal he does not believe that they are insuperable or that legislation on such lines, being entirely permissive, would be likely to meet with serious opposition. We think that the lecturer is a little optimistic in this belief, but there is no doubt that the marriage dot casts a shadow over Hindu domestic life which would be greatly lightened if it could take the form of interest-yielding securities. Government paper might be issued, as he suggests, in the form of special certificates, which could only be held by women, the bonds being maintained at their par value by confering on them the privilege of redemption at any Government treasury on due and prescribed notice.

INDIGENOUS BANKING IN INDIA.*

The system of indigenous banking in India is of immemorial antiquity, and its importance has hardly been lessened by modern conditions. If the indigenous bankers no longer finance the State, particularly in its military operations, as they did down to the eighteenth century, they are still required to finance the agriculturist and the urban worker. Indispensable as they have been, and are, this system hardly constitutes banking as understood in the modern monetary world. The bankers have not invited, and have seldom accepted, deposits: they have been in the main moneylenders, and have incurred all the obloquy that attends usury. India has, however, been always a land of greedy borrowers as well as money-sucking lenders: and, as the author of "Indigenous Banking in India" points out, every country has passed through its stage of usury. In India, the evil has been increased by the stringency of the Civil Courts, the obsolescence of healthy indigenous restrictions such as the principle of *damdopat*, and the growth of petty exactions, originally extorted in the name of charity, but always at the expense of the borrower. Mr. Jain stresses the unfortunate division of interests which has separated the indigenous from the foreign banking system. As a result there have been two separate money markets, the Bank and the Bazár, with two entirely distinct money rates.

The lack of education is the great obstacle for the reform of the money lending system: and the main gleam of hope in an otherwise cheerless outlook is the comparative success of the Co-operative Movement. Mr. Jain does not disguise the fact that it has met with great success only in the Punjab and in Bombay, and that it has many weaknesses, among which must be reckoned its dependence on the State, and on the initiative of such officers as Mr. Strickland. Even in places, however, in which its progress has been slow, it has had a healthy moderating effect on the moneylenders, and Mr. Jain rightly emphasises the need for greater support for the movement from the Imperial and Joint Stock Banks, particularly in the financing of Land Mortgage Banks, by which alone the existing burden of debt can be redeemed. Mr. Jain gives an adequate account of the uses and limitations of the Imperial Bank of India, and indicates clearly enough the necessity for the Reserve Bank which Sir Basil Blackett attempted to establish. He strongly advocates the creation of new indigenous banks formed in the first place in the villages and small towns on the basis of the existing moneylending firms' capital and skill, and linking up with the Joint Stock Banks and the Imperial Bank. He admits the initial difficulties, but regards the scheme as an essential portion of the movement for national development.

Perhaps the most pleasing, and not the least useful, feature of an excellent treatise on a subject which has not yet received the attention it deserves in the study of Indian economics is its entire freedom from racial bitterness and national self-consciousness. The author concludes: "Let us not be obsessed by the remembrance of our past greatness. Dreams of the past golden age are beautiful, but are of no avail except in so far as they inspire us to action. We cannot live in the past. What is required is sound constructive work keeping pace with the march of progress." Would that all Indian writers were equally sane and constructive!

* "Indigenous Banking in India." By L. C. Jain. (London: MacMillan and Co., Ltd. 15s. net.)

CORRESPONDENCE

THE PROBLEM OF INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—We may find an apt parallel to the conditions obtaining in British India to-day in Gibbon's "Decline and Fall," showing the persistency with which history repeats itself. The Gauls had forgotten that the protection of Rome had delivered them from internal discord and from foreign invasions. Instead of exercising the full rights of conquest, Vespasian reminded them, the Republic had been content to impose only such as were required for their own preservation. "Peace," he said, "cannot be secured without armies, and armies must be supplied at the expense of the people."

Now, one of the manufactured grievances of the "Independence Party" of British India is the cost of the Indian army, which they pretend to believe is but an army of occupation representing their conquerers. The truth is, of course, that the Indian army is constituted chiefly as a defence against foreign aggression, particularly that which from immemorial times has threatened the North-West Frontier. Outside this employment, the army of India has been used almost exclusively as a police force by means of which the warring elements of the mixed population have been kept in restraint, and order maintained amongst the 250 millions of diverse races and creeds that dwell within the confines of British India.

The most important of the Indian Native States maintain armies of their own; these have always been at the disposal of the Government when India has been menaced either directly by her immediate neighbours or indirectly by the enemies of the Empire.

In the blackest period of the Mutiny the Indian Princes rallied to the support of the British Raj, and the debt of gratitude which we owe them for their loyalty in those dark days must not be forgotten when, as will surely happen, the nationalists of British India seek to modify the relationship of the Princes towards the rest of India, towards the Empire and, by no means least, towards the Throne itself.

We at any rate should never forget that the Crown has unequivocally declared that the rights, dignity and honour of the loyal Native Princes shall be maintained unimpaired—a pledge which our present King has re-affirmed and pronounced to be "inviolate and inviolable."—I am, etc.,

A. E. RITCHIE.

PERSONAL AND GENERAL

TO-DAY

May 29, 1930 (New Style).
May 16, 1930 (Old Style).
Muharram 1, 1349 A.H., of the Muslim Calendar.
Sivan 2, 5690, of the Jewish Calendar.
Khordad 8, 1309, of the Persian Calendar.

Baroness Gray arrived at 73, Pont Street on May 23, from Greece.

General Sir Alexander Cobbe, V.C., was received by the Prince of Wales at St. James's Palace on May 20.

Lord Meston returned last week to 38, Parkside, Albert Gate, from Hurst, Cookham Dene, Berkshire.

Lady Leighton arrived in England from Basra on May 19, and has returned to Loton Park.

Sir Norman Bolton, formerly Chief Commissioner for the North West Frontier provinces, arrived at Plymouth on May 22 from India, and is staying at 66, Princes Gate.

Sir Hamilton and Lady Grant, who have been on a visit to Yugoslavia, returned to 59, Onslow Square on May 25.

The Palestine Arab Delegation, who held a Reception at the Hyde Park Hotel on May 20, left Victoria for Jerusalem on May 23.

Sir John Hope Simpson, who is conducting an investigation into problems of land, immigration, and development in Palestine, arrived in Jerusalem on May 20.

Sir Thomas Arnold, who has been spending the winter months in Egypt, is now on his way home from Constantinople.

Lieutenant-Colonel Sir Stewart Symes arrived in London from Aden on May 22, and has joined Lady Symes at 6, Tor Gardens, W.8.

Sir Arthur and Lady Hirtzel and the Misses Hirtzel arrived yesterday (May 28) at 30, Ennismore Gardens, which they have taken for a week for Miss Ruth Hirtzel's marriage on June 3.

The Maharaja of Tripura, accompanied by Lieutenant-Colonel Owen C. Pulley, Rana Bodh Yung Bahadur and suite, has arrived at Grosvenor House, Park Lane, for the season.

A farewell reception was given on May 22 by the Near and Middle East Association at the Hotel Splendide, in honour of Kazim Pasha, the Grand Mufti and the members of the Palestine Arab Delegation.

Professor D. S. Margoliouth will read a paper before the Royal Asiatic Society, 74, Grosvenor Street, on June 19 at 4.30 p.m., entitled "Sidelights on Islamic History and Customs in the Fourth Century A.H."

Major Clement Richard Attlee, who has been appointed Chancellor of the Duchy of Lancaster, in succession to Sir Oswald Mosley, served in the Great War in the South Lancashire Regiment and the Tank Corps, and took part in the Gallipoli campaign. Subsequently he was severely wounded in the attempt to relieve Kut.

Field-Marshal Sir George Milne will preside at the ninth annual dinner of the Salonika Army and Black Sea Forces, which will take place at the Café Royal on June 20.

The Secretary of State for the Colonies announces that Lieut. J. H. Elwes, Lieut. R. F. Jayne, Lieut. W. A. Rice, and Lieut. J. M. Sinclair, have been appointed Company Officers, Trans-Jordan Frontier Force.

Sir Percy Loraine, Bt. (High Commissioner for Egypt and the Sudan) had an audience of the King at Buckingham Palace on May 20. Sir Percy was also received at St. James's Palace the same day by the Prince of Wales.

It is announced in the *London Gazette* that the King has, by Letters Patent dated May 16, conferred the dignity of Knighthood upon Mr. Norman Wright Kemp, Puisne Judge of the High Court of Judicature at Bombay; and Mr. Harisanker Paul.

Monsieur N. Titulescu, Roumanian Minister to the Court of St. James's, left London on May 23 for Roumania in response to a telegram from his Government. His stay in Bucharest will coincide with that of M. Loucheur. He expects to be back in London by June 3.

Mr. L. Martin Leake, H.M.'s Vice-Consul at Port Said, went on short leave to Italy early in May. On his return he expects to go to Suez to relieve Mr. Williamson Napier, who proceeds to Port Said as Acting Consul during the absence, from June 15, of Mr. L. H. Hurst.

THE CENTRAL ASIAN SOCIETY.

The Anniversary Meeting of the Central Asian Society will be held on June 11 at the Royal Society's Hall, Burlington House, W.1. At 4.15 p.m. the Honorary Secretary will read his Report, the Hon. Officers and Council for 1930-31 will be elected, and the Chairman will review the past year. At 5 p.m. Lord Thomson will deliver a lecture on "The Development of British Aviation in Asia."

SHADWELL PRIZE AWARDS.

The Shadwell prize for 1929 has been awarded to Lieutenant-Commander R. K. Dickson for his survey of Zante Harbour, while serving in H.M.S. Cardiff.

A second prize has also been given to Lieutenant D. H. Sacker for his surveys of Arabi and Farsi Islands, Persian Gulf, when in H.M.S. Triad, and Lieutenant K. Mackintosh receives commendation for his survey of Khor Yiti carried out while in H.M.C. Crocus.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE. Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras, with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

Conservatives' Dissensions.

It has become increasingly obvious that the Baldwin-Beaverbrook pact on the subject of Empire Free Trade was a futile gesture, or, rather, that the word Referendum, would prove a curse more than a blessing. Lord Beaverbrook, indeed, roundly accuses the official Conservatives of cowardice in their adoption and subsequent treatment of the Referendum device; they are, he asserts, still pursuing a useless policy of "Safety First," and are employing the Referendum rather as a protective "shield" than as a spear. There seems, in short, little doubt that the Empire Free Traders are thoroughly restless, and it would cause no surprise if they once more dissociated themselves from the official Conservatives.

Last week in the Lords the difference between the two sections could be clearly seen, in a debate on "Safeguarding, anti-dumping, and Imperial Economic Unity." Whereas several Peers spoke warmly in favour of Lord Beaverbrook's ideals, Lord Salisbury, for the official Conservatives, described the "immediate need" as a "new spirit in industry," and asserted his belief that the country has great hesitation over the matter of food-taxes—a subject which Lord Beaverbrook thinks the Conservatives ought to tackle as eagerly as a bull at a gate. The real difference, of course, is this: that Mr. Baldwin and his officials do not believe that Empire Free Trade is practical politics, however much lip-service be paid to the ideal, and that the best policy is merely a continuance of scientific Safeguarding. They do not wish altogether to lose Lord Beaverbrook, however; and so contrive to sit on the fence. But this unfortunate posture cannot last long: it will be proved to be too cutting.

A Political Sensation.

For a few days last week there was a political sensation over the resignation of Sir Oswald Mosley on the question of the Government's policy on unemployment. The importance of the incident was absurdly exaggerated; for a time, indeed, there was talk of the Government's defeat in the House and of another General Election very shortly—which latter certainly no one wants.

Yet it cannot be denied that the country, and perhaps more especially the Labour Party as a whole, are uneasy about the Government's handling of the unemployment problem. Sir Oswald gained only 29 votes in his criticism of the Government, it is true; but there is a very general feeling that Labour supporters are not satisfied that all possible is being done to alleviate the terrible position. They are loyal to their leaders, but they are undeniably anxious.

The trade union leaders are calling for bigger measures; the *Daily Herald* itself urges the Government to "look closely once again at the possibilities of large scale national work." It is, indeed, among the Labour Party itself that most criticism, if only muttered criticism, is heard: the country at large seems rather to admire the Cabinet for not allowing itself to be rushed into any wild-cat schemes involving unproductive expenditure.

Archbishop Davidson.

There is little of the formal insincerity, perhaps too usual when "national" men die, over the passing of Lord Davidson. For, whatever one's own tendencies may be in ecclesiastical matters, one had to recognise that in this fine old man there was not only the comprehensive Churchman, who believed that elasticity was the essence of the Anglican faith, but also the statesman who was not afraid to take the unpopular course. Despite all that is said, one does not expect Archbishops to be broad-minded, but to the end Dr. Davidson avoided narrowness. Nor is it fair to suggest that his broad-mindedness was the outcome rather of diplomacy and shrewdness than of conviction. No one who knew him ever doubted his real feeling on the various matters with which he had to deal, even though he dealt with them judiciously and with dignity.

He was, in short, the kind of man whom we like to think of as typical in the Church of England. One of the old school, he reached out with eagerness to the new, not necessarily to embrace it, but to understand it. He will, I think, become an historical figure.

Standardisation.

The process of standardisation in the towns, whether it apply to shops, theatres, jazz music, and so on, is to be expected, and is, I suppose, just tolerated; it is however, almost wholly deplorable when it extends to the countryside. The horrors of the petrol pump are well known, but now come signs of another monopoly breaking in on our "coloured counties."

I refer to the inn signs. In the good old days, there used to be a multitude of different signs—whether of white horses, or men loaded with mischief, or cricketers, or dolphins. Now the tier of the tied house insists on still further evidence of his ownership and is putting up a meaningless symbol of his authority.

Why should the big breweries do this? It suggests merely the pomp of power, and will certainly not be to the liking of the individualistic Englishman. How can you ask anybody to have a drink at one of So-and-So's Houses, where before you went to the Red Lion or the Green Dragon?

A Cricket Burlesque.

One had thought that, for sheer absence of the true spirit of cricket, reference had to be made to the Test Matches. Last week, however, there occurred an incident in a country match, between Hampshire and Notts., which showed how the letter can triumph over the spirit.

When time (including, certainly, an extra half hour, that can be claimed) was called on the second day, Hampshire needed one run to win with five wickets to go. Presumably—one does not know for certain—the captains would not agree to finish the game then and there because it was just possible that rain might make further play out of the question and so provide points for both sides, instead of for only the winning side, in the Championship Table.

All that the ordinary fellow can say is, that if the Championship were won by the adoption of such methods, it were better destroyed or lost. This sort of thing reminds one too much of "kicking-out" tactics in Professional football, when time is "the essence of the contract."

Book Reviews

A GREAT ADVENTURE.

"THE AYESHA: A GREAT ADVENTURE." By H. von Mücke. Edited with an account of the Adventures of the Emden, by J. C. Lockhart. With illustrations. (London: Phillip Allan & Co. 7s. 6d.)

Memories of the War grow dim, but there can be no one who was living in the East in 1914 who will ever forget the exploits of the Emden, her wonderful raids on Allied shipping, her being surprised by the Sydney near Cocos Keeling, and her destruction by the Australian vessel. Yet though many will have heard of the story of the Emden's landing party on Direction Island—to wreck the wireless installation—and of their remarkable return by sea and land to Germany, few will have realised quite how remarkable was the feat accomplished by von Mücke and fifty other Germans.

When the Emden had hurriedly to leave Direction Island to cope with the attentions of the Sydney, the German Party under von Mücke resolved, once they were certain that the Emden would return no more, to attempt to escape in the Ayesha, an English yacht that had been used to carry copra from Keeling to Batavia two or three times a year. The risks they were running were tremendous, but the party were obviously sailors of iron resolve, who really deserved all that luck could bring them. How they got, first to Padang, and then to Perim cannot be told here: suffice it to say that the story makes excellent and thrilling reading.

The making of their way up the Red Sea makes a marvellous story. They landed at Hudaida, not one of the party knowing a word of Arabic, and succeeded in convincing the Arabs that they were friends of the Turks. Von Mücke had thought of getting home from Hudaida *via* the Hijaz Railway—so limited was his knowledge of Arabia. He decided, nevertheless, to attempt the way back overland. At Hudaida, however, his men fell sick, and the party went for a while to Sanaa, *via* Menakha, in a vain search for health. Von Mücke then resolved to work northwards in *sanbuks*, the Arabian sailing boats. So they went on to Qunfuda and Al Lith. They suffered shipwreck on this part of the journey, and near Al Lith they were attacked by Arabs. Finally, however, they got through to Jidda, went thence by *sanbuk* to Rabigh and Wajh, and entrained at Al Ala. Thence the journey was comparatively safe, *via* Damascus, Aleppo, and Haidar Pasha.

It really is an astonishing story, not for any literary merits in its telling, but for the sheer adventure, the pluck, and the resources experienced and displayed. The tone of the book is, perhaps, a little Prussian, but it was written during the War in the consciousness that a very heroic action had been performed. Von Mücke's mistakes of fact are comparatively few, and in any case the careful Editor has indicated where the author's statements must be accepted with reserve. It is difficult to see, however, how the sentence: "Our way northward (from Jidda) took us past Mecca" could be passed.

But to cavil with details would be ungrateful: here is a story well worth reading, for, once read, it will never be forgotten.

TWO NOVELS ON INDIA.

"THE FLYING FIRS." By A. M. Westwood. (London: Hurst and Blackett. 7s. 6d.)

"THE WISHING STONE." F. F. Penny. (London: Hodder & Stoughton. 7s. 6d.)

"The Flying Firs" contains so many dramatic incidents that it might have been merely an adventure story. But, after reading it, one has the impression of a quiet, thoughtful story, written with a deep concentration of interest in the chief characters. Ivy Myrtle, who was English by birth and who was brought up by a Eurasian family in India, and who in the end finds love and happiness in the Highlands, is a very real and attractive person. The missionary who befriends her is a figure of true and charming goodness. The Indian part of the work is perhaps more convincing than the second half in Scotland, but the whole story is of unusual interest.

"The Wishing Stone" belonged to a girl, who had native blood and who fully believed in its magic powers. Dick Dangerfield met her when he went out to India, having quarrelled with his wife. We have him reconciled to his wife and with the magic stone lost. The slender plot serves as an excuse for Mrs. Penny to give us some vivid pictures of Southern India. J. B. A.

UR OF THE CHALDEES.

Mr. C. Leonard Woolley lectured to a joint meeting of the Royal Asiatic Society and the Central Asian Society on May 21, upon the results of last season's excavations at Ur of the Chaldees. Sir Percy Cox presided over an unprecedentedly crowded gathering.

Mr. Woolley said of the last season—the eighth expedition—that though it provided no such spectacular objects as were found in previous years in the Royal Tombs at Ur, it had in some ways been the most varied and exciting. For the expedition was able to get at the sites of buildings illustrating every phase from the sixth century B.C. to the dateless period before the Flood. The three main objects of the expedition were to clear up the plans of Ur's ancient walls and fortifications, to continue the work in the cemetery, which was now completed, and to enlarge the work already done in investigating the civilisation before and immediately after the Flood.

With the aid of numerous lantern illustrations, the lecturer told the story of the findings and particularly that of the various civilisations in layers. This season the expedition, employing many more men than previously, had excavated a pit 25 yards by 16 yards in width, which brought them down through the eleven feet of sand deposited by the Great Flood, to what was in fact "the bottom of Mesopotamia." Starting at surface ground dated 2,300 B.C., the excavators dug down through eight successive series of buildings. In each case the floors remained over the whole area, definitely separating the crockery and other remains of one period of the city's civilisation from those of another, so that it was possible to fix quite accurately the successive stages in history. All the way down the buildings excavated were of good quality, and the fact that some of them had walls fourteen feet thick indicated that each of the levels had enjoyed a long existence.

Speaking of the bottom of Mespotomia, Mr. Woolley said that there must have been an island settlement there. He believed that the survivors of the Flood occupied the land afterwards as they had done before—the pre-Flood and post-Flood civilisations were one—but there were signs that they were weaker and degenerate, and soon died out. In none of the Royal Graves excavated by previous expeditions had any articles been discovered that seemed to have any religious significance, but fifty feet below the denuded ground they found strange figurines of green clay with human female bodies and inhuman heads that probably represented goddesses or demons. These figures—perhaps the most remarkable discovery of the season—must have a religious significance in the graves of the earliest inhabitants of Mesopotamia: they were the first discoveries which could definitely be linked up with religion. In conclusion, the lecturer claimed that, as a result of last season's working, a complete key to the history of ceramic art in Sumerian and Babylonian times had been provided.

After the lecturer both Sir Frederick Kenyon and the Chairman complimented Mr. Woolley upon his skill and endurance. Sir Frederick hoped that the collection of objects which the lecturer had brought home this year would be ready for exhibition in the British Museum at the end of June or in early July; and Sir Percy Cox reminded the audience that Mr. Woolley had consented to speak on behalf of the Gertrude Bell Memorial Fund at the Central Hall, Westminster, on June 3.

NEWS IN BRIEF.

A slight earth tremor was felt in Jerusalem on May 21, and a similar shock was reported from Nablus.

Turkey has ratified the Franco-Turkish Pact of Friendship and the Turco-German Commercial Treaty.

Professor Ernest Gardner has been appointed Yates Lecturer in Archæology at London University for the session 1930-31.

The strike of Jews in Palestine as a protest against the suspension of immigration began at noon on May 22 and lasted until midnight.

M. Bogdan Medakovitch, one-time President of the Croatian Diet and leader of the Serbo-Croatian coalition, died in a Vienna nursing home recently at the age of 74.

The Turkish Grand National Assembly in Angora last week voted the Budget for 1930-31.

Troops returned from the war area near Dessie were reviewed in Addis-Ababa on May 22 by the Emperor of Abyssinia.

Owing to the discovery of suspected cases of cholera, quarantine regulations have been applied to Al Tor, the port on the south-west coast of Sinai, to pilgrims returning from Mecca.

The death occurred last week in Venice of the Rev. Philemon Moore, formerly Professor of Hellenistic Greek at Carmarthen Presbyterian College and London University (where he graduated).

The Emperor of Abyssinia has taken delivery of a new motor-car, built to his order. The car is a Rolls-Royce "Phantom II." A mechanic went with it to teach the Royal Chauffeur how to look after it.

Major H. J. Bensted, having terminated his appointment with the Egyptian Government as Chief Bacteriologist, is taking up an appointment as assistant professor at the Royal Army Medical College, London.

Heavy rains have flooded 500 houses in Bucharest, and several provinces of Roumania are seriously flooded. More than 1,000 persons have been rendered homeless and telephone communications have been interrupted.

A motor-car ordered by the Shah of Persia from an American company arrived at Cherbourg on May 5 in the Minnetonka. The car's fittings are encrusted with gold and precious stones, and bear the Royal monogram.

Sir Sainthill Eardley-Wilmot, K.C.I.E., of Tollgate College, Henley-on-Thames, formerly Inspector-General of Forests in India, died on November 13, aged 77, leaving estate of the gross value of £17,337, with net personalty £17,168.

Locusts have been causing some concern in the south of the Sinai peninsula, where the work of destroying them is difficult because of the mountainous character of the desert; £100,000 has already been spent on the campaign against the pest in Egypt.

There was a sudden and serious invasion of locusts last week in the hopper stage in Southern Palestine. A police motor-lorry equipped with wireless has been used to report on the movements of the locusts, and a barrier 18 miles long was erected at one point.

The exhibition of modern Yugoslav sculpture and painting at the Tate Gallery is to be extended till June 9. Over 25,000 people have already visited it. A collection of the exhibits will afterwards be shown at Leeds, Bradford, Swansea, Manchester, and possibly in Scotland and Ireland.

The Church of Scotland Jewish Committee has decided to close its educational and other missionary activities at Constantinople at the end of the present term, the Turkish authorities having imposed conditions which make further missionary work there impossible.

A message from Simla on May 21 announced the death, after an operation, of Colonel Charles Robert Lloyd, D.S.O., Deputy Director of Transport until early in 1921. He was appointed A.A. and Q.M.G. in India in 1925 and a Deputy Director of Supplies and Transport in 1928.

M. Milosh Savchitch, Mayor of Belgrade, and the Deputy Mayor were last week dismissed by Royal Decree. M. Milan Neshitch, a University Professor, and M. Nikola Krstitch, President of the Belgrade District Court of Justice, are being appointed in their places.

King Fuad has conferred a number of Egyptian honours on British subjects, including Lord Moynihan, who receives the Grand Cordon of the Order of the Nile; Sir Kynaston Studd, ex-Lord Mayor of London, Order of the Nile, 2nd Class; Sir William Waterlow, Lord Mayor of London, Major W. G. Coxen, and Dr. D. G. Collins, 3rd Class.

The Latin Patriarch of Jerusalem, as Lieutenant of the Grand Magistracy of the Order of the Holy Sepulchre, has conferred the Grand Cross of that Order on Admiral Horthy, Regent of Hungary. As the Regent is a Protestant a special dispensation was necessary before the honour could be conferred on his Serene Highness.

News has been received in Istanbul of the death at Etchmiadzin, in the Caucasus, on May 9, of Mgr. George V., Catholicos of all the Armenians, in his 83rd year. The Catholicos of Etchmiadzin is the hierarchical head of the Armenian Church, both the Patriarchates of Constantinople and Jerusalem being subject to his spiritual jurisdiction.

The death occurred on May 22 at the Victoria Hospital, Cairo, from typhoid, at the age of 28, of Mr. Geoffrey Richard Arthur Herbert, Second Secretary at the British Residency at Cairo. Mr. Herbert, who had previously served in the British Legation at Sofia and at the Foreign Office, was the eldest son of Mr. and Mrs. Arthur Herbert, of Cahirnane, Co. Kerry.

Air Vice-Marshall Edgar Rainey Ludlow-Hewitt, C.B., C.M.G., D.S.O., M.C., now Commandant of the Royal Air Force Staff College, has been appointed Air Officer Commanding, Iraq Command, as from October next vice Air Vice-Marshal Sir Robert Brooke-Popham, K.C.B., C.M.G., D.S.O., A.F.C., on the latter terminating his three years' appointment.

The pilgrim ship Asia, which caught fire in harbour at Jidda on May 21 when 1,500 pilgrims were on board, was completely wrecked. The death-roll was over 112, and bodies were still being recovered from the sea and the adjacent roofs at the beginning of this week. The crew were all saved. The surviving pilgrims left Jidda on May 24 on board the Belgrano. The Governor of Jidda held an inquiry into the disaster.

The council of the All-India Muslim Federation passed a resolution in Bombay on May 21 that if the "just demands and rightful claims of the Arabs in connexion with Palestine were not favourably met the feeling among Indian Muslims would become graver and it would be more difficult to control the masses any longer." The resolution urged the Viceroy to "place the views of united Muslim India on the subject before the British Cabinet."

Squadron Leader Peter Warburton, M.B.E., who for the past year has been engaged on Air Staff (operations) duties at the R.A.F. Headquarters in Iraq, has taken up the post of Inspector of the Iraq Air Force at the Ministry of Defence, and has been seconded for duty under the Iraq Government. Squadron Leader Warburton held a commission in the Royal Garrison Artillery, T.A., before being transferred to the R.F.C. in April, 1917, when he was appointed to No. 9 Squadron. Later in the War he served at the Wireless School, Winchester, and the Artillery Co-operation School, Worthy Down, and was appointed M.B.E. in June, 1919. He has attended courses at the Staff College at Quetta and Andover, and served at the Air Ministry from 1921 to 1926.

The will of Ahmed Qajar, the late Shah of Persia, who was deposed in October, 1925, was filed for probate in New York on May 23 owing to his property being in America. Among the bequests are an annuity of £1,200 to the late Shah's brother, Prince Mohammad Hassan Qajar, and a supplementary income for ten years for the education of the two sons of Prince Hassan. Saleh Khan, who was the late Shah's secretary during his exile, will receive £4,000. Ahmed Qajar's mother is left all the deceased's real estate in Persia, half of his jewels, and one-sixth of his securities. The residuary estate is to be divided among his three daughters and his only son, Prince Freydoun. His eight wives are left annuities of £200 each.

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Anglo-Egyptian Oilfields.

At the meeting of the Anglo-Egyptian Oilfields Sir Reginald MacLeod, the Chairman, was able to give a most satisfactory account of the position of the company. As I mentioned last week, the production, obtained from the Hurghada field, was a record, the total of 267,244 tons representing an advance of about 3,000 tons on the figures for the previous year. Sir Reginald MacLeod expressed the view that there is no reason why the present prosperity of the company should not continue. The Hurghada field, he pointed out, is bound to have its limits, but there is so far no indication of exhaustion, and the developments in the eastern extension of the field promise further potential production. So far the company has not been fortunate in its exploration work in outside areas, and it is to be hoped that a better fate will attend its investigations in Somaliland. The work of the geological survey in that country is now practically completed, and the results obtained by the geologists will shortly come before the Board. It may be that in Somaliland the company will find the additional oil resources for which it is looking.

Kassala Cotton Company.

The period covered by the report of the Kassala Cotton Company saw the conclusion of the work of development on the company's original concession area in the Gezira. The work was completed in the first half of the year, and in the second half of 1929 15,500 feddans were planted in cotton, and of these 15,100 feddans carried a crop to maturity. The picking is now being carried out, and it is very satisfactory to know that the quality and yield are satisfactory. The Sudan Government have agreed to the company's taking an additional 15,000 feddans, making the whole concession area about 60,000 feddans. The company's revenue for the year again consisted of interest, together with the commission on the marketing of the 1929 crop from the Gash area. The net profit was £2,568, and adding the balance brought forward and deducting debenture interest, a balance of £37,921 remains, which is to be carried forward.

A Railway for Afghanistan.

The news is forthcoming that the important railway contract given by ex-King Amanullah to a German firm has been confirmed by King Nadir Shah, and that a party of engineers will shortly leave Germany for Kabul. If this report proves to be well-founded, it will constitute a development of the first importance. Hitherto railways and Afghanistan have been strangers to one another, and the lack of communications has been the greatest obstacle to trade development with that country. Through railway communications would entirely alter the position. The proposals put forward by the German firm provided for the ultimate construction of 900 miles of railway, the first line to be constructed being from Kabul to Jalalabad, with a subsequent extension to Torkham and later to Peshawar. Thus the Indian trade would first be provided for, and it was proposed later to link up Kabul with Kandahar and Herat and thence with the Russian railway system at Kush. Obviously if the contract is to be carried out it will be a long time before the completion of the full programme, and in view of the exceptional difficulties presented by the terrain in Afghanistan it may well prove that the cost of the construction of the lines will entail very important modifications in the scheme.

British Trade with Egypt.

At the recent general meeting of the British Chamber of Commerce of Egypt Sir Henry Barker, President of the Chamber, dealt in detail in his report with the new tariff and other developments of the year. He said that in his view a judicious revision of the old *ad valorem* tariff would have been more efficacious, while it would have been infinitely less upsetting to the trade of the country. He added that it has yet to be shown how far the new duties will impair the country's purchasing power. It has to be borne in mind, however, that the new Customs Law is provisional, and it may be taken for granted that the Egyptian Government will lose no time in modifying it if it should be shown that its effects are other than those contemplated. Dealing with the trade of the year, Sir Henry Barker remarked that it might be some consolation to note that the British contribution to Egypt's imports was no less in 1929 than in the previous year, but he thought he was right in saying that it had never been smaller. His view that more could be done if our manufacturers would study the needs of the market more closely will meet with general agreement. Unfortunately this is by no means the only Near Eastern market of which the same could be said.

COMMENTATOR.

BANQUE MISR (S.A.E.)

Capital L.E.1,000,000 (Fully Paid) - Reserve L.E.615,453

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 27.

It has been a dull and uneventful week in the Stock Markets, the threat of a home political crisis being added to the other influences that are at work to restrict business. The best feature has been the satisfactory absorption of new issues, from which a week or so ago the market was showing signs of indigestion, and there is now less disposition to feel any qualms about the forthcoming Reparations Bond issue, the final terms of which have not yet emerged from the discussions of the international experts at Basle.

Three features of the week are worthy of note. Home Rails touched the lowest levels recorded this year, as a result of further unfavourable figures of gross traffics (when, by the way, are the Railway authorities going to vouchsafe us net traffic figures, from which the investor can really judge what is going on!). Secondly, the passing by Cordoba Central of its interest payment on the second debenture stock sent a shiver through the Argentine rail market. Thirdly, the announcement of a Lancashire coal and steel amalgamation under the ægis of the Bank of England (although a significant event) failed to revive any public interest in the industrial share sections.

Oil Dividends.

The market in oil shares stood out as a bright spot against the general cheerlessness of the Stock Markets last week. This could be partially attributed to a more optimistic view of prospects of conservation in America, but several satisfactory reports and dividend announcements made in the last few days were largely responsible. Both Shell and Royal Dutch announced maintained dividends on greatly enlarged capitals; Burmah Oil disclosed profits of £3,437,472, or £1,957,846 more than the previous year's earnings, and the highest for eleven years, and raised its dividend from 20 per cent. to 30 per cent.; the profits of Anglo-Egyptian Oilfields at £848,245 advanced by £28,256; and Lobitos Oil is paying a dividend of 12½ per cent. compared with 10 per cent. last year and the year before. The Anglo-Persian, whose report will soon be available, should also make a satisfactory showing. While the market has justification for its more optimistic attitude, the oil industry is not at an end of its troubles—as the less satisfactory announcements of Trinidad Leaseholds and British Burmah indicate. Investors therefore should remember this fact, and also note that it is the large concerns embracing all branches of the industry which are likely to continue to do best.

The Rubber "Holiday."

With about three quarters of the May tapping holiday in the rubber plantations industry under European control having spent its course, the quotations for rubber still remain under 6⅞d. compared with an average price for 1929 of 10¼d. The full success or failure of the scheme cannot be ascertained at the moment, while it must be remembered that it was never intended to be more than a temporary measure. Although realising the only permanent cure to rest in the stimulation of consumption, which has yet to experience recovery after the set-back caused by the Wall Street collapse, the industry as a whole still appears to favour the try-out of these temporary expedients. The present "holiday," for example, aims at reducing stocks very considerably, but the success to be achieved in this direction is likely to be limited. Thus the American market, more pessimistic than the British, does not look for a reduction of more than 30,000 tons in stocks. Though the scheme has failed to arouse enthusiasm, the fact that an attempt has been made to secure the support of native producers marks a distinct step forward, since it is indicative of a realisation of the need of regarding the industry as a whole. While the tapping "holiday" has been in progress another scheme, framed on similar lines, has been suggested by Mr. H. J. Welch, the chairman of the Rubber Plantations Investment Trust. His remedy would lie in the suspension of tapping for seven consecutive specified days every month following a month in which the average London price was 9d. per lb. or lower. The scheme has much to recommend itself, but restriction in any form is only a palliative and not a panacea for the industry's ills.

Property Results.

Publication last Wednesday of the annual accounts of the City of London Real Property Company serves to remind us of the merits of shares in property companies as investments. In spite of an increase in local rates, and a natural decline in rentals with the depression in Stock Market and other City circles, net profits for the year to April 12 were only £21,100 less than those of the preceding year at £494,954. In accordance with the Board's usual conservative policy the doubling of the reserve allocation is recommended, which will raise the fund to £1,200,000, against an ordinary capital of £8,000,000. Nothing is required this year for taxation reserve, and after paying the same dividend on the ordinary shares as a year ago (5½ per cent.) the carry forward is increased by £9,017. The properties of a company such as this, situated in busy centres, are practically bound to enjoy steady appreciation, though subject naturally to set-backs in times of abnormally acute depression. The reserves are steady with a gradual upward tendency and, therefore, the payment of regular dividends can reasonably be expected. For this reason investments in such concerns are very suitable for those in search of sound non-spectacular

Travellers in Persia

THE CONVENIENCE OF THE CHEQUE

For those who know beforehand where they will be likely to require money, the system by which the Westminster Bank can arrange for a customer to cash his own cheques abroad is an undoubted attraction. Any local branch manager will be pleased to arrange with the Bank's agent in Ispahan, say, and Kazvin, and Teheran, to cash a customer's cheques within any pre-arranged limits. Nothing but a cheque-book need be carried, and the utmost ease and safety are enjoyed

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

outlets for their savings. City of London Real Property Ordinary shares return about £6 5s. per cent. The ordinary shares of another sound and well-known concern, London Country Freehold and Leasehold, yield £7 5s. per cent. It should be mentioned, however, that because of their merits such shares cannot always be readily bought.

FUR PRICES LOWER.

Th report of the London Fur Trade Association (Inc.) on the spring raw fur skin sales states that in view of the late incidence of Easter, and at the special request of the promoters of the International Fur Trade Exhibition which is to be opened in Leipzig at the end of May, the London spring fur auctions were arranged to take place on the present occasion partly before and partly after Easter. This arrangement has achieved its object of getting the sales over before the end of May, but in other respects has proved somewhat unsatisfactory. The first series, which included the sales of Australian and American staple furs, attracted a relatively small attendance of buyers, and the market proved to be somewhat weaker than had been expected. At the second series, when the finer furs were offered, there was a much better attendance, including a larger number of American representatives than has been the case for some time past. The results of these sales are in accord with the world-wide lowering of wholesale prices, from the effects of which the fur trade cannot hope to escape. At the same time the all-round decline in the values of good fresh furs, which are considerably cheaper than they were a year ago, stimulated demand and there was good competition for the majority of the offerings. Since furs are still regarded as highly desirable commodities by the public, it is felt that the outcome of these auctions should be to encourage trade in the most desirable manner by making it possible for furriers to offer the higher class furs at prices within the reach of a larger clientele.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Motor-driven Road Roller.—The Alexandria Municipality invites tenders for the supply and delivery of one 12 ton motor-driven road roller (three-wheeled type). June 17. (D.O.T.)

Pitch, etc.—The Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of pitch, tar, oakum, paints, oil, etc. June 5. (D.O.T.)

Photographic Materials.—The Equipment and Finance Department, Ministry of the Interior, Egypt, invites tenders for the supply and delivery of photographic chemicals, plates, paper and films, etc., for the year 1930-31. June 16. (D.O.T.)

Ventilating Sets.—The Main Drainage Department, Ministry of Public Works, invites tenders for the supply of three portable ventilating sets capable of extracting 130 cubic metres of free air per minute. June 21. (D.O.T.)

Pumping Stations.—The Mechanical and Electrical Department of the Egyptian Ministry of Public Works invites tenders for the supply and erection of 15 electric pumping stations complete with pumps, motors, switchgears, and pump houses, etc., at the Isolated Basins between Esna and Aswan. August 17. (D.O.T.)

Various Metals, etc.—The Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of various metals and materials, including plates, angles, tees, bars, rivets, required for shipbuilding purposes. (D.O.T.)

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

*†CIRCASSIA .. May 30 *†CASTALIA ... July 11
*CIRCASSIA .. Aug. 29

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE. New S. S. CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Drawing Materials, etc.—The Stores Department, Ministry of Education, Egypt, invites tenders for the supply of drawing materials, etc., for schools. June 24. (D.O.T.)

Water Tower.—The Ministry of the Interior invites tenders for the supply and erection of a water tower, steel tank with foundations at Deirout. July 17. (D.O.T.)

INDIA.

Oil Engine Alternator Set and Switchgear.—The Indian Stores Department, Simla, invites tenders for the supply, delivery and erection of an oil engine alternator set together with the necessary switch and protective gear and connecting cables. June 9. (D.O.T.)

Venturi Meter.—The Indian Stores Department invites tenders for the supply of one 36 in. Venturi meter with a 2 W water column type of recorder, or alternatively one 36 in. Venturi Orivent meter. June 9. (D.O.T.)

THE SUDAN.

Housing and Steel Shedding.—The Inspector-General, Egyptian Irrigation Department, Khartoum, Sudan, invites tenders for the construction of housing at Gordon's tree dockyard near Khartoum (July 15); and for the supply and erection of steel shedding at Gordon's tree dockyard, near Khartoum. July 15.

TURKEY.

Tamping Picks.—The Administration Générale des Chemins de fer et Ports de l'Etat invites tenders for the supply of 10,000 tamping picks for railway use. June 23. (D.O.T.)

Miscellaneous Iron Materials.—The Administration of the Turkish Railways and Ports invites tenders for the supply of miscellaneous round iron, bar iron, etc. (D.O.T.)

Copper Tubes.—The Direction Générale des Chemins de fer et des Ports d'Etat invites tenders for the supply of 5,550 kilogrammes of copper tubes. June 23. (D.O.T.)

YUGOSLAVIA.

H.M. Consul at Sarayevo reports that a local firm desires to receive tenders from British manufacturers for the supply of a motor watering-cart of a capacity of 2,500 litres. The cart should be provided with a pumping device to allow its reservoir to be filled not only from hydrants but also from wells and small streams. June 5. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, May 30). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Glasgow, June 5; Birkenhead, June 12); s.s. Matra for Calcutta (Birkenhead, June 11).

Bibby Line.—S.s. Leicestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 11).

British India Line.—S.s. Matiana for Port Sudan, Aden, and East African ports (London, June 6); s.s. Mantola for Colombo, Madras, and Calcutta (London, June 14); s.s. Trekieve for Bombay (London, June 21).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, June 7; Swansea June 10); s.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, June 11; Liverpool and Swansea, June 13).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 31); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 24).

P. and O. Line.—S.s. Padua for Calcutta (London, June 6); s.s. Malwa for Bombay (London, June 6); s.s. Bhutan for Calcutta (London, June 20); s.s. Rawalpindi for Bombay (London, June 20).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, June 4); s.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, June 11).

Ellerman and Papayanni Lines.—A steamer for Gibraltar*, Algiers*, Oran*, Syra*, Smyrna, and Constantinople (Liverpool, May 31); s.s. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, June 21; Swansea, June 30); s.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 24; Swansea, June 20); s.s. Manchurian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 5; Swansea*, July 5). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Lotus for Piræus, Istanbul, Izmir, Larnaca, and Beyrout (June 3).

Power Station Extensions at Leicester.

Very interesting particularly as showing the possibilities of the highest efficiency with a medium-sized installation, is the new plant, consisting essentially of a 25,000 k.w. turbo-generator and three high-pressure water tube boilers, that has been added to the Leicester Central Generating Station, officially opened a short time ago by Sir Andrew Duncan, Chairman of the Central Electricity Board. This is the first section of the extensions which will eventually be four water tube boilers, two 25,000 k.w. turbo-generator sets, and two house turbo-generator sets of 1,500 k.w. each, with the necessary switchgear and other equipment, while also all the buildings and foundations have been completed. The present equipment consists of three boilers and one 25,000 k.w. generator as stated, and for the complete scheme International Combustion Ltd., of London, are the main contractors, the new boiler house being 95 feet long, 130 feet wide, and 107 feet high from the base to the apex of the roof, while the engine room has been extended by 202 feet to make room for the new turbine.

The three new boilers have also been designed and constructed by International Combustion, Ltd., each with a duty of 150,000 lb. normal evaporation per hour, and 180,000 lb. overload, while "Lopulco" pulverised fuel firing is used throughout on the "bin and feeder" system, specially designed to operate with Leicestershire slack, which contains a high percentage of ash and moisture. The raw coal bunkers have a total capacity of 1,820 tons, and the coal is pulverised in 6 roller "Raymond" super-type mills, each capable of dealing with 15 tons of coal per hour, grinding down to an equivalent of 95 per cent. through a 100 mesh screen, the pulverised coal being stored in four bins each of 45 tons capacity, suspended over the firing floor.

Also each of the boilers is fired by three of the latest design "Lopulco" type "R" turbulent short-flame burners, having a total capacity of 9 tons of coal per hour, that is, 3 tons per burner, the latter also being supplied by three sets of duplex feeders fixed at the bottom of the pulverised fuel storage bins. The boilers operate at 365 lb. per square inch pressure with 760 degrees F. superheated steam temperature at the stop valve, and "M.L.S." superheaters have been installed, along with "Howden-Ljungstrom" air heaters on two of the boilers and "Usco" multiple plate air heater on the third boiler.

As regards the feed water, this is mainly provided by the condensate from the 25,000 k.w. turbo-generator, which is by the English Electric Co. Ltd., Rugby, with switchgear by Ferguson Pailin Ltd., of Manchester. Interesting also is the provision of distilling plant, capable of supplying 1,000 gallons of pure water per hour at 210 degrees F., using 1,750 lb. of live boiler steam in the process, the latter being all condensed and returned to the boilers. Further, each of the latter is provided with a complete battery of indicating and recording instruments of the "Bailey" automatic control type, including boiler feed meters of this make, and three new cooling towers have also been erected, which together are capable of cooling over 2,000,000 gallons of water per hour through 12 degrees F., the ordinary outlet temperature not exceeding 74 degrees F. under normal atmospheric conditions.

Transporting Stone.

With the great development of motor transport and the consequent need for improvement in road construction has come a big demand for stone, a demand that in many localities is only being filled with difficulty. Stone is being obtained from quarries which at one time merely supplied a purely local demand for walling and rough cut building work, and as a result of this widespread search for sources of road stone has come a further difficulty, that of economical cutting and transport of the road stone itself. In fact it may be said that the problems connected with the handling of heavy materials, not merely road stone, but the great blocks required by the modern architect, were, at no distant date, so numerous and so difficult of solution as not only to raise the cost of working unduly, but to make it almost, if not quite, impossible for industry to obtain the products in the large sizes required. Recently, however, and as a result of the demand for road stone and the severe pressure of foreign competition in connexion with cut stone of large size, quarry owners, managers and engineers generally have been turning their attention to the matter and doing what they can to devise improved methods of cutting and transport, particularly of large shaped blocks.

It appears that the transport difficulty has been accentuated in the past by the heavy working costs due to the fact that a good deal of the rough and finer cutting has had to be carried out at some distance from the quarry face, which has necessitated a good deal of moving about of the stone. In the majority of quarries a series of "incline" tramways were installed both for conveying the blocks and for removing the waste material. Any system of that kind, however, unless in the smallest of quarries,

Digitized by Google

involves a considerable amount of expense, and the operation and handling costs are high. For that, and certain other reasons, the aerial ropeway is coming into increased use, and in the north of England, particularly in connexion with the big Whinstone quarries near Gilsland and Greenhead, great quantities of stone are brought down to the loading docks from very distant quarries.

In some of the Westmorland slate quarries, where the slate is got out at various levels, there has been more than usual difficulty in getting the rough-cut stone down to the finishing shops, and in many of these quarries tramways are being taken out and aerial rope conveyors installed. As has been said, the usual practice was to run a series of tramways along inclined planes and through rock tunnels, but few engineers and quarry owners regard that system as ideal or adopted it except as something that could be used immediately whilst some better method was being devised. The writer has just received informa-, through the Quarry Managers' Association, that one of the largest slate quarries in Westmorland has now installed a ropeway about 2,600 feet long, and capable of carrying anything up to 3 tons of slate. The slate can be hauled at a maximum speed of 200 feet per minute, the average gradient in favour of the load being about one in fifteen and the steepest gradient being about one in eight.

It appears from a published account that among other engineering difficulties which had to be met was that connected with the type of carrier. A special design was worked out, which consisted of two separate carriers with hangers and a connecting rod. Each hanger has a bottom hook with a chain block attached and by that means it is possible to sling the larger blocks of stone or slate. In order that smaller blocks may be dealt with satisfactorily, special carrying trays, stoutly built and provided with chain slings, are in use. These can be filled as and when necessary, and then picked up by the chain blocks below the hangers. Two of these trays, one on each carrier, can be dealt with at a time or, alternatively two medium sized blocks or one big block can be carried.

At the loading end these carrier traps can be lowered on to platform trollies, so that they can be run along with the trollies on portable tramlines to the various slate chambers and filled, after which they can be run back to the loading station, still on the trollies, and lifted from them by the chain blocks into position on the hangers. The ropeway carrier, when loaded in this way, is run along the fixed loading rail to the point where it is automatically coupled up to a hauling rope and conveyed down to the saw mill and finishing shops.

As soon as the carrier reaches the delivery station it is automatically released from the hauling rope by the usual tripping arrangement, and runs along by gravity to the desired point on the fixed return rail. This stop is immediately above the platform trollies which are standing in readiness for the load and the tray can be lowered without delay on to these and run along tramlines either direct to the saw or, in the case of small blocks, to the trimming and dressing shops.

ELECTRIC LIGHT PLANTS IN GREECE.

There is a growing demand for small electric light plants in the provinces of Greek Macedonia and Thrace, particularly for plants with a capacity of 7 to 50 kilowatts and capable of generating a direct current of 220 volts (says the United States Consul at Salonika, Mr. Charles J. Pisar, in a recent report). Plants of a capacity smaller than 7 kilowatts are also in demand for lighting private houses, theatres, cafés, and farmhouses. The demand does not appear to be confined to any particular design of plant. Generators connected directly to the engine by solid coupling and mounted on platforms and those driven by belt from a detached engine are equally in demand. The method of mounting an engine and generator on one platform and connecting the two by a rigid coupling in order to produce a steady and unwavering current is probably preferred. On the other hand, plants consisting of generators that are driven by belt from a detached engine are found to be cheaper, and, consequently, are in favour with a certain class of purchasers. There is practically no demand for storage plants.

A large number of villages that have been established in Macedonia and Thrace since 1922 are without electric lighting, besides many older villages that are without such facilities. Dealers in Salonika estimate that in these provinces a demand for upward of 800 self-contained lighting plants with 12 to 18 kilowatt capacity could be created provided suitable facilities were offered. There is no domestic manufacture of complete electric light plants nor of engines or generators. The only thing that can be made locally is the switchboard, but the component parts, such as voltmetres, ameters, and switches, have to be imported from abroad.

The Egyptian Government has asked for a fresh credit of £E75,000 (making £E175,000) to be spent on the anti-locust campaign.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended April 30 amounted to £E8,033, making the total from April 1 £E25,322.

Mr. H. D. Street, the accountant of the Royal Exchange Assurance, will retire on pension on May 31. The Directors have appointed Mr. B. D. Cumming, the assistant accountant, to fill the vacancy.

Babcock and Wilcox, London, have received a contract from the Calcutta Electric Supply Corporation for four C.T.M.-type water-tube boilers, each capable of evaporating 50,000 lb. of water per hour, for installation at their Cossipore Station, Calcutta.

The total exports of grape juice from Greece during 1929 amounted to 7,740,854 kgs., valued at 33,460,509 drs. The bulk of this grape juice has been exported from the region of Calamata. The total quantity of wines exported during the same year was 131,480,222 kgs., valued at 563,485,877 drs.

The President of the Board of Trade has appointed Alderman E. B. Lewis, J.P., President of the National Chamber of Trade, as an additional member of the Committee recently set up under the chairmanship of Lord Chelmsford, to examine the present situation as regards the British Industries Fair, and to consider what means can be adopted to increase still further its utility to British trade.

Near East Markets

GREEK MARKET FOR TRACTORS.

Demonstrations of tractors, agricultural machinery, and implements are to be held once a year in various parts of Greece, either in spring or autumn, under the general direction of the Greek Ministry of Agriculture, for the purpose of determining the types of machinery most adaptable to local conditions, with a view to Government purchasing of such equipment (says the United States Consul at Athens, Mr. Edwin A. Plitt, in a recent report). The place, date, and programme of the demonstration are to be made known through the Government Gazette, the bulletin of the Ministry of Agriculture and the Agricultural Society, and the various Chambers of Commerce journals, which will be published about two months before the date of demonstration.

No definite information is available regarding the quantity of tractors desired. It is estimated that farm tractors of all sizes now in Greece number less than 300, and are being used principally for ploughing, threshing, sowing, and cultivating. The present agricultural development of Greece tends towards the cultivation of small units, and the settlement of Asia Minor refugees on farms of less than 10 acres is an index of the Governments's plans in this respect. The principal products of the smaller farms are grain, tobacco, currants, raisins, and olives.

According to present indications, small tractors of 4 and 6 to 12 horsepower will be wanted, and particular emphasis is placed on the non-suitability, for the purpose considered, of any but small-sized units. Light wheel tractors have proved most popular in the past. A consideration of importance affecting the introduction of farm tractors is the price of fuel, which up to the present has been as high as 2s. per gallon, thus making it difficult to operate machines of this nature on an economical basis. Suggestions have been made to the Greek Government to give gasoline for tractor operations a distinctive colour, and to waive the import duty on such fuel for use by tractors

Farm machinery commonly used with tractors in Greece consists of ploughs, harrows, cultivators, harvestors, and reapers. Tractors are used to some extent to furnish power for belt transmission. These farm machines will in all probability be purchased by the Greek Government in the beginning for the purpose of using them for demonstration at the proposed experimental stations, and ultimately to supply them to the various farm committees or agricultural co-operative groups from which the individual farmers can obtain them as required. Funds for such purchases can be made available by the new Bank of Agriculture, which is empowered to make advances to such groups for the acquisition of modern farm equipment.

There is no local manufacture of tractors; the country is dependent upon imports which come from the United States, Germany, Sweden, Czechoslovakia, and Hungary. In supplying tractor equipment to Greece, special consideration should be given to the provision of adequate repair facilities and easily obtainable parts, the lack of which in the past has been an obstacle in the more general use of this kind of machinery. It is likely that the Government may establish service stations to provide such facilities.

An extensive agricultural development is expected to take place in Macedonia and Thrace, and farming is also to be intensified in Thessaly. The reclamation projects of the Struma and Vardar River Basins will add about 720,000 acres of arable land, which is to be settled and for which adequate machinery will be required. Up to

EXPLOSIVES

TIME and Science have wrought many changes in the control of fire, ever a good servant but a bad master.

Modern commercial explosives are a symbol of the harnessing of fire. With their aid feats of construction, as well as the winning of the wealth beneath the surface of the earth, are rendered possible in the interests of the rapid growth of civilisation.

Enquiries concerning modern commercial explosives should be made to—

IMPERIAL CHEMICAL INDUSTRIES LIMITED

A booklet N.E.I. 10 entitled "The Products of Imperial Chemical Industries Limited," will be sent, post free, on application to the Publicity Department

Digitized by Google

the present, crude methods of cultivation have been in general use. Power has been supplied principally by draft animals, including oxen, buffalos, and sometimes horses and mules. Hand labour has been adequate for the land cultivated, but will prove insufficient as new areas are developed.

NEAR EAST MARKET REPORTS.

Barclays Bank (Dominion, Colonial, and Overseas) have received the following cabled reports:—

Egypt.

Alexandria, May 19.

There has been no improvement in general trade conditions during the past month, mainly owing to the lack of purchasing power in the interior. Prices of cereals, which affect the position of the fellaheen, have remained at very low levels. The stock and share market has been quiet, with a slightly falling tendency.

In the cotton market there have been very few features of interest, and business in futures has continued to be of a professional character with a noticeable absence of commercial interest. The Government have declared their intention of supporting July contracts at 28 dollars, but this decision has not had much effect on May tenders, which to date have totalled about 380,000 kantars. Little damage appears to have been done by locusts to date, but the danger is not yet past, as the young locusts hatched out from eggs laid during the last few weeks may cause harm. The spot market has continued dull, the demand being of a hand-to-mouth variety. Sakel premiums continue unchanged, with Uppers slightly easier and very little request for other varieties. Arrivals from September 1 to date are 8,174,416 kantars, compared with 7,804,756 kantars for the corresponding period last season, while exports are 5,332,554 kantars, against 6,231,587 kantars. Stocks are 4,006,085 kantars, against 2,816,308 kantars.

The cotton-seed market has ruled quiet during the month, the most noticeable feature being the widening of the differences between near and far month futures, owing to the lack of shipping available and to the consequent dullness of the spot demand. The market for cakes and oils has been fairly good and local consumption has been adequate. Cotton-seed arrivals from September 1 to date are 3,855,290 ardebs, compared with 3,752,034 ardebs for the corresponding period last season. Exports are 2,257,508 ardebs, against 2,058,788 ardebs. Stocks are 1,060,042 ardebs, against 1,575,405 ardebs. Local consumption has amounted to 1,027,270 ardebs, compared with 994,804 ardebs.

The market for cotton goods has been weak generally, with large supplies on hand, and business has been limited. The stock of Manchester goods is decreasing, and the market is quiet with prices unchanged.

Flour.—Owing to the native holidays during the past week, the demand for Australian flour has been satisfactory and prices in the market have ruled steady.

Rice.—A good demand for imported rice for local consumption has been apparent, and Egyptian rice has also been active at advancing prices.

Onions.—The market has improved during the past month, but in the last few days arrivals have been so heavy that prices have noticeably declined. It is believed that there are still considerable quantities of onions in Upper Egypt, a great part of which will probably not be sent to Alexandria.

Cereals.—The market has been firm, with prices unchanged and stocks decreasing.

The Sudan.

Khartoum, May 16.

The position shows little change compared with a month ago. Conditions continue dull, and the feeling amongst merchants is not hopeful. The slackest season of the year is approaching. There has been a considerable fall in the price of gum, owing to the recent large arrivals, and present quotations c.i.f. United Kingdom are 66s. per cwt. for cleaned, 64s. per cwt. for natural. The outlook for dura is better.

Palestine.

Jerusalem, May 14.

The tourist season has now terminated and the results are disappointing, only a slight movement being recorded during the Easter festivals. The orange season is now at an end, the total exports being 2,643,620 cases, representing an increase of approximately 1,000,000 cases compared with the previous year. The expansion was chiefly due to last year's short crop and to the new fruit-bearing plantations this season. So far, weather conditions have been favourable for the growing crop.

A Bombay message states that it is understood that negotiations are proceeding between the Indian Radio Company and the Indian Government with a view to establishing a wireless telephony service between India and the United Kingdom. While it is understood that the service from India to the United Kingdom will be conducted by the British Post Office, through Rugby, the reciprocal service from India, if the present negotiations are successful, would be operated by the Indian Radio Company. The necessary arrangements, including the installation of a special transmitter, are not likely to occupy more than three months.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended May 17:—

Grain.—Last week's stagnation continued throughout this week and was mainly due to merchants' inability to secure the necessary grain rather than to unfavourable markets. As a matter of fact the last days of the week closed with a steady inquiry for maize at improved prices and with a pronounced upward tendency, but the scarcity of ready grain precluded business. It is expected, however that should the improvement be maintained peasants will sell at least part of their grain stocks which should arrive at shipping centres promptly. What little maize could be scraped together was sold to the Adriatic, which market paid better prices than the Continent. A few thousand tons of maize and barley have likewise been sold to the U.K., but for June shipment. The position on the grain market was reflected on the freight market, and in spite of the fact that very low rates would have been accepted for such steamers whose laydays have expired already or are expiring, little or no progress could be made with their loading. Two steamers of about 5,000 tons each were fixed for U.K. ports on the basis of 16s. May loading, another for the Continent basis 14s. Antwerp/Hamburg range, and a 7,000 tonner was chartered at 14s. 1½d. basis with option of U.K. June loading. There is no improvement in the situation at Constantza.

Timber.—There are some stray parcels in the market for Spain and North Africa, but owing to shippers' low ideas of freight no engagements have been concluded. Although about 15 small vessels are loading for different Mediterranean points in execution of old contracts, no fresh transactions have taken place lately and in consequence the tendency on our market is weak. Rates of freight remain unchanged.

Weather and Crops.—The weather has been very cool, cloudy and showery, especially in the north and west, though even in this neighbourhood, which is generally drier, no more moisture is now required for the straw crops, from which, on the present position exceptionally good yields are expected. Maize is having a very good start.

Sulina.—Bar depth 24 feet. Owing to the quantity of silt brought down by the flooded river, a deposit formed near the lower end of the outer channel, reducing the depth from 24 feet to 23 feet 6 inches, over a length of about 500 feet, but this was dredged through in a short time and the previous depth of 24 feet re-established. Work on the prolongation of the north pier was renewed at the beginning of the month and the sinking of foundation mattresses continues. River depth 24 feet.

Constantza.—This week about 4,000 tons of grain arrived from the interior and clearances amounted to a few hundred tons for Amsterdam and London. At the time of writing two steamers are loading at the elevators, one of 5,000 tons for Dublin and the other of 3,000 tons for Antwerp Rotterdam, whilst several other vessels are waiting for cargo. Nine vessels loaded 42,000 tons of petroleum products and two took oil fuel for bunkers.

Bulgarian Report.

Bourgas, May 10.—A slight improvement was noticeable on our market and about 1,500 tons for Rotterdam and Hamburg have been closed at 9s. 3d. to 9s. 6d. for immediate shipment, whilst a similar quantity at equal rates was booked for June loading. The weather was generally overcast and rain fell in some parts of the country. All reports state that the crops are in excellent condition and an abundant harvest may be expected.

A commercial treaty between Germany and Turkey has been concluded at Angora.

The Roumanian Government has ratified the Young Plan and the Paris Agreement.

The traffic receipts of the South Indian Railway Company for the week ended April 26 amounted to Rs.12,04,078, making the total from April 1 Rs.47,57,089.

Company Meeting.

ANGLO-EGYPTIAN OILFIELDS.

Record Production.

Sir Reginald MacLeod's Speech.

The nineteenth ordinary general meeting of the Anglo-Egyptian Oilfields, Ltd., was held on May 23 at Winchester House, Old Broad Street, London, E.C. Sir Reginald MacLeod, K.C.B. (the Chairman), presided.

The Secretary (Mr. W. A. Turner, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman said:—I presume you will take the report and accounts as read in the usual way. From this report you will already have learned the extremely satisfactory results which have enabled your Directors to recommend the maintenance of a dividend on the "B" shares at the rate of 22½ per cent. for the year 1929.

Turning to the profit and loss account, you will notice on the debit side that in the past year it has been possible to make a reduction in the working expenses both on the fields and in the refinery as compared with those incurred in the previous year, while on the other hand depreciation has increased with the increase of the company's activities which necessitated additional equipment both on the fields and in the refinery. On the credit side you will notice that the proceeds from the sale of oil and the value of stocks show an increase of about £24,000 over last year. This is partly accounted for by the larger production, but to a greater extent is due to the development of the company's refining facilities enabling the manufacture of a larger variety of products which have been satisfactorily marketed for us by the Shell Company of Egypt, Ltd., and the Asiatic Petroleum Company, Ltd. The fact that the proceeds are higher than in 1928 is extremely gratifying considering that world prices were generally lower last year than in the preceding year.

The balance-sheet discloses that our liquid cash resources amounted to over £616,000 at the close of the year, notwithstanding that the net additions to capital during the year total over £192,000. This substantial increase in capital expenditure is accounted for to a large extent by the erection of the cracking plant, from which we have already started to reap a very valuable revenue, and to a less extent by the provision of plant for the manufacture of drums for marketing lubricating oil and liquid asphalt. Below the item "Investment in the Somaliland Petroleum Company, Ltd.," will be noticed a smaller item for advances to the same company, required for the provision of funds for our geological exploration party now working in Somaliland.

Turning to the liability side of the balance-sheet, it will be observed that the exploration reserve account remains at practically the same figure as last year, when it was seriously depleted by writing off the loss incurred by the Red Sea Petroleum Company, Ltd., on the Farsan Islands. It will be seen from the appropriation account, however, that it is now proposed to allocate the sum of £69,438 10s. 7d. to the exploration reserve account to bring it up again to a total of £100,000. I feel sure you will agree with me upon the wisdom of maintaining a substantial reserve in order to continue our search for new fields.

I am unable at the moment to give you any information as to the results of the geological survey in Somaliland, which is of so much importance to the company. The work of our party there is now practically complete, and the geologists will be returning to Europe at an early date, when the whole position will be studied with up-to-date information. A decision may then be arrived at as to whether the prospects justify the expenditure involved in the sinking of a trial boring.

The Hurghada Field.

On the Hurghada Field, you will have noticed from the report, the production was about 3,000 tons in excess of that obtained in 1928, amounting to a total of 267,244 tons, a record in the history of the company. This figure represents the net production after the extraction of water in the dehydrating plant, and cannot be compared with the yearly figures reported up to and including the year 1920. The bulk of the production obtained for the year has come from the northern part of the field, where we still have territory for a considerable number of new well locations, and drilling is being carried out according to the latest scientific methods of raising to the surface the largest quantity of oil with the least possible amount of water.

As mentioned in the report, a deeper sand was discovered in the eastern extension of the field last November yielding water-free oil, and we now have two wells flowing from this level with a steady rate of production. I am glad to be able to inform you that the oil so far obtained from this level is considerably lighter than the oil produced in other parts of the Hurghada Field, and contains a higher percentage of benzine and kerosene.

The dehydrating plant was increased in capacity during the year by the addition of two new treaters and at the present moment other improvements to the plant are being carried out. During the year the pumps at the Hurghada tanker loading installation were increased in capacity enabling the quicker dispatch of tankers carrying crude oil to Suez with a corresponding saving in freight. As you will have seen from the report, the gas compression plant continued operating satisfactorily, and a stabiliser was installed in the course of the year which has made possible a larger recovery of gasoline by reducing the losses which had hitherto taken place in storing and handling the casing-head gasoline after it had been blended with crude oil.

By far the largest construction project carried out during the year was the installation of the cracking plant at the Suez Refinery. Materials for this plant were received rather more slowly than was originally anticipated. I am pleased to be able to say, however, that the plant is now operating and the results have entirely come up to our expectations. I think a word in explanation of the benefit of this plant to the company would not be amiss. As you may know, part of the fuel obtained from the Hurghada crude is run through the asphalt plant for the manufacture of asphalt, which is sold in Egypt and other adjacent markets. In the manufacture of this asphalt a distillate is obtained as a by-product which has very little value, since it can only be mixed with ordinary fuel oil in very small proportions. It is this distillate that is cracked to yield benzine, the residue being used as fuel in the refinery.

Probably the most noteworthy feature of this year's operating of the refinery is the economy effected by the addition of Trumble No. 6, which has distilled the whole intake of Egyptian and imported crude and has shown a saving during the year of over £23,000 on the cost of distilling in the older plants through which the crude has previously been run.

The new petroleum basin constructed at Suez by the Egyptian Government was declared open on May 1, and at the present moment our loading installation is in course of being transferred from Port Tewfik. The new basin being situated adjacent to our refinery will mean that an economy in the cost of pumping to and from vessels will be possible, Port Tewfik being about 5 miles from our refinery A further consideration is that day and night loading and unloading of tankers will be allowed in the new petroleum basin, whereas only pumping by day has been allowed at Port Tewfik. This will mean that it will be possible to make fuller use of the loading facilities and at the same time minimize demurrage to tankers.

The Outlook.

I know you would like from me some expression as to the prospects for the future, and I think I can safely say that I see no reason why the present prosperity of the company should not continue. While the Hurghada Field of course must have its limits, at the same time we have not yet seen any indication of exhaustion; moreover, the new developments in the eastern extension of the field give promise of further potential production.

You will be interested, I am sure, to hear that Mr. Heath Eves, one of our Directors, paid a visit a few months ago to the Hurghada Field and the Suez Refinery, and I am very happy to be able to inform you that he returned with the highest opinion of the efficiency of our managers and staff and of the operations in general of our company. I feel sure that you will wish to join with me in complimenting all those who have served the company throughout such a successful year.

During the past year Mr. William Fraser, C.B.E., who is well known to you as a director of the Anglo-Persian Oil Company, and Mr. Frederick Godber, who will be equally well known to you as a director of the Shell Group, were appointed to the Board. You will agree with me that we are indeed fortunate in securing the co-operation on the Board of two gentlemen of such wide experience in the oil industry.

He concluded by moving the adoption of the report and accounts. The motion was seconded by Mr. Alexander Mackay, and was carried unanimously.

The Chairman then moved: "That a dividend be paid for the year 1929, in accordance with the Articles of Association, equal to 22½ per cent. upon the 'B' shares, less tax."

Mr. W. Fraser, C.B.E., seconded the motion, which was unanimously approved.

Mr. Vere Herbert Smith proposed the re-appointment of Messrs. Turquand, Youngs and Co. as auditors.

Mr. S. E. Price seconded the motion, which was carried unanimously.

Mr. V. Herbert Smith said that the shareholders had listened to a most interesting, and he considered encouraging, speech from the Chairman. When they considered the difficult conditions prevailing during the past year, not only in London but in other parts of the world, and the low prices of oil, he thought they must feel very strongly that their company was not only a very carefully, but also a very ably-managed concern. (Hear, hear.) They all felt extremely gratified with the results which had been placed before them and with the dividend they were receiving. (Hear, hear.) He would like to propose a cordial vote of thanks to the Chairman for his conduct in the chair, and to the Directors, the secretary, and staff in London and in the East.

Mr. Webster seconded the motion, which was unanimously accorded, and after a brief acknowledgment by the Chairman the proceedings terminated.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 21:—

Egyptian Futures.

Sakel Contract.—A very quiet state of affairs has prevailed in this market during the majority of sessions since our last report, and with trade support again being on a negligible scale values have tended gradually to lose ground. Even a sharp advance in the American markets towards the end of last week failed to arouse any response in our contract, and it now appears that only a distinct turn round in the trade situation or the development of unfavourable new crop advices will work sentiment out of the prevailing pessimistic groove. Unfortunately, trade reports continue to be very poor, not only in this country, but in all other spinning centres; curtailed production seems to be the vogue everywhere and consequently stocks are weighing heavily on the contract markets. In Alexandria, the visible supply totals about 1,600,000 kantars, a substantial increase on the figures at the same time last season. The 1929 exports from now to the end of August just exceeded 575,000 kantars, a figure that will probably compare very favourably with the prospective shipments for the same period this season, so that statistically those working on the "short" side appear to have a solid basis for their arguments. In our opinion, however, one important point must be taken into consideration, and that is, with the Egyptian Government now holding the greater part of the available tenderable cotton, the futures markets are not covered by the usual supply of floating contracts. This being the case, values during the next few months will be very susceptible should anything develop either from a trade, or crop, standpoint, to induce a covering movement. Whilst conceding that there is nothing "bullish" in the immediate outlook, we would prefer to risk conservative new crop commitments on the "long" side, rather than join the majority who latterly have been putting out sales influenced mainly by the depressing conditions surrounding most commodity markets.

Upper Contract.—Very few features of interest have cropped up in this market during the past week, and trading throughout most of the sessions has been of an extremely light character. With spot business on a restricted scale, only isolated purchases of old crop positions have been in evidence, but, even so, differences have been well maintained, as local stocks of tenderable cotton are much reduced. New crop news indicates that a satisfactory start has been made, and the present tendency is to anticipate a record yield. There are no factors in sight at the moment to induce the adoption of any definite news on the outlook, and probably for the immediate future fluctuations will be governed mainly by the action of the American markets.

Egyptian Spot.

There has been no improvement in the demand for Egyptian varieties during the past week. Conditions in Lancashire remain in a most unsatisfactory state, and the demand from the Continent has also fallen off. Only one brief moment of activity has been witnessed and that was one day when Sudan Sakel came in for a brisk inquiry for export.

Sakels.—A very moderate inquiry has been witnessed, and quotations generally are easier. Most interest has been shown in cotton on the top side of "Good," but purchasers have been operating on a "hand-to-mouth" scale only.

Uppers.—A fair inquiry has been seen for cotton at from 50 to 75 on. Other qualities have suffered from neglect.

Pilion.—Very little interest has been displayed in this cotton, and hardly enough business has transpired to test prices.

Nahda.—There still would appear to be an undercurrent of interest in this cotton. Many spinners have been busy recently testing the market and experimenting with their "mixings," but owing to the general lack of yarn offtake very little actual result has been achieved. Egypt continues to press this cotton for sale.

Maarad and White Cotton.—A little business has been transacted, but these cottons have also suffered from the general lack of demand.

Tokar Sakel.—The inquiry has remained a very small one.

Sudan Sakel.—This cotton has furnished the only bright spot in the week. On one occasion a good demand sprang up for export and a line of approximately 3,000 bales changed hands.

C.i.f. business has been merely nominal in extent. Forwardings were returned as 5,781 bales Egyptian and 3,432 bales of Sudan. Spot sales have been estimated at 1,000 bales Egyptian and 2,960 bales Sudan Sakel. Quotations of Sakel show declines of from 20 to 30 points. Those of Upper are 11 to 16 points lower, and Pilion 10 points lower. F.G.F. Sakel to-day, 13.85d. F.G.F. Upper to-day, 10.16d. F.G.F. Pilion to-day, 10.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended May 15:—

Since our last report the futures market has been fairly quiet with an undecided tendency. The week's summary of price movements is as follows:—Sakellaridis: May, 28.00 dollars, unchanged; July, 28.13 dollars, 0.41 dollars up; November N.C., 25.32 dollars, 0.03 dollars down; January N.C., 25.61 dollars, 0.08 dollars down; March N.C., 25.09 dollars. Ashmouni: June, 19.80 dollars, 0.01 dollars down; August, 18.25 dollars, 0.13 dollars down; October N.C., 17.57 dollars, 0.13 dollars up; December N.C., 17.02 dollars, 0.14 dollars up; February N.C., 18.30 dollars, 0.15 dollars up; April N.C., 18.62 dollars.

Sakel.—The Government, after much hesitation, has finally decided to extend its intervention to July and has fixed the price of its purchases of this option at 28 dollars. This news, together with the totally unexpected advance in New York last Monday, dissipated the depression hanging over our market, and on some short covering and speculative buying, November picked up to about 25.80 dollars and July to above 28½ dollars. The recovery in American, however, was of short duration and as trade interest continues to be more or less completely apathetic, our market quickly lost the ground which had been regained, and closes, with the exception of July, at prices even slightly lower than those of last Thursday. Against the second May tender, dockets for 90,500 kantars

were issued, bringing the total for the first two tenders of May up to 379,000 kantars, and the total of the Sakel tenders received by the Government since November, 1929, up to 1,140,750 kantars.

As arrivals from up-country have not entirely ceased and as there is still on the market a certain quantity of tenderable cotton which holders will certainly not want to carry over into the new season with the appreciable discount ruling between prices of old and new crop deliveries, this total of 1,140,750 kantars will very likely be largely increased before the end of the present season. Reports from consuming centres do not indicate any change in general conditions; little business is passing, with, in general, poor margins for the manufacturer. In view of the present accumulation of stocks and the favourable outlook for the crops just planted, both here and in America, it is only natural to expect rather heavy markets in the immediate future.

The Sakel Uppers new crop straddle (November/October) this week stands at 775 points, against 791 points last week and 1,272 points at this time last year.

Uppers.—The market for Uppers has been slightly firmer than Sakel, and the straddle difference between the two varieties has narrowed slightly this week. The relative firmness of Uppers is due to some straddling by purchases of Ashmouni against sales of Sakel, and to a few trade purchases in cover of business concluded with spinners for new crop shipment. The total of Uppers received by the Government during the present season against December, February, and April contracts is 810,500 kantars, and it is expected that this figure will be appreciably increased by tenders against the June delivery. The difference between October Ashmouni and October New York has declined this week to about 250 points, and in spite of the fact that this figure should be considered reasonable, a further decline in the difference is expected in case the projected American import tax on long staple cotton definitely becomes law. According to latest reports, the final decision on the question will be taken before the end of this month.

The Ashmouni American new crop straddle (October/October) this week stands at 258 points, against 292 points last week and 336 points at this time last year.

The week's receipts amount to 78,888 kantars, against exports 32,262; the stock in Alexandria stands at 4,006,085 kantars.

Spot.—The market was closed on Friday and Saturday last for the native festival of Bairam. The total turnover this week amounts to about 4,500 bales, of which we estimate 1,000 bales Sakellaridis, 3,000 bales Ashmouni and Zagora, 250 bales Pilion, and 250 bales other varieties.

Sakellaridis.—The demand for low grades mentioned in our last report continues. A small business has also been done in the top grades, but the medium grades are more or less neglected. Spot differences remain unchanged.

Ashmouni and Zagora.—Rather more interest has been shown in these varieties, the low grades particularly being in favour. Some business was done in Fully Good Fair to Good and above, and, owing to the approaching June tender, spot differences have hardened slightly.

Pilion.—Only a very small business has been done.

Other Varieties.—There has been some demand for the better grades of Nahda.

Crop, 1930.—Weather conditions have been somewhat changeable, but this has not affected the development of the young plants. The crop has undoubtedly had a satisfactory start, the acreage planted is larger than last year, and, given about normal conditions during the summer months, a production appreciably larger than that of last year may be expected.

Notes of the Week.

A Balkan Conference.

The proposal frequently made in these pages that, as a preliminary step towards the goal of Balkan unity, a conference of representative citizens of the various countries should be convened to explore the ground for co-operation, is likely to be acted upon this year. It was obvious from the first that in the existing state of public feeling in the Peninsula the initiative would have to come from outside, and the difficulty has been to find a suitable agent, whose disinterestedness and impartiality would be above challenge and whose influence would be sufficient to command the attention of those concerned. A solution of the problem would seem to have been found in the action of the International Bureau for Peace at Geneva. Last October a "Universal Congress of Peace" was held at Athens under the auspices of this body, and, most appropriately, some attention was devoted to the question of peace in the Balkans, and a sub-committee was formed composed of representatives of the Balkan States to study suitable ways and means for bringing about a *rapprochement* among these countries. As a result of its recommendations, the International Bureau has addressed a message to the Foreign Ministers of Albania, Bulgaria, Greece, Roumania, Turkey, and Yugoslavia, setting out the proposal and inviting the help of each Government in the formation of a local Committee that will make itself responsible for the adequate participation of the country in the Conference, which, it is proposed, should be opened in Athens on October 5 next.

Scope of the Conference.

It is suggested that the Conference should comprise thirty delegates from each country who would be representative of the public life of the nation, drawn, that is to say, from the spheres of politics, industry, commerce, agriculture and labour, from the Universities and other educational establishments, from the Press and from recognised organisations working for the diffusion of ideas of right, justice and international solidarity. The Conference is to be unofficial in so far as it will not in any way bind the Governments of the various countries; but it is hoped that the Governments will be represented at it by "Observers," with a view to keeping themselves informed of its labours, aspirations, suggestions and intentions. The task of the Conference will be to examine all questions that have a special interest for the Balkan States and the solution of which is calculated to bring them closer together; to study ways and means by which in each of the countries concerned different elements can be led to work for indispensable and profitable understandings and to promote a clearer comprehension of the needs of the day and of the possibilities of the morrow. Athens is chosen as the first seat of the Conference both by reason of its historical association and in virtue of the fact that the idea of holding the Conference originated at the Congress held there last year. It is proposed, however, that the Conference should meet in turn at the capitals of the various countries. The response to this invitation has not yet been made known, but there is no reason to suppose that any of the States concerned will wish to dissociate itself from the movement, unless Roumania should adopt the view, which is known to be held by individual members of the present Government, that she has no call to identify herself with the Balkans and that her destinies can be, more profitably to herself, linked up with those of Central Europe. With greater justification Turkey might claim that, as her centre of gravity is firmly fixed in Asia, she has no need to take part in a Balkan Federation; but it will be surprising if the Ankara Government should decide that it will not be to its advantage for Turkey to be represented at the Conference.

Bulgaria and the Macedonians.

The new Bulgarian Government, which contains Dr. Tsankoff, the champion of the policy of a firm hand with all potential disturbers of the peace, has lost no time in announcing its resolve to do all that it can to check the activity of the Macedonian Revolutionary Organization. In a recent statement to the Foreign Affairs Commission M. Bouroff, Minister for Foreign Affairs, stated that the Government was firmly resolved to take account of the friendly advice given by the Great Powers with a view to restoring normal relations with Yugoslavia. It requires some moral courage on the part of a Balkan Government to acknowledge in public that it has been the recipient of such a measure of pressure from outside; but Bulgaria has rarely failed to be quite frank in regard to its peculiar position in Balkan affairs. A few weeks ago the Yugoslav Foreign Minister indicated that his Government was still not satisfied that the Bulgarian authorities had done all that they could to curb the activities of *komitajis* or the Macedonian Revolutionary

Digitized by Google

Organisation. Towards the end of March a number of arrests had been made in Bulgaria, but it was not to be expected that Mihailoff and his more determined followers would allow themselves to be cowed by such vicarious means. That they have not adopted immediate reprisals is possibly a tribute to the efficacy of the measures taken by the Bulgarian Government to circumscribe their range of action. There can be little doubt that the Organisation must realise by now that M. Liaptcheff's Government is committed to its ultimate suppression, and the moment is, therefore, opportune for a clear announcement by the Yugoslav Government that it is prepared to contribute its share to the elimination of the Macedonian question, by definite steps towards the removal of the grievances of those of its own nationals who still claim, as a minority, that they are denied certain rights promised to minorities under the Peace Treates.

Immigration into Palestine.

There appears to be a growing number of men who visualise the Zionism of the future as something absolutely non-political, something that is concerned with the quiet and progressive work of Jewish colonists, with the cult of the Hebrew Language, with the Hebrew Universities and similar institutions. This imagined Zionism would, in short, be a movement shorn of all difficulties and problems, something that manifestly benefited both the local Arabs of Palestine and the world. Such observers seem to regard with equanimity the possibility that the forthcoming Report of Sir John Hope Simpson may conceivably lower the hopes of all Zionists but those belonging to the "spiritual" or "cultural" category. But how far this way of thinking is removed from that of the ordinary Zionist may be seen from the plain-spoken words which Dr. Weizmann uses in the covering letter to the annual memorandum submitted by the Jewish Agency to the League of Nations. The President of the Agency, whose recent talk of resignation we hope will not be persisted in, writes: "There can be no National Home without men and land. Restriction of our immigration on political grounds, or legislation which would deprive us of the possibility of acquiring the necessary land for our settlements, would mean for us a virtual cancelling of the Mandate. While we are glad to note the admission in the Inquiry Report that our work in Palestine, by its very nature, benefits the Arab population, and while it is our intention that it should do so, our National Home is an aim in itself, and is acknowledged as such by the Mandate." Such pregnant words demand the closest study.

INDIAN NOTES

The Whitley Commission.

The proceedings of the Royal Commission on Labour in India now sitting in London under the Chairmanship of Mr. J. M. Whitley, the late Speaker, has not attracted much attention so far in this country. This may be due to the fact that the evidence which is being taken, important though it may be for the purposes of the inquiry, is to a great extent of an official or technical character. But the need of a better relationship between Indian employers and their labour force is a crying one and the tribute paid by Mr. Benn in the House of Commons last week to the work of Mr. Whitley, and his fellow Commissioners, both Indian and British, is as timely as it is well deserved. The Commission was cordially received in India in spite of the avowed intention of the Congress leaders to include its activities in the general boycott of things British. With one or two exceptions all the various interests concerned were anxious to co-operate and the Secretary of State was perfectly correct in saying that, "the very presence and journeying of the Commission throughout India has done much to improve the relations between employers and employed and generally to bring people together in a common endeavour to promote the betterment of labour conditions in the country." That the standard of living of the Indian labourer is gradually improving is beyond question, but that the economic disabilities under which he labours owing to social and religious customs must for some time to come form a fundamental obstacle to rapid progress is no less evident. Fortunately, as we have previously observed, the Whitley Commission is admirably qualified alike on account of its representative nature and the ability and experience of its members, to grapple with its responsible and onerous task, which the growth of Commission has made even more pressing and important.

The New Ordinances.

The Secretary of State's assurance in the debate on the India Office vote last week, that the Government would not permit the Congress to carry out the new Allahabad programme of non-payment of taxes, boycott of public servants and intensive picketting of cloth and liquor shops has been implemented. The Viceroy has acted promptly and with decision, his action taking the form of the issue of two Ordinances, one of which deals with the anomaly whereby at present a person who withholds land revenue is penalised while the person who incites him escapes. In future the instigation not to pay, or to defer payment of land revenue or any other tax will be a cognisable non-bailable offence, punishment with six months' imprisonment with or without a fine. The second Ordinance is designed to protect the public in general against molestation and intimidation, and check the boycott of public servants. The Ordinance, Lord Irwin explains in a covering note, is directed only against certain illegitimate activities which are being organised by the leaders of the civil disobedience movement. It will not be used to impede or interfere with the legitimate promotion of an economic movement which has for its object the furtherance of indigenous enterprise, nor will the powers be exercised in regard to any genuine labour dispute unconnected with political objects and in any case the Ordinance will be withdrawn as soon as the aforementioned activities cease. In taking measures to check at the outset a movement intended to disorganise the administration and which, if successful, must, as Lord Reading emphasised in the House of Lords last week, damage the whole economic structure of society, Lord Irwin appeals for, and will have, the support of all who desire to resist a plain threat to orderly progress and stable government.

POLICY IN PALESTINE.

The obvious comment upon the "Statement with regard to British Policy in Palestine" (Cmd. 3582), which was issued last week, is that it is no statement, that little real indication of future British policy is contained in it. That is true; but at least it can be said that a statement is promised. In this studiously and necessarily vague document, the British Government has unequivocally pledged itself, after receipt of the Report by Sir John Hope Simpson on questions of immigration, land, and development, to issue a further and more explicit statement of policy. That is unquestionably an advance; it is obvious that the Government has recognised that a turning-point in the history of Palestine has been reached, and, that being so, it inevitably is exercising the utmost caution in putting up fresh sign-posts and in devising fresh measures for the regulation of traffic. But first let us see what this White Paper does contain. It recalls, in timely fashion, seeing that the Permanent Mandates Commission is discussing Palestine at Geneva this week, how the Mandates Commission in its "Observations" of 1924, recognised the "conflict of interests" which is involved in the establishment of a Jewish National Home in Palestine and the administration of the country "in conformity with the interests of the population as a whole." It does not deny the difficulties, existing and implied, but professes a determination to find a remedy. Next, the British Government generally accepts the findings of the Shaw Commission of Inquiry upon (1) Nature of the August outbreak; (2) Zionist complaints against the Grand Mufti; (3) Zionist complaints against the Palestine Arab Executive; (4) Zionist complaints against the Government; and (5) Minor Arab grievances. The fact that the Government does here generally accept these much-discussed findings will surely cause heartburnings. It might be wiser, however, to realise that the Mandatory Power intends, not, indeed, to forget, but to regard the various personal charges bandied about in regard to the events of last August as a "wash-out." Then follows the real core of the White Paper, namely, its comment on Immigration and Land. Recognition is expressed of the fact that the guiding rule in regard to immigration—the absorptive capacity of the country—is by no means infallible, but further specific proposals are impossible, it is stated, until Sir John Hope Simpson has reported. Reference is made to the temporary suspension of immigration, and to the Government's intention to introduce legislation so to control the disposition of agricultural lands "as to prevent the dispossession of the indigenous agricultural population." On the statement in the Inquiry Commission's Report that the selection of immigrants under the Labour Schedule ought not to be entrusted to the General Federation of Jewish Labour in Palestine (a statement for which Mr. Hyamson has been bitterly attacked by Zionists) the Government is reserving judgment, and making inquiries. Turning to politics, the White Paper refers to the visit to London of the Palestine Arab Delegation, to the steps that have already been taken in Palestine for the establishment of municipal and local Councils, and makes it quite clear that no such measure of "self-government" as the Arabs demanded can be granted, if the requirements of the Mandate are to be fulfilled. The promise, to which we have already referred, of a further and more explicit statement of policy in Palestine follows upon what may be regarded as a political damper to the Arabs; and the Paper concludes with references to the intention (for the present) to keep in Palestine two battalions of infantry, in addition to the R.A.F., to give full effect to the Report on the reorganisation of the Police drawn up by Mr. H. L. Dowbiggin, who recently returned from Palestine to Ceylon, and to the proposal for the introduction of legislation for the better control of the Press in Palestine.

From this "Statement" it is abundantly clear that the Government is resolved, however slowly, to act in the light of the Inquiry Commission's Report. Those impatient for a solution in Palestine may regret what they consider an excess of caution; and those who see a touch of Macchiavellianism in every Fabian political strategist may be disposed to think that what the Government is doing is merely the old trick of playing off one party against the other—in this case, the Zionist against the Arab. For ourselves, however, we believe that no such devilry exists in Whitehall. Where it has been possible to make decisions, to utter opinions, without violence to the situation in Palestine, the Government has declared and spoken. No man who remembers and recognises the immense work done by the Jews in Palestine, who remembers and recognises the tradition of British Colonial service in the interests of the governed, can reasonably say that, in the light of existing knowledge, more or less could at this moment have been done for either Jew or Arab. On the whole, indeed, we think that the Government can be congratulated for having proved that it is to be dissuaded by protest from neither side from what it considers to be the just path. If those who demand the granting of political rights from the Power which freed them from the Turk are still unsatisfied, and if those who appear to regard a temporary suspension of immigration as a faithless change in policy are still denunciatory, it is all the more necessary for the Government to keep a level head and ride the threatened storm.

For, after all, it is to the future in Palestine, not to the past or the present, that most observers will be turning their minds. Not that concentration on the future could ever result in the neglect of such pertinent factors in the problem as the rescue, by Jewish colonists, of sections of a derelict land, or the obtaining, in other Arab countries than Palestine, of varying measures of "self-government." Far from it, for the future must grow out of the past. Nothing is more ludicrous than the attempt, made in certain Eastern countries, to pretend that, with the advent of such things as motor-cars and self-determination, a jump of a thousand years can be made without injury. What we mean is, that old scores should be written off, and fresh attempts at contact between Arab and Jewish people in Palestine be made. It is, we fully recognise, a difficult task, a terribly difficult task. Quite apart from personal wrongs, for instance, there stands in the way of reconciliation the alleged fact that the Government itself is decreasingly trusted by Arab and Jew. This tragic version of the situation, however, we cannot accept as more than true for the moment. Both sides must eventually realise that, without the Government, they can do little, that simultaneous vilification of a Government and demanding concessions from it are incompatible. That the Palestine Administration can wholly satisfy neither the Arab nor the Jew may be admitted, but that it will fail in protecting the real interests of either we do not believe. Firmness and impartiality are what is pre-eminently required in Palestine, and we trust that, before this year is ended, His Majesty's Government will have proved that those essentially British qualities are operating with conspicuous success in Palestine. It is not difficult, with but a vague statement of general policy, for certain officials to be labelled "pro" this or "anti" this, but with the clearer definition that is promised as a result of Sir John Hope Simpson's Report, such a charge will, be believe, become impossible.

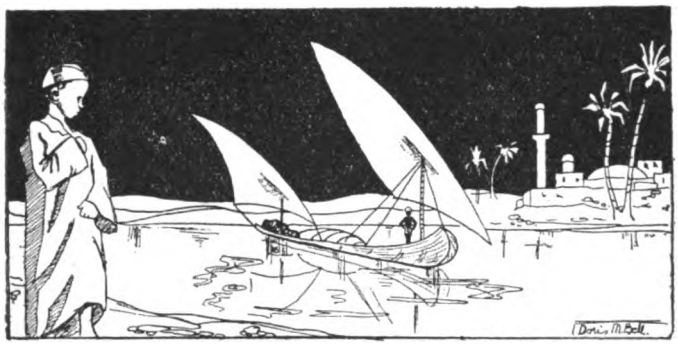
*The Near and Middle East

From Our Own Correspondents.



EGYPT.

Cairo, May 23.

The Wafd's Good Behaviour.

The behaviour of the Wafd and its leaders, both on the Delegation's arrival back in Egypt and since, has been so exemplary that even the most critical of its opponents are forced to believe that Nahas Pasha and Makram Ebeid Bey were entirely sincere in their professions of good will towards England. Most people expected scenes of great disorder last Monday, but the reception accorded the returning negotiators was, although extremely enthusiastic, perfectly orderly. The Wafd leaders had issued appeals to the populace to keep order, and it is a sign of their hold over the masses that order was kept. On only two occasions were there slightly disorderly scenes. On landing at Alexandria, Nahas Pasha, instead of proceeding direct to the lovely white and gold kiosk erected for his special benefit, passed along the lines of the assembled multitude, and the crowd, which had up till that time been quite docile, could not resist the temptation so gratuitously offered. It broke ranks, and a rush was made towards the Premier, who on seeing what he had done, had to take refuge in a hurried retreat round a square, followed by hundreds of his excited supporters. Later on another rush was made for Nahas Pasha's car when he started to address the crowd from it. These were, however, entirely minor incidents, and, taken as a whole, the Delegation's arrival was managed in a commendable manner.

It is quite generally anticipated by Egyptian political circles that negotiations will be resumed very shortly, July having been given as a probable date, but how this is to take place is difficult to foresee. A debate in the Chamber of Deputies, following Nahas Pasha's statement regarding the Delegation's work in London, showed only too plainly that Egypt will be most unlikely to make concessions in her demands regarding the Sudan. It was stressed more than once that the Delegation's mandate was to discuss proposals affecting the country, i.e., Egypt and the Sudan, and that anything not embracing those two territories and treating them as integral, was not to be considered. So, unless England is prepared to modify her attitude regarding the Sudan, it is difficult to see how negotiations can be resumed. All discussions and utterances here in Egypt have been most friendly towards the British.

The Nag Hammadi Barrage.

Work is proceeding with feverish haste on the completion of the Nag Hammadi Barrage. At the beginning of this season forty out of the hundred piers necessary remained to be constructed. A spring of water which broke through one of the coffer dams early in February retarded work for five weeks, and there is now a race against time, as the forty piers must be completed before the flood waters come down, probably towards the end of June or at the beginning of July. If the work is not finished, there will be a delay of a whole season, and the Company, Sir John Jackson Co. Ltd., and the Egyptian Government will lose heavily. When the flood water is at its peak in September and October the onslaught on the barrage is tremendous, for the volume of water is fourteen times as great as it is at its lowest during the summer. Six thousand Arabs are working day and night in shifts, and it is hoped that the work will be finished in time.

Important Legislative Proposals.

A very important proposal was made in the Chamber of Deputies this week to modify certain articles in the penal code regarding the investigation of crime. At the present time suspected persons may be arrested and put into prison, where they stay until their case is tried. As almost all cases in Egypt are repeatedly postponed, this means that sometimes innocent persons are kept in prison for a very long time without trial. A recent murder case in Alexandria provides a good example. Three men and a girl were arrested in February, 1929. The case first came before the Alexandria Assizes at the sitting of May in the same year. It was adjourned. Seven times it came up for hearing and seven times it was adjourned. It was finally heard in April this year and the accused were all acquitted. In the meantime they were in prison. The victim's heirs appealed against the judgment, and the appeal will be heard next month. The accused were released after the acquittal, but are now liable to be re-arrested. Their case is the rule rather than the exception. The proposal before the Chamber was that Articles 37, 38 and 39 should be cancelled and substituted by articles limiting the period during which a person may be imprisoned without trial. It is likely to be made law.

Another instance of the amazing length of time occupied by law cases in this country was heard of recently. A case which was first instituted 49 years ago was finally heard last week. Forty nine years ago the Government confiscated a plot of land near Cairo belonging to a farmer. The farmer died almost immediately, and his widow sued the Government for compensation. The case was postponed, and was finally settled last week. The widow won her claim and was awarded roughly £2,000 damages with interest for 29 years, amounting to about £7,000. The widow is still alive, though extremely old.

PALESTINE.

Jerusalem, May 24.

Jewish Indignation.

Sir John Hope Simpson arrived early this week, and he is already well started on his vague errand of conferring with the High Commissioner on Palestine's problems of land immigration and general development. The first

flush of indignation in local Jewish circles at his coming has almost faded away, only to be eclipsed by the outburst of rage and disappointment which supervened as the news was divulged of the virtual stoppage of Jewish immigration pending Sir John's report.

A quite new tone has emerged in Palestine's general chorus of disstisfied noises, namely a roar of savage criticism, from the Jewish side, of British hypocrisy. There have, of course, been many times during the past years when Jews have vigorously complained against some action or other, checking Jewish ambitions or hurting Jewish *amour propre*, dictated by the Home Government; but there was always a faith that it was a mistake that would be recognized and rectified, or that it was due to a passing wave of ignorance in the Government in power for the time being. But that such a thing as this could happen under a *Labour* Government, which, it was taken for granted, would most readily understand the social idealism and profit that were inherent in the Zionist experiment, and that it should happen as an immediate sequel and concession to armed ruffianism and after the repeated assurances that Great Britain did not intend to swerve by a hairsbreadth from its mandatory obligations to the Jewish people this has been received as a shock as unpardonable as it was startling.

The Jews are ignoring, as sheer "eye-wash," the official explanation that this is only a temporary stoppage, pending closer examination; they keep on emphasising the fact that the local Government as a result of its own local knowledge of the economic conditions granted an allowance of 3,000 more "labour immigrants" for the coming six months; for the Government to countermand this was, therefore, both to reject the opinion of those alone able to estimate the economic facts of the case, and to succumb to purely political pressure from the side of the Arabs and their sympathisers.

The Simpson Mission.

They have assured themselves in advance that there is nothing whatever to hope for from the mission of Sir John Hope Simpson. They would certainly not wish to seem to question his expertness or his sincerity; what they dread is, rather, his almost certain lack of "constructive imagination." They are fairly certain of what is coming. They remember Sir John Campbell (like Sir John Hope Simpson, a Scotsman, trained in the same Indian Civil Service, with long experience in the same Indian area, with exactly similar service in the Greek Refugee Settlement Commission). Sir John Campbell came out here as an economic expert in 1927 at the express invitation of the Jewish authorities, to report on Zionist land settlement and immigration. He stayed five weeks. He reported on the problem of immigration as follows (pp. 464-465, "Joint Palestine Survey Commission," 1928): ". . . the only sound and radical method of dealing with the situation is to encourage, as far as that is administratively possible, the already strong movement towards *emigration* . . . to hasten by every means possible the process of emigration, that being the sole method by which equilibrium can be re-attained . . . selected emigration could be directly encouraged by passage grants"; and all this, it should be remembered, when the local Arab-Jewish political atmosphere was comparatively serene.

Rival Jews on Immigration.

Local opinion is busily engaged, therefore, in working out the following pretty little sum in compound proportion:

If Sir John Campbell, after five weeks' survey, and after contact in the main with the Jewish presentation and interpretation of conditions and hopes, found it essential to report in the manner that he did—what blow must Sir John Simpson have in preparation, after a seven weeks' survey, and after contact in the main with the local governmental interpretation of conditions and fears, with a concentrated study of Arab conditions thrown in as well!

It certainly is no subject for the inexpert onlooker to express any opinion about. On the one side, we have the Zionists' economic expert, Dr. Arthur Ruppin, a student of the local land problems since long before the War, saying (see local Press of May 22) that there is still room for the colonization of another 50,000 more families on the land, and together with them "100,000 or 150,000 families of other occupations can easily be settled" apparently in industrial occupations.

On the other side we have the statements of the non-Jewish experts (see "Joint Palestine Survey Commission," pp53ff.) that many of the colonies have already more occupants than they can support or even keep occupied, and the Arab assertion that every fresh transfer of land to the Jews forces Arab occupants off the land altogether. Again we have some people doing elementary sums in arithmetic, dividing the number of dunams by the existing population, to prove that the country's "absorptive capacity" has already been exceeded; and on the other side the Jew retorts that Palestine's absorptive capacity "is not an inelastic factor, but that it increases in geometrical proportion to the number of Jews in the country—that the presence of 5,000 more Jews gives occupation to still a thousand more," and so on; also that the "absorptive capacity" of, for example, the area north of Jaffa twenty years ago, was precisely that of the cemeteries on the spot, whereas now it has absorbed Tel-Aviv's happy forty thousand with their comparatively large-scale industrial enterprises.

There is either a serious economic fallacy at work, according to which the Jews are wrong, or else there is an imponderable, incalculable factor in the case, in the light of which the Jews are in the right.

Strike by the Jews.

The Jews have introduced us to a novel kind of strike. Last Thursday the *Vaad ha-Leummi* (the Jewish National Council, proclaimed a "General Strike" of all the Jews in town and village throughout all Palestine as a protest against the "iniquitous edict" against Jewish immigration. But it was a strike which avoided the morning hours till midday, by which time most people here get through their day's work; it was not to apply to those Jews engaged in services of public utility, such as water and electric power supplies; and it was not to apply to any Government offices. So Thursday afternoon took on the complexion of Palestine on the Sabbath, with nobody suffering the slightest inconvenience. Local Jewry was for once solidly united, even the ultra-Orthodox bartering their exclusiveness for a promise from the Zionist authorities to discountenance football on the Sabbath. The only "blacklegs" seem to have been the Jerusalem Girls' School run by the Anglo-Jewish Association.

THE PERSIAN GULF.

Bahrain, May 2.

Oil.

Major Frank Holmes, as representative of an oil syndicate, has arrived in Bahrain. The Syndicate has held an important oil concession in the islands for several years, but until now its activities have been confined to preliminary investigations. It is now understood that work is to be begun in real earnest. Six drilling machines are arriving shortly, together with a staff of engineers, and borings are to be made in various parts of the islands.

There is much speculation among the local population on the chances of finding oil, and many people already assume that in a very short time Bahrain will become a second Abadan. The same Syndicate holds a concession in Kuwait.

Some years ago this Company undertook a contract for the Government of Bahrain to bore a number of artesian wells in the towns of Manamah and Muharrak. Before this method of finding water, most of the drinking water was brought from a well in the centre of the main island or from the numerous fresh water springs which rise through the bed of the sea at various places along the coast. Men carrying leather water-skins dived down to the sources, filled the skins with fresh water, and carried them up through the sea to the surface. It is supposed that the water originates in some distant mountains on the mainland of Arabia.

Exclusion of Vegetable Ghee.

The import of all kinds of vegetable ghee into Bahrain has been forbidden. The measure was passed on the recommendation of the two Municipal Councils who in some measure fulfil the duties of a Chamber of Commerce. The reason for the prohibition is that cheap vegetable ghee was being mixed with the genuine material and sold as pure animal ghee at a large profit. To the uninitiated the difference can be detected only when it is cooked. The most effective method of preventing this deception was the total exclusion of all artificial ghee. The result is that persons who cannot afford to pay for the expensive genuine article are now compelled to do without any, but the consciences of the Municipalities are now at rest.

Flying Boats.

The Southampton Flying Boats, whose headquarters are now at Basrah, have visited Bahrain frequently during the last few months. They have recently been granted permission by the Shaikh to establish a permanent camp on the outskirts of Manamah close to their anchorage, which they will use in future when they visit Bahrain. Bahrain is a very convenient halting place between Basrah and Muscat. The Shaikh and various members of his family have been for flights in these machines, and the Arabs of Bahrain have become so accustomed to the sight of them that the recent sudden arrival of a flying boat on the water in the midst of the pearl fleet caused so little excitement that none of the divers left off diving. South of Bahrain, along the Pirate coast, they are still looked on with considerable suspicion. It is the custom of many of the leading pearl merchants, both Arabs and Europeans, to arrive in Bahrain at the beginning of the pearl season in aeroplanes specially chartered from the Imperial Airways. There is always an element of mystery and surprise about their arrivals and departures, and the pearl market in Bahrain fluctuates accordingly. The people here hope that some day the route to India which is used by the Imperial Airways will run through Bahrain and Muscat instead of, as at present, along the Persian coast.

Prospects of the Diving Season.

The short season which precedes the main diving season started about a fortnight ago. News from the pearl banks is that the catch is a poor one, but rough weather may have accounted partly for this. The result of the short season, when the weather is good, is usually an indication of the main season. The condition of the pearl market in Bombay continues to be dull. There have been one or two sales in Bombay, but none that affects Bahrain. Most of the European buyers have left Bombay, and a number of the Bahrain merchants are on their way back to Bahrain. The official date for the opening of the main diving season has been announced by proclamation to be May 19.

The Education Department.

Two Syrian schoolmasters in the Government schools were recently dismissed by the Department of Education. They obected to some proposed reforms in the administration of the school and organised a strike of masters and students, which lasted for several days. They were sent back to their homes in the Lebanon and from there they have been conducting a violent newspaper campaign in the Syrian, Persian and Iraqi Press. Although their dismissal was a matter in which only the local Government was concerned, the newspaper attack is mainly directed against the British policy in Bahrain. Nowadays anti-British propaganda has more news value in this part of the world than criticism of the local politics and affairs of Arab or other States.

THE HIJAZ.

Jidda, May 4.

Arrival of King Ibn Saoud.

The long expected return of King Ibn Saoud to the Hijaz is at last an accomplished fact. His Majesty, having left Riyadh on the afternoon of April 24, and travelling by easy stages, reached Mecca just before sunset on April 30. The next two days were fully taken up with various entertainments arranged to celebrate the King's return; but on May 3, King Ibn Saoud arrived at Jidda on a flying visit, returning to Mecca this afternoon to make ready for the celebration of the Pilgrimage, the culminating ceremony of which falls this year on May 8. His Majesty, who appears to be in excellent health, is accompanied by practically the whole of his family, the royal party which set out from Riyadh in some 300 motor cars of various kinds numbering no fewer than 1,260 persons. It included five of the King's brothers, and, counting the Amir Faisal, who went out from Mecca to meet his father at Ashaira, all the seventeen surviving sons of King Ibn Saoud—a historic and unique reunion, for it is probable that all the seventeen sons have never been together before in one place. In addition there appear to be four or five of the King's grandsons and many nephews and cousins who will serve to make this year's Pilgrimage memorable for an unprecedented gathering of the great clan of Saoud in the Holy City, which it wrested from the Hashimite dynasty only four years ago. Otherwise the pilgrim invasion from overseas has not come up to expectations, and, apart from the ever faithful Dutch East Indies, the only country which has not disappointed the hopes of the Hijaz seems to be Egypt, whose pilgrims number something like 20,000. The grand total of overseas pilgrims up to date is only 74,978, and the few ships that have arrived since this figure was compiled or are still due are scarcely likely to raise the number much

Digitized by Google

above 80,000—which is distinctly disappointing both to the Government and to the local merchants and others economically interested in the Pilgrimage.

The Weather.

It would seem that the unusually long spell of cool weather enjoyed during the past six months is now definitely at an end. On April 20 a fierce sand storm sent the maximum temperature soaring up to 102 degrees F., and then the Clerk of the Weather seemed to repent of his villainy; but after a week or so he resumed his unpleasant habits and early May has recorded maxima of 97 and 99.5 degrees, while suggesting that it has something worse up its sleeve for those who stand on Arafat on the 8th. Nevertheless the general health of the country seems to be excellent, and an average maintained over a long series of weeks, of between 30 and 40 deaths from smallpox and ailments of the stomach is very satisfactory at the height of the pilgrim visitation. In fact the smallpox figures are almost negligible this year. These facts were doubtless noted with satisfaction by General Duguet, Inspector-General of the International Quarantine Service in Egypt, who paid a private visit of a few days to Jidda during the latter part of April.

Diplomatic Activities.

On April 23 the Turkish Diplomatic Representative and Madame Sani entertained a large party of local diplomatists and others to tea to celebrate the anniversary of the first meeting of the Turkish National Assembly. And on the following day it was the turn of Ain al Mulk, Persian Chargé d'Affaires, to receive the congratulations of the official and unofficial notables of Jidda and of the Diplomatic Corps on the anniversary of the coronation of H.M. the Shah. The Soviet Minister, as doyen of the Corps, made a short speech on behalf of himself and his colleagues, to which Ain al Mulk replied. Monsieur Maigret, the French Chargé d'Affaires, returned from his short visit to Syria on April 25; and the Diplomatic Corps would now seem to be at full strength except that Sir Andrew Ryan has not yet arrived to take up his duties. He is expected, however on May 6.

Apart from these more or less normal vicissitudes the outstanding event in the Jidda diplomatic circle has undoubtedly been the visit of an official mission from Poland, consisting of Count Edward Raczynski, of the Polish Foreign Office, and Dr. Jakob Szynkiewicz, the chief Mufti of the Polish Muslims, who are said to number some 15,000 souls. This mission brought gifts and letters from the President of the Polish Republic and from Marshal Pilsudski for the King and the Hijaz Government, and was duly received by His Majesty, who, in welcoming it, expressed his pleasure at the resulting establishment of diplomatic relations between the two countries and at the prospect of future economic links between them. Dr. Szynkiewicz remains behind to perform the Pilgrimage, while Count Raczynski and his wife, an Englishwoman and the sister of Sir Charles Markham, Bart., left to-day on their return to Poland.

Mention should also be made of the fact that the Persian Chargé d'Affaires presented his Letters of Credence to the King yesterday; as also of the fact that Capitaine Ibrahim Depui, a former French Consul at Jidda, has recently arrived here for the Pilgrimage. And finally it may be noted that Mr. McDonald, formerly of the Sudan Civil Service, is expected here in the not very distant future to discuss with the King certain matters connected with the relations and boundaries between the Hijaz and Trans-Jordan. The time is certainly ripe for a serious effort to solve this long unsettled problem, the final disposal of which will fittingly round off the recent settlement of King Ibn Saoud's difficulties on the Iraq and Kuwait frontiers.

In this latter connexion the latest issue of the *Umm al Qura* (published weekly at Mecca) contains an official *communiqué* refuting an alleged statement that Najd had accepted the Iraq point of view regarding the frontier forts. The truth of the matter as stated in the *communiqué* is that it was agreed to let the matter go to arbitration, if the two parties had not agreed on a settlement thereof within six months. It would seem that the treaty said to have been signed at Baghdad on March 10 was not signed, but merely initialled.

May 10.

Sir Andrew Ryan arrived here on H.M.S. Dahlia on May 6; and two days later Fuad Effendi Hamza, Minister for Foreign Affairs, returned from Syria just in time to attend the Pilgrimage ceremonies, which were duly celebrated at Arafat on the 8th. Yesterday was the *Id al Dhaha* or anniversary of (Abraham's) sacrifice; and we are now in the midst of holidays. The ships in harbour, only just more than a dozen this year, are holding a regatta to-day.

KING'S BIRTHDAY HONOURS.

The following awards, which are likely to be of particular interest to readers of THE NEAR EAST AND INDIA, are taken from the official list of honours conferred by the King on June 3, the occasion of his sixty-fifth birthday:—

BARON.

BUXTON, the Right Hon. Noel Edward, M.P., Minister of Agriculture and Fisheries.

KNIGHT.

BENNETT, Captain Ernest Nathaniel, J.P., M.P., Member of Parliament for Central Cardiff since 1929. For political and public services.

COLONIAL OFFICE LIST.

K.C.M.G.

PALMER, Colonel Frederick, C.I.E., M.Inst.C.E., of the firm of Messrs. Rendel, Palmer, and Tritton, Consulting Engineers to the Crown Agents for the Colonies.

O.B.E. (Military Division).

SMITH, Lieutenant (Local Major) John Warner, Regular Army Reserve of Officers, Company Commander, Trans-Jordan Frontier Force.

C.B.E. (Civil Division).

EDMONDS, Cecil John, Esq., O.B.E., First Assistant Adviser to the Ministry of Interior, Iraq.

O.B.E. (Civil Division).

KITCHING, Geoffrey Charles, Esq., Administrative Inspector, Ministry of Interior, Iraq.

MILLER, William James, Esq., District Officer, Nablus; for services during the disturbances in Palestine in August, 1929.

MUNRO, James, Esq., M.C., Deputy Superintendent, Department of Police and Prisons, Palestine; for services during the disturbances in Palestine in August, 1929.

SWANN, George Jameson, Esq., Traffic Manager, Port Directorate, Basrah, Ministry of Finance, Iraq.

FOREIGN OFFICE LIST.

K.C.M.G.

RUSSELL, Claud Frederick William, Esq., his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Berne.

C.M.G.

HEWINS, Harold Preece, Esq., O.B.E., Director of the Commercial Intelligence Branch, Central Economic Board, Khartoum.

SQUIRES, Herbert Chavasse, Esq., M.D., Director, Khartoum Civil Hospital.

DIPLOMATIC LIST.

C.B.E. (Civil Division).

PEARSON, Burton, Esq., O.B.E. Lately Traffic Manager of the Egyptian State Railways.

O.B.E. (Civil Division).

BARTY, Thomas Patrick William, Esq., Lecturer in Civil Engineering, Gordon College, Khartoum, and Municipal Engineer, Khartoum.

GUNNINGHAM, Herbert William, Esq., Archivist to his Majesty's Embassy at Constantinople.

TEALL, Frederick Hathaway, Esq., Commandant, Suez Canal Police, Port Said.

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 15.

The Viceroy's Appeal.

The Viceroy's appeal was welcome. His Excellency speaks in it of "the natural and true development of India's political life." If that line is to be the one taken, if those are to lead and guide in whose minds there is no doubt that free parliaments will ultimately bring peace to India, one can only wish that the authorities would get on with that policy. India, in the autumn and winter of 1929, in the spring of 1930, mattered far more to Great Britain, had this only been seen, than disarmament or Egypt. If getting on with the policy was rightly begun by the Viceregal announcement of November 1 last, the next thing to do was to ascertain when the presentment of the Report of the Statutory Commission might be counted on, and, that ascertained, to summon the Round Table Conference for that date. If that policy is to be successful, if it is to bring comparative peace to India for a few years (it may not even do that), there must never be a delay that might be avoided; the successive steps ought to be taken, each one as soon after the one before as possible.

The Dwindling Hope.

There was to be a meeting of the All-Parties' Conference, and Mr. Jayakar, one of those who, it was hoped, would attend it, being unable to attend it, wrote to the President, Sir Parashuram Patro, a letter which was published. That was a day or two before the publication of the Viceroy's appeal. "In my opinion," Mr. Jayakar said in his letter, and it was by no means only his opinion, "the present movement of civil disobedience is a movement of despair. It is born of, and fed by a feeling—which the Government has done very little, in recent months, to combat—that the proposed Round Table Conference is a myth, if not a trap, and that India can obtain nothing through the medium of peaceful negotiation. Since the announcement of the Round Table Conference last November, Government have taken no active steps to create confidence in the popular mind that they are in earnest about the matter, or that the proposed Conference will lead to results which will satisfy bold Indian opinion. By their inaction Government are making the Round Table Conference an odious apparition. They appear to have exhausted themselves with their supreme effort in November last. Since then they have contented themselves with mere repetition of the inane formula, stated by the Secretary of State only three days ago, that the policy of the Government to invite a Conference stands despite everything that has happened. That is not enough to meet the present situation." You have a man there who six months ago saw in the Round Table Conference something that could be worked. Now that hope has died.

Action.

What was wanted was immediate action. The Viceroy in his appeal, after speaking of "the natural and true development of India's political life," goes on to say: "Such development depends upon the solution of real problems among which there is none more important than that which affects the future position of minorities. So far as this is concerned it is evident that no settlement can be considered satisfactory which does not carry the consent of, and give a sense of security to, the important minority communities who will have to live under the new constitution." The Viceroy should have said that six months ago. The immediate action called for after the Dominion status announcement of last November was that the Viceroy himself should summon an All-Parties' Conference in India. He should have been advised that, if the political leaders were to move campactly along the the road that he saw as India's true political development, and not fall asunder into worse and worse disunion, they must be kept under his own eyes until, in a Conference all the proceedings of which should have been published, they had agreed upon what, when the Round Table Conference met, India should put forward as the settlement she would propose of the question of the minorities, and of all the other vital questions. That is surely seen quite clearly, now we are able to look back. If an All-Parties' Conference had been in session from day to day throughout December, it would have been impossible for Mr. Gandhi and Pandit Motilal Nehru (I quote from the Viceroy's appeal of this week) "to make it plain that they were not prepared to participate in the Conference except upon new conditions which had found no place in my announcement"; or they would have been unable to do that with the support of a large following throughout India. Even such as Mr. Patel, last December, were ready to agree to make the most they could of the Round Table Conference. One imagines almost all the leaders as now saying: "What will be the use of it? They will give us nothing real." That is, however, to hide the fact that they are hopelessly disunited.

An Avoidable Delay.

As there are in London numberless men as well acquainted with the working of the administration here as any men in India are, and as it would be a simple matter at any time to send to London some of the men now holding office in India to reinforce those in London, it was wrong to assume that, when the Statutory Commission and the Indian Central Committee had presented their reports, there would have to be time given for His Majesty's Government, in consultation with the Government of India, by despatch and cablegram, "to consider these matters in the light of all the material then available," giving India time in which, again to hide her own disunion, to make the Report of the Statutory Commission appear to herself a fly-blown thing. That, one is convinced, is what will happen, if there is to be the interval of time, with nothing to fill it, that is now proposed between the publication of the Statutory Commission's Report and the Round Table Conference that will make the Report the basis of its discussion. The consideration of "these matters in the light of all the material then available" could have been begun, and in fact was begun, if not in an organised way, long before the presentation of the Report. Men in India and in London have been considering "these matters" for years. What else should we consider, when so much depends and depended on clear seeing?

The Last Hope.

The last hope is that the authorities will look hard at things, and really see them. The date of the Round Table Conference has now been announced—as about October 20. It is too late, one may assume, for a man to hope that it will be held much sooner. The Viceroy, in his appeal, was looking at things, when he said of October 20: "this date is later than . . . I could have wished:" but was he looking at facts, when he spoke of the delegates from India having "the advantage of establishing personal relations with Dominion representatives who will then be present in London in connexion with the Imperial Conference?" Those personal relations would mean too little to the political leaders from India, or they mean much too little to them now, that they should be mollified by the thought of them into forgetting their disappointment that the Round Table Conference is to be held at a so much later date than they hoped. But I was to speak of the last hope. It is—this is the hope of those I have kept in touch with throughout—that, when the Report of the Statutory Commission is at last in our hands, the Government of India will then call an All-Parties' Conference in India, and say to it: "Now we have seen what there is in this Report, let us settle what you are to put forward in London in the autumn as India's proposed solution of the question of the minorities, and the other vital questions." That seems to us the last hope, the only way of keeping together those leaders in India who have not gone into open rebellion against the Government.

INDIA IN PARLIAMENT.

It is not often that Indian affairs are made the subject of a full-dress debate in both Houses of Parliament within a period of less than three days. The motives which actuated those who initiated last week's discussions were not, however, identical, though Lord Winterton, in the Lower, and Lord Peel in the Upper, House were equally concerned to emphasise the sympathy and support accorded by the members of all parties to the Viceroy in his responsible and lonely task. The misgivings of those who thought the eve of the publication of the Statutory Commission's report a singularly inopportune moment to depart from precedent, it may be said at once, were proved groundless. So far from embarrassing the Government of India and the local administrations at a critical juncture, the display of solidarity in the tributes to Lord Irwin and all who were bearing the heat and burden of the day was so impressive as to be calculated to have precisely the opposite effect. In the case of the House of Commons there were especially cogent reasons for having the India Office Vote put down for that day (Monday, May 26). There has been no opportunity of considering the Indian Estimates for nearly two years, and except for two special occasions, when the discussion was confined to one particular issue, there has been no debate at all on Indian subjects in the interval.

In the account which he gave of the origin of the recent disturbances, Lord Winterton voiced a belief which is widely held in this country and, in the main, is correct. The supporters of the Congress creed, he contended, are irreconcilable opponents of the British Connexion, for whom the absence of Indian representation on the Statutory Commission itself provided an excuse rather than a grievance. They occupied in reality only a small corner of the Indian scene; they comprised by no means all Indian politicians; they had caused troubles no worse than those of 1919-21, although they had certainly intensified the conflict between Muhammadans and Hindus: and there could be no parley with such undisguised breakers of the law, who were undoubtedly assisted, if not exploited, by Communist agents from outside and unfortunately encouraged in their nefarious practices by the attitude of a rabidly intolerant section of the British Press.

The permanent and solid factors in Indian progress are so obscured these days by the prominence given by the Press and by news agencies to the Congress activities and the graver disturbances on the Frontier that Mr. Benn did well to draw the attention of the House in his reply to the continuous commercial and financial progress of British India since the War, although, as Lord Reading pointed out later "in another place," the success of the recent sterling loan was not perhaps the happiest illustration. It was also well to emphasise the evidence provided by the growth of co-operative credit societies and the no less remarkable development in labour legislation during the last ten years. In dealing with the more recent and spectacular events, the Secretary of State rightly reminded members of the Left Wing of his party that the first duty of the Government of India was to govern—not least in the interests of Indians themselves. The tribute to the officials of the India Office, and in particular to Sir Arthur Hirtzel, whose approaching retirement is generally regretted, was well merited, as also his warm appreciation of the services of the officials of both races in India. A reaffirmation of the complete understanding between Lord Irwin and the British Government was not the least important contribution made by Mr. Benn to a debate which was marked throughout by a degree of unanimity, restraint and responsibility on the part of all the principal speakers, which should greatly encourage the Viceroy and his advisers in their thankless and unenviable task.

Although Lord Peel when inviting the Government to make a statement on the recent disturbances and illegal activities in India, took due notice of the earlier discussion "in another place," he made it clear that his purpose was rather to concentrate attention on that one particular aspect of the Indian problem. The fact that in the event the Lords' debate ranged over nearly as wide a field was an advantage rather than otherwise, for the knowledge and experience of the distinguished array of former Viceroys and Governors who participated in the subsequent discussion made the proceedings of more than ordinary interest and importance. In the main the late Secretary of State was anxious to receive an answer to three particular questions. Were the recent disturbances isolated and sporadic or were they connected together by a general system, by some superior control, whether operating in India or outside? In the latter event, and latest advices appeared to give colour to the belief, did the Government not consider that the time had come not merely to arrest the Congress leaders in different districts but to strike at the centre of the disturbances in the newly formed Congress Committees? Could not the Government do more in the way of propaganda in order to stem the tide of misrepresentation and calumny?

After Lord Reading had eloquently pleaded for the fullest support to the Viceroy and all who are engaged in the administration of India in times of such difficulty and warmly endorsed Lord Peel's tribute to the work of the military and the police, the late Viceroy made it clear that in his view the most serious aspect of the recent disturbances was the definite organisation of civil disobedience, which struck at the very heart of the Government. "If it succeeds it is a violent blow, if it manages to survive it has really dug the grave of government, as we understand it in India. I have myself the strongest opinion that in all matters that relate to civil disobedience the Government must put forth all the weapons at its command in order to destroy it and break it." Lord Zetland, addressing the House for the first time since his assumption of the less familiar title, while conceiving it the duty of the Government to lend no ear to the counsels of despair which would put back the hands of the clock, but "to go forward steadily and firmly upon the path which has been marked out, not by this Government only but by all parties in this country, turning neither to the right hand nor to the left," made it clear that to pursue such a policy successfully the Government in both countries must have both the will and the means wherewith to restore order and to ensure respect for the law. Did the authorities agree that the probability was that the Government of India would be faced in a steadily increasing degree with the necessity of employing troops, both European and Indian, for the performance of duties which are primarily police duties? And, if so, were they satisfied that they had at their disposal resources adequate for the purpose?

Lord Lloyd, while associating himself with the views of the previous speakers, emphasised particularly the need for plain speaking on the subject of Soviet propaganda and pertinently recalled that the best atmosphere for the consideration of the Statutory Commission's Report would be the restoration of law and order as rapidly as possible and the remembrance that the masses of the people are more important than the consideration of the political views of a minority. Lord Russell wound up a very instructive debate with a brief history of the events in question which, in the opinion of the Government of India, are directed riots of crowds with a definite organisation behind them, although no definite evidence of the complicity of Moscow is available.

THE BOMBAY DINNER.

The Rt. Hon. Earl Russell, Under Secretary of State for India, was the principal guest at the annual reunion dinner of past and present European residents in the Bombay Presidency held at the Hotel Victoria on May 30. Among the other guests were three former Governors of Bombay—Lord Lamington, Lord Lloyd and Sir Leslie Wilson—Sir Atul Chatterjee, High Commissioner for

Digitized by Google

India, Sir Arthur Hirtzel, Sir Campbell Rhodes, Mr. Justice John Beaumont, Chief Justice designate, Mr. H. A. F. Lindsay, and Mr. F. H. Brown. Sir Malcolm Hogg presided.

Proposing the toast of "The Presidency of Bombay and Our Guests," coupled with the name of Lord Russell, the Chairman read a message of greeting from the President, Sir Ernest Jackson, and members of the Byculla Club, and said that it had always been a proud boast and cherished belief of those Britons who had lived in and loved the Presidency that the relations between Britain and India were more cordial and based upon a larger measure of mutual respect, understanding and—what always goes with understanding—sympathy than anywhere else in India. He did not know whether that was true to-day, even in a comparative sense. They had certainly sadly deteriorated, particularly during the last few months.

"The British community at present resident and working in the Presidency," Sir Malcolm Hogg continued, "have a far less easy and pleasant time than we had, who only knew it in happier and less convulsive days. There can be no doubt about it that the Briton whose work to-day lies in the Presidency is subjected to an atmosphere of suspicion, hostility, misrepresentation and opposition, which was happily unknown to us who left Bombay years ago. This applies alike to the Government servant, the merchant, and the soldier, and requires from them qualities of patience, forbearance and steadfast courage, which were not called for from us older residents. It is an important factor in the health of the Presidency that the British community now resident there should not fail, even under the most difficult and depressing conditions, to continue to display those qualities which we like to think of as pre-eminently British. I feel sure that I shall have the support of all former residents present if I pay a tribute of admiration, respect and gratitude to the British community now resident, not only in our Presidency, but throughout India, for the way in which they have responded to the call and maintained the reputation of our race for infinite patience, unwavering courage and devotion to duty."

After a warmly appreciative reference to the work of all ranks of the Indian police force, and especially the lower grades, Sir Malcolm said that it was easy to sit in England and criticise when no responsibility could rest upon the critic to put his own recommendations into practice and abide by the issue. In spite of the carping criticism to which he had been subjected in this country and in certain sections of the British Press the Viceroy, on whom the heaviest burden of all lay, continued to enjoy a remarkably large measure of confidence in India. He commanded the confidence of the majority of the British community, the confidence of all except the most extreme sections of Indian opinion and, last but not least, the confidence of all the Indian Princes. That was a very great asset and a very remarkable achievement, and he personally believed that there was no man in our public life to-day better fitted by his character, his qualities and his high purpose than Lord Irwin to steer a right course and bring the ship of British policy into smoother waters. For he refused to think that the present bitterness of racial feeling would last or that the work of Great Britain in India was finished. On the contrary he looked forward with confidence to the day when "the various races and communities in our Presidency will again be able to live together in peace and mutual appreciation of each other's qualities and when the British community will again be allowed to play their part in the peaceful and orderly progress, political, economic and cultural, of the Presidency of Bombay."

Responding to the toast, Lord Russell said that at this moment, when in some quarters of India the blessings which had been conferred on that country by British rule seemed not to be fully appreciated, he thought it would not be inappropriate or unseemly to recall something of India's debt to this country. An Englishman always boasted with difficulty about his own country—he lacked the American shamelessness in this matter—but sometimes his reticence might lead to misunderstanding elsewhere.

"What have we done for India? In material matters, we have given her railways, roads, irrigation and markets; we have practically destroyed the periodical famines, and we have done much to combat deadly diseases. To a moderate extent we have given her education, and, above all, we have given this vast continent the blessings of internal peace. India is not one race, nor one religion, nor one caste, not even one speech. Under one rule warring religious factions, tribal jealousies, and the dangers of the North-West Frontier have all been kept in abeyance, and India has profited by internal peace and external security. In one word, we have given India the blessings of civilisation."

And now they found the Indians themselves expressing a desire for an increasing share in their own government. Such a desire was laudable in itself, and one with which those in this country, who were with difficulty learning how to govern themselves, would find it difficult not to sympathise. Some of them might wonder, though, whether murderous attacks upon police or destructive riots were the best methods of expressing a capacity for self-government, particularly when there stood open to all shades of opinion in India the opportunity of coming to a Round-Table Conference to consider in perfect freedom any suggestions that might be made by Indian representatives, in the hope that they might, as a beginning, arrive at some agreement among themselves.

"We are offering to India," Lord Russell proceeded, "a very definite step in advance; but for such steps to be successful they must have the assent and goodwill of the population of India, and that involves not merely the Hindu, but the Mohammadan, the Sikh and the depressed classes, for it has always been our boast that we try to treat all people equally, and no new form of government could be stable which was not founded upon general assent.

"I know that it is very dear to the heart of my right hon. friend the Secretary of State that the steps we are taking should be fruitful, well advised and well considered, and, in spite of the unfortunate turbulence which has disfigured some portions of the Indian Empire during the last few weeks, I am sure that everyone in this room will join with me in hoping that the unique opportunity which is now offered to India to help in shaping its own destiny will be taken full advantage of, and that no racial animosities, no real or imagined dislike of British government, and no false pride will prevent every patriotic Indian from doing his best to make the coming conference a lasting success."

The toast of "The Chairman" was proposed by Sir William Sheppard and the proceedings concluded with a hearty vote of thanks to Mr. W. A. Haig Brown, the Honorary Secretary. The company numbered over 190, among others present being:—

Sir Charles Armstrong, A. H. S. Aston, Sir Thomas Birkett, Sir John Bowen, W. H. Brady, J. S. Bruce, E. J. Bunbury, D. S. Campbell, P. R. Cadell, S. Calvocoressi, Sir George Carmichael, Col. R. Markham Carter, W. N. Cartland, Sir Atul Chandra Chatterjee, Sir Louis Crump, Maj.-Gen. H. A. V. Cummins, Sir Robert Dunlop, F. A. H. East, Sir Charles Fawcett, Maj.-Gen. Sir Reginald Ford, Sir Arthur Froom, J. F. Gennings, A. Gilchrist, H. T. Gorrie, A. K. Graham, W. Greaves, A. M. Green, J. Greig, W. A. Haig Brown (hon. secretary), L. W. Hartley, G. W. Hatch, Sir Edward Headlam, Sir John Heaton, H. P. Hebblethwaite, Sir Robert Holland, Brig.-Gen. H. R. Hopwood, Col. W. T. C. Huffam, R. D. Hughes, Sir Patrick Kelly, A. F. Kindersley, Sir D'Arcy Lindsay, Capt. J. B. Lynch, Col. F. P. Mackie, Sir Reginald Mant, Sir Amberson Marten, J. R. Martin, I.C.S., W. S. Millard, E. Miller, C. N. Moberly, A. B. Morrison, Sir Charles Mules, Sir Hugh Murray, J. E. Needham, J. P. Orr, Rt. Rev. Bishop Palmer, E. G. Pearson, Col. R. E. P. Pigott, Sir Stanley Reed, A. C. Rumboll, Sir Leopold Savile, H. H. Sawyer, Sir William Sheppard, C. G. Stileman, Sir Thomas Strangman, Col. A. Street, V. A. Stuparich, G. F. D. Tennant, Sir Montagu Turner, Sir John Wallinger, H. G. Weber, Sir Walter Willson, D. W. Wilson, Sir Leslie Wilson, P. R. Wilson, and Col. C. E. H. Wintle.

THE PALESTINE PROBLEM.

The Jewish Agency for Palestine has prepared a Memorandum on the "Report of the Commission on the Palestine Disturbances of August, 1929" for submission through the Secretary-General of the League of Nations to the Permanent Mandates Commission. The Report itself, together with the "Statement with regard to British Policy in Palestine," recently issued as a White Paper by the British Government, will be submitted to the Permanent Mandates Commission, and it is the desire, no doubt, of the Jewish Agency to have its own comments on the Report studied by the Commission at the same time. The Memorandum, it must be admitted, is an inevitable corollary to the Report, which, as it had not been accepted unanimously by the Shaw Commission, even its compilers could hardly expect to pass without a challenge. Before the Jewish Memorandum appeared, however, the White Paper had announced that the British Government accepted certain findings of the Commission, and was engaged on a further study of the questions of immigration and land settlement with a view to a more definite statement of its future policy. As the Shaw Report leaves the reader impressed with the seriousness of the Palestine situation, while it urges him in so many words not to dwell unduly on the question of responsibility for the tragic events of last August, its reaction on the British Government may be supposed, in view of the ready acceptance of the Commission's main findings, to take the form of an anxiety to be done with the past and, at last, to formulate and carry out a more definite policy in Palestine. In these circumstances, however natural may be the anxiety of the Jewish Agency to subject the Shaw Report to a critical analysis, it would be unfortunate, if the Memorandum came to be regarded as a further move in a Zionist campaign against the British Government. As is well known, the employment of Counsel in the proceedings of the Shaw Commission gave to the course of the investigation the aspect of a trial in which the Jews were plaintiffs and the Palestine Government and the Arabs were joint defendants. The character of the Report issued by the Commission may well have been largely conditioned by this circumstance.

It may be doubted, therefore, whether any useful purpose will be served by too close an analysis of details in the Shaw Report. If it has been the means of bringing about a fresh examination of British policy in Palestine, it will have achieved a useful purpose. The interests of all concerned require the Jewish Agency to come to an understanding, and work in harmony, with the British Government, for nothing could be more prejudicial to the Jewish cause in Palestine than the creation of any state approaching settled antagonism between the Agency and the British authorities, as a result of over-emphasis on the past to the exclusion of the far more important future.

The Memorandum makes an inauspicious start by seeking to prove too much on the strength of words and phrases of which there is no agreed definition. In its challenge of the Shaw Commission's alleged excursion into considerations of major policy it ignores the fact that its own interpretation of what constitutes major policy would not be accepted by the Commission and may also fail to appeal to the British Government. It is equally surprising to find that the able author of the Memorandum affects to discover a contradiction between the statement of the Commission's Report that "There was no clear direction to assist either party in the fulfilment of their aspirations" and the obligation laid upon the Mandatary in connexion with "the establishment of the Jewish National Home," as though there could be no possible Jewish National Home which did not conform entirely to all possible aspirations connected with it. Similarly, a "land system . . . having regard to the desirability of promoting the close settlement and intensive cultivation of the land" need not necessarily impose upon the Government itself the actual close settlement and intensive cultivation. It is not until the third chapter on "The Nature and Causes of the Disturbances" that the Memorandum is on safer ground. Here it has no difficulty in riddling the findings of the Commission's Report with effecting criticism on points of detail. It sets out to prove how little of the actual evidence obtained against the Arab authorities has been used in the findings of the Report, and the summaries given of the evidence could not be easily dismissed, if any sound purpose were to be served by going over the ground again. There, however, is the rub. The Memorandum was called for and could hardly be avoided. It affords further indication of the mistakes committed on all sides, and is calculated to enhance the regret of those who wish Palestine well that a more strenuous and better directed effort should not have been made by all concerned to come together and to pull together, instead of settling down to a condition of accepted hostility.

JEWS AND THE PALESTINE MANDATE.

In the Central Hall, Westminster, on May 26, a meeting was held under the auspices of the Victoria Institute to hear Mr. Israel Cohen, Secretary of the Zionist Organisation, read a paper on "The Jews under the Palestine Mandate." Mr. Cohen supplied very lucidly a history of the Jewish people in Palestine since the promulgation of the Balfour Declaration in 1917 and an account of their accomplishments up to the riots of August, 1929. He contrasted the description made by Lord Robert Cecil of "Judæa for the Jews" with the "whittled-down" definition of the Declaration contained in Mr. Churchill's Memorandum of 1922, which, however, the Zionist Organistion could not but accept. Then, passing to the Report of the Inquiry Commission, whose findings he roundly denounced, he expressed anxiety whether the hostility to the establishment of a Jewish National Home in Palestine that was, according to the Zionists, to be found in the Palestine Administration, was not spreading to the British Government itself. For the recent stoppage of immigration into Palestine was an absolute violation of the Mandate for Palestine. Nor was much encouragement to be found by Jews hitherto ready to make sacrifices for the upbuilding of a National Home in Mr. Henderson's recent words at the meeting of the League of Nations when he suggested the realisation, within the framework of the Mandate, of the legitimate aspirations of the non-Jewish inhabitants of Palestine. Mr. Cohen, in short, did not mince words in suggesting that Great Britain was breaking faith towards the Jewish people.

Several speakers afterwards supported his view; many deplored the cessation of immigration, and most thought that the Jews had been unfairly treated. It was, however, contended that, before condemning the action of British officials, their side of the case should be heard.

In reply to several questions, Mr. Cohen affirmed, among other things, his profound conviction that the Jews had brought nothing but advantages to the Arab population of Palestine. He further suggested that, if it were found that there was not enough room in Palestine itself for the Arab population, a move might be made by them to Trans-Jordan, where vast tracts of land still were uncultivated and where the *fallahin* of Palestine would be living with their brothers.

SHAIKH SAID'S SON.

It is announced in the Turkish Press that Selahattin, son of Shaikh Said who was hanged as a consequence of the Kurdish rebellion of 1925 against the Government of Angora, was recently arrested at Erzeroum, and is now at Ankara awaiting his fate. It is said by the Turks that Selahattin's military training at Baghdad was undertaken with the one idea of avenging his father's death, that he worked for a revival of Kurdish feeling in Diarbekhir and Mardin, but, not receiving a favourable reception there, he worked in Erzeroum with the "Association for Northern Kurdistan" until he was arrested.

A Stadium, it is announced, is shortly to be constructed at Ankara, from plans prepared by Dr. Jansen, who has been consulted by the Government on the subject of town-planning for the Turkish capital.

TO-DAY

June 5, 1930 (New Style).
May 23, 1930 (Old Style).
Muharram 8, 1349 A.H., of the Muslim Calendar.
Sivan 9, 5690, of the Jewish Calendar.
Khordad 15, 1309, of the Persian Calendar.

The Begum Aga Khan last week arrived in London and jointed the Aga Khan at the Ritz Hotel from Paris.

Lord Hyde returned to London last week from India, where he has been for the last six months.

Lady Brooke-Popham arrived in England from Baghdad last week.

Sir Murdoch Macdonald, M.P., is to have the freedom of Inverness presented to him on June 13.

Lady Eckstein, Mr. Bernard Eckstein, and Miss Herminie Eckstein have cancelled all engagements owing to the seriously critical illness of Sir Frederick Eckstein.

Viscount D'Abernon arrived at 12, Arlington Street on May 27 from Athens and Jerusalem. Viscountess D'Abernon returned to London on June 2.

Sir Percy Loraine and the Hon. Cecil and Mrs. Campbell were among the passengers travelling to Port Said in the Cheshire, which sailed from Marseilles on May 24. They returned to Cairo on May 29.

Sir Arnold T. Wilson lectured to the Royal Geographical Society on June 2 upon Bertram Thomas' "Journey to the Centre of Rub al Khali." We hope to include a report of this meeting in our next issue.

Admiral Sir Frederick Field, having handed over the command of the Mediterranean Fleet to Admiral Sir Ernie Chatfield, struck his flag on the battleship Warspite at Portsmouth at sunset on May 27, and left for London to take up his new post at the Admiralty as First Sea Lord.

The Rt. Rev. Bishop MacInnes, Bishop in Jerusalem, and Mrs. MacInnes sailed for England on May 17 from Alexandria by the Lloyd Triestino s.s. Helouan.

Mr. and Mrs. Oliver Harvey arrived from the British Legation, Athens, last week, at 119A, Mount Street, W.1., which will be their address for a few weeks.

Lady Humphrys, wife of the High Commissioner for Iraq, and Miss Daphne Humphrys arrived at Alexandria on May 16 from Beyrout and sailed the following day by the Messageries Maritimes s.s. Champollion for Marseilles.

Mr. and Mrs. Rudyard Kipling have concluded their two-months' stay in Bermuda, and sailed last week for Montreal in the Lady Somers. They will leave Montreal to-morrow (June 6) in the Duchess of Bedford for Liverpool.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE. Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christ Church, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras, with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

The Hon. Anne Wood, daughter of Lord and Lady Irwin, is on her way back to England. She will stay at 15, Gloucester Place with Lady Worsley for about ten days, after which she will join the Earl and Countess of Iveagh at 11, St. James's Square.

Miss Julia Chatterton, who visited Yugoslavia last year in search of Folk Song, will return to that country this summer. She will leave England on June 7 on a similar quest, travelling by France and Germany to Liubliana, whence she will visit Zagreb, Belgrade, Skoplye, Ochrid, Sarayevo, Kotor, Dubrovnik, Mostar and Split.

Mr. W. Day, Inspector, Roads Service, Cairo Tanzim Administration, and Mrs. Day left Egypt for Athens on May 17 by Imperial Airways liner. Mr. Day, who has resigned from the service of the Egyptian Government, is taking up an appointment with the Macris Trading Company.

Prior to the Court at Buckingham Palace on May 27 the Queen received his Highness the Maharaja of Tripura, Major his Highness the Raja of Tehri Garhwal and her Highness the Rani Kamlendumati, and her Highness Rani Indamati. Lieutenant-Colonel Stewart Patterson, Political Aide-de-Camp to the Secretary of State for India, was in attendance.

In connexion with the meeting held at Viscountess Erleigh's house on May 22 to arrange a Garden Fête at the Royal Botanic Gardens, Regent's Park, for the Women and Children's Welfare Work in Palestine, Lady Erleigh acknowledges the following donations:—Mr. and Mrs. I. M. Sieff, £200; Mr. and Mrs. S. Marks, £150; Mr. and Mrs. H. Sacher, £150; Lord Melchett, £105; Mr. and Mrs. R. B. Solomon, £100; and Mrs. H. Solomon, £100.

THE Y.M.C.A. IN YUGOSLAVIA.

The last issue of the Y.M.C.A. *Yugoslav Bulletin* records that the Yugoslav Government has recently issued a special Order authorising schoolboys to join the Y.M.C.A. and inviting schoolmasters to encourage their scholars to join it. Apart from this exemption schoolboys remain under the prohibition against participating in societies outside their own schools. The Association enjoys the highest patronage in Yugoslavia. Prince Paul is its President, and Princess Olga President of the Women's Section. Both their Royal Highnesses were present at the Second Annual Dinner, held in March, which was attended also by the Minister of Justice, the Assistant Ministers of Foreign Affairs and the Interior, a representative of the Prime Minister, and the British and American Ministers. There are now 25 centres of the Y.M.C.A. in Yugoslavia, with more than 2,000 members in all.

THE WEEK AT HOME

London, Tuesday Morning.

Conservatives' Troubles.

The Conservatives, though they won the Nottingham by-election with ease, have not had an easy time lately, largely owing to internal differences. The dissatisfaction that notoriously existed with the Party's headquarters was made manifest in the resignation a few days ago of Mr. J. C. Davidson—a step that would be followed if those who manage the Party machinery had their way—by the resignation of Mr. Baldwin.

For it is the obvious truth that the Conservatives are not gaining ground in the country—at least in the sense that they are gaining converts from the other parties. Even at Nottingham, where everything, though mainly Mr. Snowden's folly in removing the lace duties, was in favour of them, they scarcely increased their poll at all: their resounding victory was due to very natural Labour and Liberal abstentions.

An example of the problems which are affecting them is provided by this question of Empire Free Trade. It is not questioned now that Lord Beaverbrook has rudely disturbed the slumbers of the Party. But have the leaders finished rubbing their eyes yet? That is the question to which followers of the Party are still seeking an answer. There is a movement in the provinces to force each Conservative candidate to declare himself openly in favour of Empire Free Trade.

More significant still, there is a definite breakaway, on the part of the original Empire Crusaders, from the policy of adopting the Referendum. The official leaders, and notably Mr. Baldwin himself, still adhere to the Referendum, as being the only device which ensures the non-wrecking by subsequent Governments of a vast Imperial experiment. But to those ardent spirits who, having glimpsed a vision, are not content to allow any mundane considerations to stand in the way of its realisation, such a cautious temper is distinctly unpalatable. Such an authority as Lord Melchett, indeed, has gone to the length of calling the device which, for the time being, secured the co-operation of Lord Beaverbrook and Mr. Baldwin, "un-English." And when Mr. Baldwin, of all people, is called "un-English," something indeed must be amiss.

Unemployment.

The real reason, apart from the local reason, for the drop in the Labour vote at Nottingham, was the increase in unemployment, by which, as every one foresaw, the Labour Government would ultimately be judged. It may be true that unemployment is a world phenomenon, and that over world conditions the Labour Government cannot be expected to have an influence; but it is certainly true that the increase of figures among the unemployed is providing a profound shock to the Government's followers. For it is so painfully obvious that the Government, for all the promises held out at election time, have not even yet any really considered plans.

In the debate on the subject last week, when Sir Oswald Mosley made a memorable speech and proved conclusively that he is very far from being the "perfumed popinjay" that some Conservative member politely called him, the Prime Minister appeared to hold out hope of the possibility of a non-partisan approach to the matter. He has already called a conference of local authorities to speed up public works, and the issuing of the terms for an All-Party Conference is in itself a confession that a solution of the problem, which presumably the Labour Party hoped to devise for itself, is beyond the resources of any one Party.

This in itself is considerable advance. It is, indeed, from the Labour Party's own point of view a necessary step, because nothing could more surely drive the country into opposition to Labour than an increase of unemployment.

Arable Land.

From the agricultural situation in England it is difficult indeed to derive much satisfaction, nor is there much in the programme of any political party to which agriculturists can look with considerable hope.

It is particularly interesting, though it is melancholy, to note, while talk of the reclamation of land as a means of providing employment is in the air, that the tendency to convert arable land in Great Britain to pasture or rough grazing is steady. At the present time there are of arable land one million acres fewer than there were in 1914. In 1929 there was a reduction, as compared with 1928, of 160,987 acres.

The whole story (which has just been revealed in the Agricultural Statistics, published by the Ministry of Agriculture) is a pitiable one. The decline in the acreage of arable land has not been marked by an increase in the live-stock population; the number of agricultural workers continues to decrease; wheat and barley continue to shrink —naturally, because their production is largely uneconomic.

There is, however, one bright spot. The subsidised sugar beet industry, which had a severe setback in 1928, fully recovered, and showed an increased acreage. There are now 229,918 acres on which sugar beet is cultivated—a "record" for this country.

But it does seem that politicians are resolved to do little to help a dying industry. The much vaunted Labour plans for the revivification of Agriculture have proved a frost; and Mr. Baldwin's promised declaration of Conservative policy on Agriculture has been curiously postponed until Whit-Monday.

A Newspaper Amalgamation.

Having successfully swallowed the *Westminster Gazette*, the *Daily News* has now engulfed the *Daily Chronicle*, the other remaining Liberal morning paper in London. I do not know who read the *Chronicle*, but its readers were many. Partly through successive changes of proprietorship, and partly through the enormous success of the new *Daily Herald*, the *Chronicle*, which has a most honourable history—in the time of Massingham, at any rate, it really was a force—had in recent weeks been fighting a losing battle.

Whether it stood for things outside the faith of the *News* is doubtful— in which case, the realists presumably would not lament its passing. But one is genuinely sorry for the hundreds of its staff thrown out of work, as it were, almost overnight. Here is an example of "rationalisation" at its cruellest.

Sport in June.

With the advent of June, we ought really to feel ourselves immersed in the high pomps of summer. But the weather so far has been terribly disappointing. May, 1930, will be a month long remembered for its ruthless dampness.

Yet there were good things in it. The Amateur Golf Championship was well fought out, though there could be not the slightest question that Mr. "Bobby" Jones, the greatest golfer of his age, and probably of all time, deserved to become champion; and there have been exciting things in County cricket matches.

Mention of cricket reminds one of the Test Trial, now on at Lords. It will be an amazing thing if the old team which is now representing England is actually picked for the first Test on June 13. It may conceivably be the best at the moment, but nobody seems to think that such "youngsters" as Duleepsinghi or Peebles will not be playing for England between now and the last Test match at the Oval.

The climax of this season of sport is commonly regarded as the Derby, which is being run to-morrow, and which will be won by—but I observe that these lines will be published after the result!

Book Reviews

GREECE TO-DAY.

"AN INTERNATIONAL DRAMA." By Henry Morgenthau. (London: Jarrolds. 18s. net.)

"GREECE TO-DAY: The Aftermath of the Refugee Impact." By Eliot Grinnell Mears. (Stanford University Press, California), London: Humphrey Milford. 5 dollars.

To the reader of these two books on Greece by American authors we recommend the order in which they are given above. The "International Drama" is, of course, Greece's refugee problem, which supplies Mr. Morgenthau with a setting for a recital of his very remarkable activities on Greece's behalf. It is, however, a Drama with this difference, that the chief victim is likely to "live happily ever after"—a point which the second book brings out more clearly than the first. For a more intimate and, it must be admitted, a more accurate knowledge of Greek affairs, including the handling of the refugee problem, the reader will have to turn to Dr. Mears' narrative, and he will be amply rewarded.

Greece cast her spell on Mr. Morgenthau when he was American Ambassador in Constantinople from 1913 until 1915, and how strong the spell was this book of his shows. On his arrival at the Turkish capital of those days he learned to his "astonishment" that the Greeks comprised a considerable percentage of the population of the Turkish Empire; he found some of the Greeks in Constantinople "among the most brilliant and cultivated people I have ever met anywhere in the world." From this point he took Greece and her people under his special charge, and his position in the world of diplomacy-cum-business enabled him to do the Greeks many a good turn, from the doing of which he derived much pleasure and satisfaction. From Mr. Morgenthau's own statement it becomes known that the Chanak episode of 1922 has to be closely identified with his influence on world events. The sequence of incidents was, in his own words, as follows:—

> Thus it came about that a social call from my old friend T. P. O'Connor led to newspaper interviews, that led to conversations with the Prime Minister (Mr. Lloyd George) and Cabinet officers, that somewhat influenced a decision of the British Government, that undoubtedly prevented a fresh Balkan outburst and a possible rekindling of the war in Europe.

In October, 1923, Mr. Morgenthau left New York to take up his duties as Chairman of the Greek Refugee Settlement Commission. His was an excellent appointment; he was a devoted friend of Greece and he had the ear of the international world of finance. As he quickly discovered, the crux of the refugee problem was finance, and Mr. Morgenthau set about at once to settle it. Ably assisted by his colleagues and subordinates, who took upon themselves the details of refugee work, the Chairman of the Commission was left free to raise the necessary funds, and in this matter the Governor of the Bank of England became as malleable in his able hands as Mr. Lloyd George had been, when it was a question of military strategy. Mr. Morgenthau seems never to have known what failure means. A single Press interview on his arrival in Athens sufficed to swing the whole nation round from the depths of despair to an all-conquering optimism. "My optimism," he writes, "seemed to infect them (the journalists). . . . The effect on the whole Greek people was instantaneous," and from that point, as we know, the refugee problem never looked back. Mr. Morgenthau could also impress the Greeks in other ways. He announced that he would waive the salary of £2,500 associated with the Chairmanship of the Commission, and would also pay all his own travelling and other expenses.

In the intervals of devoting himself to the financial side of the refugee question Mr. Morgenthau appears to have been a powerful puller of strings in Greek politics. With a strong anti-monarchical bias and greatly impressed by M. Venizelos, he had no difficulty in throwing himself whole-heartedly into the Republican cause, and when he found the more extreme Republicans hesitating to terminate the Monarchy—partly because they could not persuade M. Venizelos to the wisdom of the step, and partly because they feared that the British Government might disapprove of the action—Mr. Morgenthau came forward as *deus ex machina* by producing a reply to a telegram of his to the Governor of the Bank of England assuring the Republicans of "sympathy" in Great Britain. Following up this telegram with a public speech on the occasion of his receiving the Honorary Citizenship of Athens, which "was like a bombshell," and "the Mayor thought it was a very courageous speech and would help their decision in favour of a republic," Mr. Morgenthau finally had the satisfaction of seeing Greece act upon his advice and proclaim a Republic. He had at the outset secured Greece an advance of a million pounds towards the cost of settling her refugees; he was equally successful in securing a second million, and finally the big Greek Refugee Loan was authorised. Mr. Morgenthau considered that his work in Greece was done and that he could better serve the Greek cause by persuading his fellow-countrymen to support the loan. They did.

Mr. Morgenthau's book is unfortunately marred by a large number of spelling mistakes and misprints. General Kondylis does not spell his name with a "G"; the Greek for "Long live" is *Zito*, not *Cito*. We are informed that "Cafandaris was slated to succeed Venizelos as Premier." It is not correct to say (p. 168) that "the *Salamis* had been completed by the Germans during the War, used in their navy, and scrapped under the peace treaty," for until recently the *Salamis* was practically in the same condition as when she was launched in 1914.

Those who desire a more balanced appraisement of Greece, her people and her affairs, may turn from Mr. Morgenthau's enthusiastic raptures to Dr. Mears' scholarly and exhaustive work, written with a friendly pen, though inspired by a more critical mind, although it too suffers from various slips of pen or memory. Mr. Morgenthau found that "the Greek has a passion for excellence," but does not mention his aptitude for concealing it behind a shrug of the shoulders and "*then peirazei.*" (*Anglice:* Never mind. Let it slide.) He also notes that "education is a passion universal among the Greeks," and in general leaves the reader with the impression of being in the presence of a race of supermen, albeit concerned—rightly in Mr. Morgenthau's opinion—over the wicked tendencies of their neighbours. With the responsibility of the Chanak episode on his conscience, Mr. Morgenthau could hardly pose as an angel of peace in the Balkans, so he encourages the Greeks to be on their guard. Possibly they will find Dr. Mears a safer guide in this respect, as the non-Greek will find him in regard to Greek affairs generally. "Greece To-day" enables the reader of "An International Drama" to adjust his perspective in many directions. Dr. Mears also bears witness to the passion for education, but points out that "the masses of Greece remain unable to read and write."

> This high percentage of illiteracy is a great drawback to the material and intellectual development of the country. As long as people have not the rudiments of education, they must be dependent upon others for their thinking. How can the ravages of malaria and tuberculosis ever be greatly allayed as long as people continue to believe that a little hocus-pocus, or a clove popping in a candle-flame is more efficacious than a doctor's prescription in lifting the

SINHALESE SELF-TAUGHT
By Don M. de Zilva WICKREMASINGHE, M.A.
Epigraphist to the Ceylon Government.

"evil eye," or that by fastening a shred of one's garment to a column in the Church of St. John one's fever will disappear beneath the column? How can public opinion conducive to international comity be built up so long as the only things one knows about his Bulgarian and Serbian neighbours are the judgments of an ignorant, though patriotic, village spokesman?

Again Dr. Mears is able to show that, however harrowing an experience for the victims themselves the refugee problem has proved, or is proving, a blessing in disguise for Greece. Whether he is right in his refugee statistics is another matter. In his Preface he states that eighty-five per cent. of the refugees were women and children, and on p. 278 that women and girls numbered at least two-thirds of the total number. The Greek census of May, 1928, gave the total number of refugees as 1,221,849, of whom 589,418 were male and 632,431 female. Of the males 414,562 were over ten years of age. Fuller statistics may confirm Dr. Mears' point, for throughout the book there are no signs of anything but the most painstaking research. Indeed, the reader is left wondering how Dr. Mears, who would seemed to have gained all his knowledge of Greece during a limited tenure of the post of Resident Trade Commissioner in the country, has contrived to get to the bottom of things. His book is a mine of information, and is the more valuable because it reflects the candid judgment of the friendly critic. So many authors adopt rose-coloured spectacles, with the result that the people about whom they write receive further encouragement in believing that all round them is perfect and calls for nothing to be changed, still less to be improved. Dr. Mears realises that the great overshadowing issues in Greece to-day are economic problems, compared with which matters of history and politics are fading away in the background, and it would be no exaggeration to say that, if all Greek politicians to-day were to read, mark, learn and act upon many of the recommendations of "Greece To-day," the country would find the prosperity surely awaiting it based on a solid and lasting foundation.

As an indication of the wide range of Dr. Mears' survey of Greek affairs, an inadequate reference to his book may close with a few *obiter dicta:*

Suppose that the crops now raised for export were displaced by wheat for home consumption. Would Greece be richer in the long run? It seems very doubtful. . . . The desire of the Government to make Greece self-sufficient is in accordance with the theory of mercantilism and is also a holdover of war hysteria.

It is, of course, these artificially high prices which customers must pay for Greek currants which enable Australian currants to compete with them. . . . Should this procedure continue, Greece may eventually find her entire currant crop on her hands, instead of about half of it as at present.

The chief deficiency in a commercial way in the make-up of the average Greek business man is his lack of a constructive long-time point of view.

Greece can do herself no greater service than to abolish the spoils system and substitute civil appointment by merit and competitive examination.

A reorganisation of the system of taxation appears essential, since the poor are having to bear too large a share of the taxes. Revenue is collected from incomes as low as 55 dollars a year, while there are many loopholes by which large incomes may escape a rightful proportion of the tax.

As the business men of the Greek Republic assume a greater measure of control over public and private affairs—an inevitable evolution—they will put into practice constructive policies leading to stabilisation and peace, if for no other reason than to instil a new confidence among bankers and chancelleries of Western Europe and America.

The brother of Amanulla Khan, Inayatullah Khan, whose short-lived reign ended with his exile early last year, arrived at the end of last week in Constantinople with his family from Beyrout, where he had been living since he left Afghanistan.

M. Venizelos, Greek Prime Minister, attended a celebration of the centenary of Greek Independence on May 29 at the Convent of St. Lavra, in Athens, which possesses the first flag of the Greek insurgents.

The *locum tenens* of the Armenian Patriarchate, the representative of the Orthodox Patriarch, and the Bishop of Tokyo took part in the memorial service for the late Archbishop Lord Davidson in St. George's Cathedral, Jerusalem, which was attended by the leading Prelates of the Oriental Churches in Palestine.

PALESTINE IMMIGRATION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your comments in your issue of May 21, on the suspension of Jewish immigration to Palestine, you state that "it is desirable that further arrivals of Jewish immigrants should be restricted pending the receipt of Sir John Hope Simpson's report." You give no reason why such a step is "desirable" except to say that it is "clear," which does not help one very much.

The fact is that the Palestine Administration had approved of the issue of the 2,300 certificates (in addition to 950 granted last February) after satisfying itself, by a rigorous examination of the labour programme of the Jewish Agency for the six months ending with September, that they were necessary on economic grounds. The motive that prompted the Government, in ordering the suspension of these certificates could not, therefore, have been of an economic nature. It was clearly a political motive, due to the demands of the Palestinian Arab Delegation.

According to Article 6 of the Mandate, the Palestine Administration is required to facilitate Jewish immigration under suitable conditions. To suspend Jewish immigration and especially immigration officially admitted to be economically necessary, is a flagrant breach of the Mandate.—I am, etc.,

ISRAEL COHEN.

May 30. The Zionist Organisation,
77, Great Russell Street, W.C.1.

[It is difficult for the onlooker to understand the extreme heat engendered over this question of immigration. In the normal routine of Palestine administration an estimate is formed of Jewish labour requirements for a six-monthly period, subject to confirmation by the Palestine Government's officials. The issue of the necessary permits is then authorised by the High Commissioner. As far as can be gathered, what has happened is that during the process of drawing up and confirming the estimate of Jewish labour requirements, and before the actual issue of the permits, Sir John Hope Simpson was appointed—naturally over the heads of all those who had previously dealt with the subject of immigration—to carry out a special inquiry into the matter, and the British Government adopted the perfectly normal course of recommending the Palestine Government to suspend the issue of the actual permits pending the issue of his report.

To have settled the immigration question for the next six months, while Sir John Hope Simpson was carrying out his investigations would have been an anomalous proceeding. On the other hand, it can quite well be imagined that, if the Zionist representatives in Palestine and London had avoided imputations of "political motives" (*sic*) and the charge of "a flagrant breach," and had approached the Governments with a reasoned case showing the necessity for meeting labour requirements for, say, the earlier part of the six-monthly period, the whole matter would have been satisfactorily adjusted.—ED.]

Shukry Kaya Bey, Turkish Minister of the Interior, opened the eighth annual Congress of the International Touring Alliance on May 31 in the former Throne Room of the Dolma Baghche Palace at Istanbul.

M. Charles Rist, the French financial expert who has been engaged by the Turkish Government to make a thorough examination of Turkish finances, arrived at Istanbul on May 30 on his way to Angora.

It was officially announced in Palestine on May 31 that the High Commissioner had commuted all except four of the twenty-six death sentences, passed on men convicted of murder committed during the August riots, to imprisonment for life. Urfali, the only Jew condemned to death, is applying for special leave to appeal to the Privy Council.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Honours List.

In the Birthday Honours this year the list of the higher awards is comparatively short this time, but it contains some interesting appointments, notably the K.C.M.G. conferred on Colonel Frederick Palmer, while another notable award is the Knighthood given to Mr. W. T. Layton, the economist.

Anglo-Persian Oil.

It was fully anticipated that the Anglo-Persian Oil Company, like the other chief oil concerns, would show greatly improved results, and the preliminary statement issued last week showed that these expectations were fully justified. The profits amounted to the record total of £5,206,762 as against £2,833,000, which was for a period of only nine months, and making allowance for a full year as regards the latter total the increase is nearly a million and a half. A final dividend of 15 per cent. is proposed, making the distribution for the year 20 per cent. as compared with 12½ per cent. for the nine months ended December 31, 1928. These extremely satisfactory results have been obtained, it must be emphasised, in a period of considerable difficulty for the oil industry, and that fact indicates that a marked expansion of profits may be looked for as conditions gradually became more favourable.

Kassala Cotton.

At the meeting of the Kassala Cotton Company, the Chairman, the Hon. A. M. Asquith, was able to give a most satisfactory survey of the position of the company. It is a very serious undertaking for a company to have to change its sphere of operations from one area to another, entailing as it does a further period of development work. The efforts put forward by all concerned have greatly shortened this period on the Gezira concession, and instead of only 5,000 feddans being planted with cotton last year as was anticipated over 15,000 were put under the crop, and in a difficult year, Mr. Asquith pointed out, the company has been fortunate in obtaining a very good yield. A few small sales have been effected at satisfactory prices, but the marketing of the bulk of the crop has still to be done. The total area of the company's concession is now over 60,000 feddans, and satisfactory progress has been made with the development work in the extension, and it is hoped to plant 20,000 feddans in cotton this autumn. The average yield per feddan this season of 4.36 kantars – a yield which, it is stated, would have been exceeded in favourable circumstances—points to the excellent character of the concession area, and given reasonable prices for cotton it is clear that the company can now look forward to a satisfactory future.

Sudan Plantations.

That the Kassala Cotton Company have been exceptionally fortunate in obtaining such a yield per feddan will be clear from the much smaller yield per feddan obtained by the Sudan Plantations Syndicate. At the last annual meeting of the company it was pointed out that the extraordinary heavy rains experienced during the planting season in the Gezira had made it necessary to resow the the cotton repeatedly. In a circular which has just been issued giving the results to date, it is pointed out that exceptional climatic conditions have been a feature of the past season. It was hoped, it is remarked, that with a normal winter the plants would develop sufficiently to give a good average crop, but, instead of normal winter conditions in December and January, when the flowers and bolls were forming, phenomenally cold weather was experienced, with the result that the crop is below the average. The rainfall in the south and centre of the concession area was the heaviest ever recorded, amounting in two months to about 30 inches. On several occasions as much as 4 inches fell in 24 hours at near intervals, with the result that the whole of these areas was flooded. The western and northern areas did not suffer to anything like the same extent. To judge from past records, such a rainfall should be of extremely rare occurrence, but the Sudan Government are designing a system of drainage for the whole of the Gezira, and are at the moment well advanced with the construction of drains in the southern and central areas which should deal with both normal and abnormal rains. The picking of the crop is now practically completed and the yield amounts to 2.11 kantars per feddan, as against 3.45 kantars last year year, or a total of 335,505 kantars, as against 466,168 kantars last year. Last year's cotton stocks have been entirely disposed of at prices exceeding the balance-sheet valuation, and a start has been made with the selling of the new crop at prices which are satisfactory, although lower than those of last year. It is satisfactory to learn that the heavy rains of the past season have not interfered with the preparation of the land for the coming season's crop, nor with the programme of extension of the company's areas in the north.

Assembly last week after being approved by the Council of Ministers, are now available. The bank is to be known as the Central Republican Bank, and will have the exclusive right of issuing bank notes for a period of 50 years —a period which may be extended five years before its expiration. The objects of the bank will be to further the economic developments of the country, and to follow the exchange movements and regulate the money market. The head office of the bank will be at Ankara, and it will have the right to establish branches in other centres with the approval of the Finance Minister. Concurrently with its establishment measures will be taken to stabilise the exchange. The rate will be fixed on a gold basis, and gold will be deposited at the bank as a guarantee for the note circulation. For the first part of this deposit the Government is to place at the disposal of the bank an amount of exchange. Further, the Treasury will pay to the bank each year one per cent. of the Budget revenues which will go to increase the guarantee fund, and it will be open to the Government to allocate other revenues to the same end. All the funds in gold possessed by the Government, the municipal administrations and other official bodies will be remitted to the bank in the course of the first quarter after its establishment to enable it to take the necessary measures for the stabilisation of the currency. The new bank notes which will be issued will have a gold value fixed by a special law, and will be exchangeable against gold on demand. Further funds will be provided for the bank from the net profits of companies formed with State capital and from municipalities, etc., whose Budget exceeds £E50,000.

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 3.

The Stock Exchange has had another dull and idle week, and there seems to be little probability of any conspicuous change at present. There is, of course, plenty of money about available for investment, but until some tangible signs appear of a turn in the long lane of trade depression the public are not likely to incline towards speculative buying. Before such a movement can set in in the industrial share markets investors naturally want to feel assured that share quotations have been adjusted in reasonable relation to current earning power, and on that point there are wide differences of opinion. Those who wish to invest in industrials at the moment should confine their attention either to old-established concerns with good and steady records and strong reserves, or else to concerns of which they may have personal knowledge. Nevertheless, it is well to remember that there is a tendency in some quarters to paint the industrial situation blacker than it really is. In view of the prevalence of pessimism it will doubtless surprise most people to find that the Board of Trade's index of British production for the March quarter was actually higher than that for the corresponding period of 1929.

The expectation that Bank rate would be reduced last Thursday, which caused a passing improvement in gilt-edged stocks on Wednesday, was not shared in the best-informed quarters. There is little sign of real improvement in the Paris Exchange or of a replenishment of the Bank's gold stocks, and until such developments occur or appear likely to occur, a downward move is improbable.

Stock Exchange Reform.

Considerable discussion has been stimulated by a series of articles appearing during the week in a financial daily severely criticising the present administration, methods, and costs of the Stock Exchange, and suggesting certain ways in which reforms could be introduced to the benefit of all concerned. While the investor is directly or indirectly interested in all questions of Stock Exchange management and practice, several of the points raised are of too technical a nature for adequate discussion here, but one question—that of charges—touches the investor very closely. The writer showed that a wide margin exists between costs in London and other financial centres. In part this is attributable to higher taxation here, but commissions, etc., on shares of 15s. to 30s. are shown to amount to between 0.83 per cent. and 1.67 per cent., and on shares of 1s. to 2s. to between 4.17 per cent. and 2.1 per cent., compared with 0.25 per cent. to 0.125 per cent. on 100 dollars to 200 dollars in New York. This is clearly the crucial point, since the object of all organisation is to give the best service at the smallest charge. It is argued that the high level is due mainly to two causes: an excessive number of members, and the "split" commission system, or the paying over of a half commission to various persons and institutions introducing business. In so far as the services rendered are inadequate for the half commission received, this payment is wasteful, and, since it reduces the amount left for the broker to meet his charges and make his profit, tends to maintain costs. Reduction of costs would automatically eliminate many of the superfluous members, but it is certainly in the public interest that free competition between brokers should not be interfered with. Another point, the importance of which numerous inquiries from readers emphasise, is the question of publicity. The Stock Exchange rigorously prohibits advertising by members. This, on the one hand, makes investment more difficult for the uninitiated, and, on the other, helps to perpetuate the wasteful half commission system. Whether criticism can stir such an ultra-conservative body as the Stock Exchange to action remains to be seen, but the importance of these questions, not only to investors but also to all public companies, calls for their being given serious consideration.

Tobacco Companies.

The prosperity of tobacco manufacturers and blenders continues unabated as far as the larger firms are concerned. The fact that no additional tax was imposed on tobacco which already yields £58 million per annum to the national revenue—was no doubt one of the agreeable aspects of the last Budget for tobacco shareholders as well as for smokers. But even if a small additional tax had been imposed one may well think that the income of tobacco companies would not have seriously diminished, because tobacco smoking is such a regular habit that economic forces have to be very powerful before it is severely affected. Another important factor contributing to tobacco profits is the growth of the market by the mere fact of women taking to smoking, and this "market" is expanding. The recently declared interim dividend of 15 per cent. tax free by Carreras, the same as last year's interim, confirms the optimistic view of the industry, and it may be expected that the total dividend of 50 per cent. will also be repeated. The growth and progress of this company is indicated by a comparison of its profit of last year with that of five years ago, the amounts being £1,316,945 and £480,584 respectively. By bonus issues and capitalisation of reserves the capital in the same period has grown from £240,000 to £1,406,250. Carreras "B" ordinary shares now yield about £6 7s. per cent. The largest British company is Imperial Tobacco, whose profits have increased without a break for the last eight years, and whose ordinary shares return £5 19s. per cent.

New Form of Security.

A new form of investment is brought to the notice of the general public in the prospectus announcing the issue of £210,000 Terminable Debentures by the Southern Stockholders Investment Trust, Ltd. Similar debentures have been issued before by professional institutions which have obtained loan capital from members, but have not so far received wider attention. The present issue offers debentures redeemable at any date between three and twelve years from the time of application, the date being chosen by the investor. The company, however, would prefer the latter to select one of the half-yearly interest dates—March 15 or September 15. Interest is to be fixed by the company at the time of issue, and on this occasion is 5¼ per cent. A valuable additional novelty in the issue is that if the registered holder dies, his legal representative can secure repayment at par plus accrued interest upon three months' notice, whatever the term of the debenture. This type of debenture should prove attractive to investors who want to have an assured sum available at a given date, say, upon their retirement from business, or to meet school and University fees of their children, while the provision for immediate redeemability on their death permits of the money becoming available when it is very likely that ready cash will be wanted. On the other hand, it is inevitable that only a narrow market should exist in such debentures, on account of the varying maturities.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Ventilating Sets.—The Main Drainage Department, Ministry of Public Works, invites tenders for the supply of three portable ventilating sets capable of extracting 130 cubic metres of free air per minute. June 21. (D.O.T.)

Pumping Stations.—The Mechanical and Electrical Department of the Egyptian Ministry of Public Works invites tenders for the supply and erection of 15 electric pumping stations complete with pumps, motors, switchgears, and pump houses, etc., at the Isolated Basins between Esna and Aswan. August 17. (D.O.T.)

Sewage Ejectors, etc.—The Director-General, Main Drainage Department, No. 2, Sharia el Maleka Nazli, Cairo, invites tenders for the supply of two pneumatic sewage ejectors and accessories for El Arish and Mankabad E.A. barracks drainage. August 24.

Cooling Tower.—The Ministry of the Interior invites tenders for the supply and erection of a cooling tower serving the electric power station at Assiout. The contract includes the construction of a well and basin in reinforced concrete, electrically driven and centrifugal pumps, electric motors, switchgear, etc. July 26. (D.O.T.)

TURKEY.

Machine Tools.—The Administration Générale des chemin de fer et Ports de l'Etat invites tenders for the supply of machine tools, including 2 high-speed lathes (height of centres 200 mm. and 350 mm. respectively), a drilling machine (maximum dia. 32 mm.), a planing machine (maximum travel 500 mm.), a grinding machine, Smith's furnace, anvil, shears for cutting plates, etc., also an air compressor and accessories. June 23. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Manchester, July 5; Birkenhead, July 11). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Birkenhead, June 12); s.s. Matra for Calcutta (Birkenhead, June 11).

Bibby Line.—S.s. Leicestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 11).

British India Line.—S.s. Matiana for Port Sudan, Aden, and East African ports (London, June 6); s.s. Mantola for Colombo, Madras, and Calcutta (London, June 14); s.s. Trekieve for Bombay (London, June 21).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, June 11; Liverpool and Swansea, June 13); s.s. Bothnia for Casablanca, Gibraltar, Melilla, Genoa, Leghorn, Naples, Messina, Bari, Gruz, Venice, Trieste, and Fiume, also at Palermo, Catania, Corfu, and Ancona if sufficient inducement (Liverpool, June 14; Swansea, June 17).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 24); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17).

P. and O. Line.—S.s. Padua for Calcutta (London, June 6); s.s. Malwa for Bombay (London, June 6); s.s. Bhutan for Calcutta (London, June 20); s.s. Rawalpindi for Bombay (London, June 20).

Prince Line.—S.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, June 11); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, June 21).

Ellerman and Papayanni Lines.—S.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 24; Swansea, June 20); s.s. Manchurian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 5; Swansea*, July 5); s.s. Kelso for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 5); s.s. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, July 5; Swansea, July 10); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 18); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 26; Swansea*, July 26). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Theophile Gautier for Alexandria, Jaffa, and Beyrout (June 10); s.s. Angkor for Piræus, Istanbul, Izmir, Larnaca, and Beyrout (June 17); s.s. Mariette Pacha for Alexandria, Jaffa, and Beyrout (June 17).

EMPIRE COTTON PRODUCTION.

Lord Derby presided on May 29 at the twenty-fifth annual general meeting of the British Cotton Growing Association held at the offices of the Association, in Manchester.

In the course of his speech Lord Derby reviewed developments during the past year and referred to the demand that is now experienced for Empire cotton. He said :—You will see by the annual report of the Punjab Company that during the past year the 289F variety has proved its superiority over all other varieties on practically all farms in virtue of the premium offered for this quality coupled with its relative yielding capacity. You will recall, of course, that the major crops on the farm are cotton and wheat. The cotton yields on the farm are generally from 50 to 100 per cent. higher than average yields on local farms and wheat yields are from 30 to 50 per cent. higher. These higher yields are attributed largely to selected and pure seed, and also to the improved methods of cultivation. There was a considerable drop during the years 1926, 1927, and 1928. During the 1928 season a careful examination of the cotton plant by the company's expert staff from the time of sowing revealed the fact that during the months of June and July the crop was infested with a very small insect pest commonly known as "White Fly," whose eggs are laid in thousands on the underside of the cotton leaf. An entomologist was recently deputed to study the pest at Khanewal, and he has already made some useful observations on its life history. In addition to the farm at Khanewal, there are a number of other farms and factories controlled by the B.C.G.A. (Punjab), Ltd., as you will see by the report; in fact, the total area controlled by the Association in India is now about 70,000 acres. I might add that Lord Stanley was very pleased to visit the Punjab this past winter, and I know he was very pleased and much interested in everything he saw.

Progress in the Sudan.

I now come to the Sudan, where again I have to chronicle further progress and another record of splendid achievement. The total production of cotton during the year in the Sudan constituted a record and amounted to 148,000 bales of irrigated Sakellaridis, 13,000 bales of irrigated American, and 9,000 bales of rain-grown American, being the equivalent of about 170,000 bales of 400 lb. each. The areas under cotton in the Gezira controlled by our friends the Sudan Plantations Syndicate, Ltd., were 131,351 feddans, as compared with 105,587 feddans in the previous season. Moreover, the yield was slightly better. The cotton crop in the 1928-29 season amounted to about 108,287 bales, as compared with 77,665 bales for the previous season. The cotton was of very good quality, both in grade and staple, and was highly approved by spinners of fine Sakellaridis. The increase is, course, accounted for by the fact that for that season the decision by the Government to enlarge the Gezira Main Canal made it possible to consider the immediate development of areas to the north of the Syndicate's existing concession area. The proposed extension will consist of an area of about 100,000 feddans. Development and canalisation work has been started, and it is hoped to complete before July, 1930, the development of about 40,000 feddans, which will add during the 1930-31 season a further 13,000 feddans to the present area under cotton, which is over 158,000 feddans.

You will recall that the Kassala Cotton Company transferred its activities to a block of land, where on the new concession in the Gezira approximately 15,500 feddans were planted with cotton during last autumn and the crop has promised well. Another area is the Gash Delta (the management of which has now reverted to the Government) where the area cultivated with cotton was 28,537 feddans, and the yield about 17,500 bales, which compares with 16,500 bales from approximately 25,800 feddans for the previous season. The third principal area for irrigated cotton is Tokar in the Red Sea Province, where there was a crop of about 11,500 bales.

In the Southern Provinces of the Sudan the authorities have now had several years' experience in the growing of cotton and they have decided to concentrate their efforts for the time being on those areas which have shown the most promise. The rainfall during the past season was good. Broadly the output has risen from 400 bales in 1925 to an estimated crop of 6,000 bales in 1929. This may be considered fair progress and marks some economic advance in these areas, hitherto unproductive so far as a money crop is concerned.

With regard to Iraq, earlier on we expected a crop of 10,000 bales, as the area planted showed an increase of at least fifty per cent. on the previous year, but at the time the cotton was planted and for the first two months of its growth the country was invaded by locusts, with the result that the crop shows a decrease on the previous season's crop—that is, 4,600 bales, against 5,200 bales in 1928.

In addition to these principal Empire cotton-producing areas, Sierra Leone, the Gold Coast, Kenya, the Fiji Islands, and Cyprus are adding their quota to the world's supply. Despite the setbacks in certain countries I am privileged to say that I have seen realised as I am approaching my twenty-first year as President of this Association, the highest figure of the production of Empire grown cotton that has so far been obtained. The estimated amount of cotton grown within the British Empire, not including improved types grown in India, has increased to 472,500 bales, which is the largest quantity so far produced, and an increase of 112,950 bales upon the figures of 1928.

Growing Demand for Empire Cotton.

There are now ample supplies of Empire and other outside growths of cotton, and with the deterioration of the quality of the American crop, these cottons are becoming more popular amongst spinners. The cotton trade is gradually coming to realise the importance of Empire and outside growths of cotton, and the increase in production is already having an effect upon the price for American

and Egyptian, and, given normal trade conditions, there is no doubt that spinners will use them more extensively in the future. The Sudan Sakel, East African, and West African cottons have now built up a deservedly high reputation; they are produced in commercial quantities, and spinners may be assured of large and regular supplies, whilst for special yarns there is the Sea Island variety grown in the West Indies and Fiji and some of the finer qualities of Sudan Sakel. Prices are now considerably lower than they were last year, and I wish we could all hope that the cheapness of the raw material could to some extent stimulate the manufacturing side of the trade. We watch with every interest the efforts that are going on in regard to mill and marketing reorganisation, and hope that the movements aiming at increased competitive power will materialise. The question of more scientific control of production by amalgamations which will tend to eliminate losses, and the investigation of new uses for cotton goods, are important steps in the right direction. In maintaining supplies of raw cotton from British Possessions both the Association and the Empire Cotton Growing Corporation have to watch the changes that take place and to move with the times—particularly the latter body, which looks after the establishment and provision of experts so that the native growers may proceed along scientific lines.

Now as regards the present season, I am told that we may expect to receive a check in the production figures, principally on account of adverse climatic conditions in Africa. Of course, as I have said before, temporary set-backs caused through climatic and economic conditions, insect pests, etc., will occasionally arise and cannot be avoided. With such uncertainties I will not attempt to make any forecast, but I am afraid the production figures will certainly be less than for 1929. It is gratifying to see that transport facilities are being improved, particularly in Eastern Africa, and in regard to ginning and baling facilities, these are ample to deal with the crop in an expeditious manner.

I cannot conclude my remarks without expressing our sincere gratitude for the splendid work performed by the Association's staff both at home and abroad, by whom we are so admirably served, and to whom we are very much indebted. There are others, too, who have rendered us assistance—I refer particularly to the officials of the Colonial Office and the other public departments of State; then there are the officials of the local Governments in the various Colonies and Protectorates, where we are operating, whose co-operation is especially appreciated. Then I must not forget the Press, whose assistance when it comes to stimulating public opinion so that everyone will realise the advantages of this Imperial movement is most welcome.

Combined Power and Steam Heating Plants.

In any establishment using both power and low pressure "boiling" and heating steam, it is possible to generate electricity at an extremely low cost, far below that of the usual arrangement of separate condensing engines or turbines, and live steam used for process work, taken direct from the boilers. The most efficient and scientific practice under these circumstances is to generate the steam at a high pressure and use a back-pressure or pass-out engine or turbine of the correct type for the conditions, so that the steam, after developing power, is exhausted at any desired low pressure and used for the process work. By this means the heat in the exhaust steam—which usually corresponds to about 60 per cent. of the total heat in the coal fired under the boilers—is usefully employed instead of being wasted in the cooling water, as with condensing steam units, engines, or turbines. For example, the thermal efficiency of the large compound engine, so largely used in driving mills and factories, is 12-15 per cent., whilst that of most steam-driven electricity stations is only 15-18 per cent. from the raw coal to the switchboard. With a combined steam, power and heating plant, however, as already indicated, the heat normally lost in the condenser is all usefully employed in heating water or other process work, so that the thermal efficiency is 50-65 per cent., or about four times that obtained by an ordinary condensing engine.

In this connexion some striking work is being carried out by Belliss and Morcom, Ltd., of Birmingham, one of the chief pioneers in this field, who manufacture both back pressure and pass-out turbines and engines. Over 1,450 of their installations are running on this particular system in about 70 different industries, being a total of about 300,000 h.p., which represents an experience extending over 30 years covering almost every possible condition of process steam and power operation. The detailed results of such plant are available and the actual saving depends upon the relative amounts of process steam and power required. However, with any more than 50 per cent. process steam, certainly over 40 per cent. of the coal bill can be saved as compared with the use of live steam for process work and condensing engines and turbines, and the principle is particularly valuable because it is equally applicable to the small and large establishment.

India's wheat crop this year is expected to amount to 10,530,000 metric tons, or 1,900,000 metric tons more than in 1929.

The Directors of the Imperial Bank of Persia propose paying a final dividend of 7s. per share, plus a special bonus of 2s. per share, both free of tax, for the year ended March 20.

The Bank of England announce the numbers of 693 Four per Cent. Egyptian Government Irrigation Trust Certificates, drawn for redemption on July 1 next.

After considering the accounts for the year 1929 the committee of the Ottoman Bank has decided to propose to the general meeting, convened for June 24, the distribution of 5s. per share, the same as last year. In Paris this dividend will be paid without deduction of taxes.

The report of the Egyptian Delta Land and Investment Company for 1929 states that Meadi continues steadily to increase in size and attractiveness. The township comprises a total of 181 villas and houses, of which 58 are owned by the company. The profit was £E14,337, as against £E18,530. This apparent difference in favour of the previous year is due to the exceptional profit, amounting to £E3,070, from the disposal of part of the holding in Egyptian Unified stock. Apart from this item, the profits are slightly higher. Contracts were signed for the sale of 22,675 square metres of building plots at Meadi at a total price of £E12,815, representing an average price of PT56½ per square metre. Part of these sales were for cash and the remainder upon the usual conditions of easy payment. One Boulac plot of 452 square metres and a Helwan plot of 853 square metres were also disposed of. The dividend is 1s. per share, £E10,112 being carried forward, as against £E12,021.

Near East Markets

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended May 24:—

Grain.—Last week's improvement in maize was followed by a steady fall in prices during the best part of the week which, however, is again closing with a better tendency. These frequent fluctuations are hardly affecting our market as owing to the reduced quantities of available grain, due to heavy rains having made the transport of grain to shipping centres difficult, it is almost impossible to combine business. The freight market continued extremely weak and spot steamers could hardly make any progress. Rates varied between 9s. 6d. and 10s. 6d. according to destination and degree of necessity of the respective steamers. Two more steamers have been fixed at 13s. 6d. basis Continent prompt loading and a further steamer at 6d. more middle June loading. There is no change in the situation at Constantza.

Timber.—It is reported that about 150 wagons have been booked for three ports North Africa at £7 15s., and that a few small parcels have been placed for Sicily and Naples at £7. Other destinations are neglected and freights unchanged.

Weather and crops.—Cool, rainy weather prevailed throughout the country during the greater part of the week, but the last two days have been fine and warmer. In some districts the rain was at times torrential, and floods have caused considerable damage to the permanent ways and roads. A recent Government report states that the crops in all parts continued to be in a very good condition notwithstanding some damage by inundations and hail in certain districts and a few cases of rust.

Sulina.—Bar depth 24 feet. River minimum depth 24 feet. In spite of the quantity of silt brought down by the rising river due to the recent heavy rains, the bar depth has been maintained at 24 feet, passage 3 feet. According to the latest soundings there were no indications of a further bank being formed in the channel, but the position is being watched closely.

Constantza. This week about 2,800 tons of grain arrived and clearances amounted to about 3,000 tons to Rotterdam and 2,100 tons to Mediterranean ports. Fifteen vessels loaded over 60,000 tons petroleum products and three took oil fuel for bunkers.

Bulgarian Report.

Bourgas. May 17.—The market is quiet and only a restricted amount of business has been effected. Heavy rain showers were experienced practically every day during the week. It is to be hoped that a spell of fine weather will set in as there are already complaints that the excess of moisture was beginning to endanger the crops. In several places locusts have made their appearance, but measures have been taken by the authorities to cope with this evil.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended April 30:—

Arrivals in Kordofan stations and Tendelti amounted during April to 2,327 tons, which indicates continued improvement. The Kordofan arrivals to-date are the same in total as last year, but the arrivals this year definitely increased from the beginning of March, whereas last year arrivals fell off from February. The promise of the Kordofan gum crop is therefore better now than last year at the same time.

Prices at El Obeid.—There has been no definite tendency to rise or fall throughout the month, but repeated endeavours have been made to maintain prices and to keep up the value of high-priced stocks, whilst others with an eye to the high prices of last year bought spasmodically and helped that policy. Comparison of the closing prices at El Obeid show that on April 1 prices were up 6d. as against March 31. On the 2nd they were down 6d. From the 3rd to the 7th they were up 1s. 2d., 8th up 11d., 9th down 2s. 1d., 10th up 1s. 2d., 12th down 1s. 2d., 13th up 1s. 2d., 14th stationary, 15th up 11d., 16th down 11d., 17th stationary, 19th up 6d. From the 22nd to 24th prices fell 2s. 10d., from 26th to 28th rose 2s. 7d., from 29th to 30th they fell 2s. 1d. The net fall during the month was 3s. per cwt.

Demand has been irregular except from the U.S.A., where it has been pretty constant except towards the end of the month. If endeavours have been made to keep up local prices, c.i.f. prices have been characterised by repeated cutting to sell. It is only in the East that such a paradoxical situation would arise. It has been noticeable that on falling prices demand increased and on rising prices demand slowed down—just the reverse to what usually happened when prices were on the lower levels of former years. If the present weather continues the arrivals are likely to be good in May, but there is no record of a season in which May was not the latest high point of production.

Talha prices declined 2s. on the Khartoum market.

The Messageries Maritimes, as in former years, have specially arranged for an uniformed courier to travel from London to the French port on the days prior to the departures of their Egypt, Mediterranean, and East African steamers during September, October, and November. This courier will proceed by the 11.15 a.m. service via Dover as far as Calais until October 25, and by the 2 p.m. service via Folkestone to Boulogne (which will be routed via Laon and Is-sur-Tille instead of via Paris) for the remainder of October and November, so as to be in a position to render any assistance to passengers proceeding to Marseilles to join the Messageries Maritimes' steamers.

Motors and Motoring.

(By Our Motoring Correspondent)

The Diesel Engine.

The other day a writer was explaining that, in the course of a few years, the petrol engine would be obsolete so far as its use for motors and aeroplanes is concerned, and that its place would be taken by a Diesel engine. As Professor A. M. Low wrote recently in the *Motor*, one of the surprising facts in connexion with the growing popularity of the Diesel motor for aeroplanes and heavy cars is that the reasons for high compression and high thermal efficiency are frequently stated, without the everyday motorist realising that his own engine is constructed on lines which are obviously opposed to fuel efficiency.

It has been suggested that variable compression motors help us to use a higher compression ratio when revolving at high speeds, but it seems to be forgotten that at high revolutions and low throttle openings, the compression is deliberately reduced by rarifying the charge as it passes the constricted throttle area and by allowing too short a time for a proper weight of mixture to reach the combustion chamber under a totally inadequate pressure of 14.7 lb. per square inch. It is known that at the top of a mountain pass, an engine must lose power, yet we permit motors to escape our vigilance in this respect every day. I commend the point to the attention of a gentleman who, being ignorant of the difference between speed and acceleration, asked me the following question: "If," he said, "the starting handle of a car was gripped firm when the engine fired, would the whole car revolve round the stationary handle?"

Motor Cycling.

Motor cyclists, who as a body are far more careful than the majority of car users, are gradually losing the bad name they earned a few years ago when speed was considered by them to be the one thing to be desired. Now those who, by having no thought for the comfort of other members of the community, bring the sport into disrepute, are in the minority, and experienced motor cyclists have nothing but condemnation for that kind of conduct. At the same time, as the leading motor cycling organ put it recently, there is a clear case for the clubs to do all that lies in their power to put their houses in order. In one particular direction they could make an immediate move which would go far towards removing a considerable amount of the criticism which is directed against them. We refer to Sunday afternoon events. In many cases there is really little reason why they should not be held on Saturday, and practically never are there any good grounds for employing the afternoon instead of the morning. During the long hours of daylight which we are enjoying at present, Sunday trials finishing at 10 a.m., which would mean a start about 6.30 a.m., over a route which carefully avoided the liklihood of causing annoyance to those engaged in worship, have everything in their favour.

Motor Ships.

There is at the moment something rather like a slump in connexion with motor shipbuilding, as it appears that orders for ships of any class, whether motor driven or otherwise propelled, have been practically non-existent for the past month or two. Nevertheless, the motor ship seems to be holding its own, for, according to the journal of that name, there are now 365 oil-engined vessels, totalling 2,300,000 tons gross on order, the figures being slightly larger than those at the beginning of the year. Since the first of January, 82 motor ships have been ordered, but the majority are tankers, together with a few passenger vessels. Contracts given out for cargo carriers are practically negligible, not because the oil-engined vessel has been found unsuitable for cargo work, but simply by reason of the prevailing depression in freights. Of the 82 vessels, only 29 are being built in British yards. The number of steamers ordered during the past few months has been smaller than that of motor ships.

ELECTRIFICATION IN YUGOSLAVIA.

The annual production of electric power in Yugoslavia is about 460 million kilowatts, which gives an average per head of the population of 38 kilowatts. This means (says the *Belgrade Economic Review*) that Yugoslavia might increase both its output and consumption of electricity. In this respect it is only starting, and work on a large scale is only about to begin now. Of the total output of electrical energy 74 per cent. belongs to hydraulic and only 26 per cent. to caloric power.

Out of the total of 460 million kilowatts 180 million come from the great hydraulic power station of Fala on the river Drava at Maribor, which was set up by a Swiss company. In addition to supplying a large factory, this station provides current to the greater part of northern Slovenia, and efforts are being made to extend its activities into the Sava Banovina. The electrical power stations on the rivers Krka and Cetina in Dalmatia, which belong to the French company La Dalmatienne, are capable of producing 110 million kilowatt hours. Installations are now being set up which will steadily increase their output to 550 million kilowatt hours, and in ten years it will be raised to 900 millions.

In Slovenia a large caloric power station has been erected at a state mine, which is to supply current to a large part of central Slovenia. The Zagreb caloric central station and the hydraulic power station at Karlovatz have been connected for the last two months, and can now supply a surplus of power alternately. Efforts are now being made to increase considerably the capacity of the Karlovatz hydro station, while another large caloric station is to be established at a mine in the neighbourhood of Zagreb.

Schemes are being made to extend and connect up existing power stations at some of the Bosnian mines in the Drina Banovina. This would mean the supply of cheap electrical power to the whole Banovina. In the Danubian Banovina a Swedish group has acquired a number of municipal electrical stations. This company contemplates the connection of these existing stations and the construction of a large caloric central. Thus the electrification of the country is going forward rapidly. Very soon a law dealing with this question is to be promulgated and will speed up the process even more.

There were 167 exhibitors at the Zagreb Spring Fair, of whom eleven were British.

The Government of Mysore have approved a scheme for the development of the water supply system.

The Egyptian State Railways have given a contract to Holt and Willets, Cradley Heath, for 92 traversing jacks for breakdown services.

The Bengal-Nagpur Railway have placed contracts with Beyer, Peacock, and Co., Manchester, for twelve F-type locomotive boilers and with the Hanoversche Maschinenfabrik Gesellschaft, Hanover den Linden, for 13 H.S.M.-type locomotive boilers.

Company Meetings.

KASSALA COTTON.

Promising Outlook.

The Hon. A. M. Asquith's Speech.

The seventh ordinary general meeting of the members of the Kassala Cotton Company, Ltd., was held on May 30 at Winchester House, Old Broad Street, E.C. The Hon. Arthur M. Asquith, D.S.O. (the Chairman), presided.

The Secretary (Mr. W. O. Simms) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—Sir Frederick Eckstein is unable to be with us to-day. He has undergone two operations in the last three weeks, and his condition still gives cause for a good deal of anxiety. I am glad to be able to tell you that he is reported to be going on as well as can be expected in the circumstances. I spoke to you last year of the prominent part which he had taken in the formation of our company and in the guidance of its fortunes. Probably only his colleagues can appreciate how much the company owes to his help. You will, I am sure, wish to join the Board in expressing to his family our deep sympathy with them in their prolonged anxiety, and our warmest wishes for his rapid and complete recovery. (Hear, hear.)

I presume that you will agree to take the report and accounts as read. (Agreed.)

In the balance-sheet you will see that during the year we redeemed and cancelled a further £10,800 of our debentures, so that £58,500 in all had been redeemed up to December 31, 1929. The figure £4,770 7s. 7d. at the credit of debenture redemption reserve account represents the difference between the nominal amount of such debentures and the cost to the company of their purchase for redemption.

Under creditors, the figure £12,716 10s. consists mainly of a provision for taxation, which, we are advised, is more than ample.

On the assets side of the balance-sheet, the item "Balance of expenditure in respect of the concession in the Gash Delta" is reduced by the instalments received from the Sudan Government during the year—£14,346 10s.

The item "Expenditure in the Gezira" stands at £116,725 1s. 5d., as against £30,331 10s. 5d. last year. This increase of about £77,393 is accounted for by the completion of development, canalisation, buildings, etc., on our original area of about 45,000 feddans, and partly by similar expenditure still in progress on our new additional area referred to in the report. The purchase of "heavy implements"—which means windlass cultivators—accounts for the sum of £23,350.

Additional capital expenditure in the Gezira in the year 1930 to complete the equipment of the new extension should be comparatively modest in amount.

The item "Debtors—Sudan, £41,685 11s. 3d." consists almost entirely of advances made to our tenant cultivators towards financing them in the cultivation of the cotton planted during the latter half of last year. These advances are recoverable out of the proceeds of the crop, the picking of which is now almost completed.

"Cash at bankers, on deposit, and in hand," stands at £130,307 14s. 1d., as against £208,794 17s. 4d. This decrease of £150,487 3s. 3d. is accounted for by the expenditure and advances which I have dealt with by tax payments and by the excess of debenture interest payments over the year's net revenue.

Profit and Loss Account.

Turning to the profit and loss account, you will see that our profit, before charging debenture interest, amounted to only £2,568 this year, as against £13,008 in 1928.

Revenue, consisting of interest earnings and of commission received for selling the Government's cotton grown on the Gash Delta was nearly £3,000 down. This was, of course, due to the reduction, through capital expenditure, of the funds in our hands.

General expenses, at £11,128, were £7,721 up, this being due to the inclusion of cultivation expenses up to December 31 last.

Our financial year ends on December 31. At that date half a season's cultivation expenses have been incurred, but scarcely any of our crop has been picked, and none of it has been marketed.

It will be more convenient to make our financial year coincide with the agricultural season, and we have, therefore, decided to make this change.

This means that in future our financial year will end on June 30, instead of on December 31, and that the next accounts which we shall present to you will cover the 18 months ending June 30, 1931.

I am advised that this will entail our formally holding our next annual general meeting within 15 months of the present date, and adjourning it to a date in the autumn by which accounts to June 30 should be ready for presentation.

I am glad to be able to add that again this year the Government have entrusted to us the selling of their Gash crop, which is an exceptionally big one.

The upshot of our accounts is that we came into the year 1929 with a carry-forward of about £62,281, and we went out of it with a carry-forward of about £37,020.

During the development of our new concession area we have had to maintain ourselves out of past profits and interest earnings. We have come out of this period much better than we had calculated that we should, but it is a great relief that in our next financial period we shall be enjoying the benefits of revenues derived from the cotton crop.

Now, as to the year's work. I gave you last year some account of the work which had been done up to May last year in the development, canalisation, levelling, ploughing, ridging, equipment, and allotment to tenants of our concession area.

The acreage of crops planted was as follows:—Cotton, 15,500 feddans; dura, 5,752 feddans; lubia, 9,706 feddans. A feddan is practically the same as an acre.

In the planting season—July and August—there were abnormally heavy rains. As compared with other parts of the Gezira Plain, we were quite exceptionally favoured in the incidence of this rainfall, and our cotton did not suffer to any great extent.

The abnormally rainy planting season was followed by an exceptionally cold spell in December and January, but as the plants had not suffered much from the rains they were able to withstand the adverse effects of the cold weather, and a very satisfactory crop has resulted. The yield to date is 67,796 kantars, of 4.36 kantars per feddan, and there is still a little to pick. But for the exceptional cold we should have exceeded this very satisfactory figure. Our share of the proceeds of this crop will appear in the accounts for the next financial period.

During the year we have been engaged with the Sudan Government in expanding into a detailed concession agreement the heads of agreement under which we have been working. No serious difficulties have yet been encountered, and I hope that we may have an agreed document signed by both parties this year.

The staff provident fund, which I mentioned last year as being in contemplation, is now in being, its funds being held by trustees outside the company.

The Additional Area.

I would now call your attention to a very important paragraph in our report—I mean that which records the Government's agreement to an extension of our concession area by approximately 15,000 acres. This area is conveniently irrigated from the same main canals which serve our other blocks. The land is considered to be up to the general average of the irrigated areas of the Gezira Plain.

We are to receive 20 per cent. of the proceeds of the cotton crop grown on this additional area, the terms in this respect being identical with those obtaining on the greater part of the Sudan Plantations Syndicate's concession area.

With this addition our total area exceeds 60,000 feddans. Satisfactory progress has been made with the development and equipment of this extension, and we hope to plant in cotton this autumn 20,000 feddans, which is the maximum, or approximately the maximum, area possible under the system of a three-years rotation.

You will appreciate how valuable an addition this is to our company's concession, and how great an advantage it is to have this basis of a broader acreage to come and go on. I should like you also to appreciate that for this great improvement in our position we are indebted to the labours of our managing director, Mr. MacIntyre. (Applause.)

To sum up—under our original programme we were to have picked a crop from 5,000 feddans this season. Instead of this, we have picked a crop from over 15,000 feddans. (Applause.) In a difficult year we have been lucky in obtaining a very good yield. A few small sales have been effected at satisfactory prices, but the marketing of the bulk of the crop is still ahead of us. Conditions in Lancashire and in the world generally are not such as to help those who have commodities to dispose of.

Among the more permanent factors in our fortunes, we have the facts that our land has in practice proved itself to be exceptionally good, and that with the extension of our concession area we have the basis of a broader acreage to come and go on.

Tribute to Sudan Government and Company's Staff.

Finally, I think you will wish to join the directors in thanking the officials of the administrative, irrigation and railway services of the Sudan Government for their usual helpful co-operation in the common interests, and in congratulating Mr. Fleming, our manager, and his staff on their success with this their first crop in the Gezira. Mr. Fleming came to the Gezira with a small nucleus staff experienced in the very different conditions ruling in the Gash Delta. The rest of his personnel has been recruited over the last two years. To have produced these good results in their first year of cultivation—and that a year of exceptionally difficult conditions—is a great achievement, and Mr. Fleming would, I am sure, wish me to give a large share of the credit for these results to the senior officials of the Sudan Plantations Syndicate, whose help has always been freely given, and without whose help these results could not have been so quickly or so economically achieved.

In the accounts which are before you we have made no provision for any bonus to our staff. Out of the proceeds of our good crop, when realised, it is in our minds to set aside about £1,500 for this purpose. Our staff in the Sudan and in London have served us most conscientiously and well and the climate of the Sudan is fairly severe. I feel sure that this recognition will meet with your approval. (Hear, hear.)

Digitized by Google

I now beg to move: "That the report of the directors and statement of accounts to December 31, 1929, now laid before the meeting, be and they are hereby received and adopted," and I will call upon Mr. Alexander MacIntyre to second the motion. (Applause.)

Mr. Alexander MacIntyre (managing director) said: Gentlemen, I think that our Chairman has given you such a clear picture of the company's position that there is very little than I can add. I was out in the Sudan during the winter months and spent a good deal of time on the company's concession. I was very pleased indeed with everything I saw and with the good work which has been done by the manager and his staff. I would like to endorse your Chairman's statement as to the benefits which will accrue to the company by having the area extended. This will be of great value in keeping up the average returns in years of low yield and in years of low prices, and in normal years will add to revenue.

The company has had a very good cotton crop, and had the climatic conditions been more favourable it would have been a bumper crop. When the present crop which has just been picked is sold, and if the average prices now ruling are maintained, I see no reason why the company in its next financial year should not be in a position to pay some dividend on the Preference and Ordinary shares, as well as earning debenture interest. (Hear, hear.) I am sure that nothing would give our Chairman greater pleasure than to be able to do this.

The company has had rather a "long row to hoe." Through no fault of its own it has not had only to carry out the development of the whole of the Gash Delta concession, but also to start afresh and develop and bring to fruition our present concession in the Gezira. This has been done in record time and without increasing the company's capital. Meanwhile debenture interest has been paid regularly and a substantial number of debentures have been redeemed. This is no mean achievement, and reflects the greatest credit on the ability of your Chairman, General Asquith, and of his colleague, Sir Frederick Eckstein, who, on this side, have given of their best at all times to make the company successful.

I have much pleasure in seconding the resolution proposed by the Chairman. (Applause.)

The resolution was carried unanimously.

Sir W. H. Himbury (the retiring director) was re-elected, and Messrs. Cooper Brothers and Co. were reappointed auditors of the company.

A cordial vote of thanks to the Chairman concluded the proceedings.

EGYPTIAN MARKETS.

Commercial Conditions in Egypt.

The ordinary general meeting of the Egyptian Markets, Ltd., was held on May 28 at Winchester House, Old Broad Street, E.C., Lieut.-Col. A. St. John Cooke, D.S.O. (chairman of the company), presiding.

The Secretary (Mr. F. R. Parker) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—Before I proceed with the formal business of the meeting, I have, with the deepest regret, to refer to the sudden death, in November last, of Mr. A. Hook, our general manager in Egypt. Mr. Hook joined the company in 1900 and for thirty years—that is to say, practically from its inception—gave of his best in the various responsible positions he held; finally, in 1923, being appointed general manager. This post he filled to our entire satisfaction. His death is a great loss to the company, and to some of us who have been in close touch with him for so many years his loss is felt as a personal friend.

Fortunately, in Mr. E. S. R. Trevor, who has been appointed to the vacant position of general manager, we have a gentleman who has been in the company's service for some twenty-three years, and who for the past seven years has been second in command, taking charge of the whole business during the periodic absences on leave from Egypt of the general manager. We have the great advantage, from practical experience, of knowing Mr. Trevor's worth, and that he is intimately acquainted with all branches of the company's activities. In that knowledge we had no hesitation in appointing him to the vacant position, and we feel assured he will fully justify our confidence in him.

Now, gentlemen, with regard to the directors' report and the accounts, which are in your hands, I think you will agree with me when I say that, taking into consideration the uncertain political conditions in Egypt, and the period of world-wide financial, agricultural and commercial depression through which we have passed during the year under review, and from which, I may add, Egypt has seriously suffered, the results from our business are a matter for congratulation.

So far as the commercial and financial conditions are concerned, this company is a certain and reliable barometer of the trend of affairs. The very nature of our business, which is carried on in the closest association with the peasantry and small farmers, and which is entirely dependent upon their fluctuating prosperity, indicates this. Should there be a financial stringency, this is immediately reflected in the provinces by a shortage of money among the fellaheen and merchants, and it adversely affects our markets. Should there be a failure, or partial failure, of crops, or should the market price of products fall, this again is, for the same reason—namely, shortage of money—at once felt by us.

We, in common with most other commercial enterprises, have had our reverses, the principal of which was in connexion with our artificial manure business. In my remarks at the last meeting I mentioned that under new regulations, sponsored by the Chilean Government, the price of nitrate of soda had been stabilised, its distribution regulated and arrangements had been entered into by this company under which we hoped to experience a steadily upward improvement in our sales. I regret to say that this hope has not been realised, for the reason that in June last we received as short a notice as five days, without any previous indication that such a course was contemplated, that the agency arrangement under which we had been working was terminated.

This, we were informed, was the result of the decision of the Nitrate Producers' Association, in conjunction with the Chilean Government, which was to revise the basis of the previous year's scheme, under which rearrangement agents, as such, were entirely excluded unless they were prepared to act as merchants and to purchase large consignments of not less than 10,000 tons or a full cargo.

Now, gentlemen, we are agents, not buyers, and have laid down the principle that our activities should be confined to working on a commission basis. To become involved as merchants in such a highly speculative business as this now is would, in our opinion, have been far too risky, and your directors, therefore, reluctantly decided to discontinue that branch of our business unless and until opportunities arise which will justify our re-entering the market.

An interim dividend of 5 per cent. was paid in November, 1929, and your directors now recommend the payment of a final dividend of 5 per cent. and a bonus of 1 per cent., making a total distribution of 11 per cent. for the year, the same as for the last year, absorbing £19,217, and the payment of a dividend of £8 17s. 8d 24/300d. per share on the Deferred shares, absorbing £2,666 0s. 7d., leaving a balance of £14,294 8s. 9d. to be carried forward, as compared with £14,203 7s. 5d. brought into the accounts from 1928.

With regard to the current year, I am reluctant to express any opinion upon the immediate agricultural and commercial prospects of Egypt, but I do feel that the country is so full of resources and so intrinsically sound that we may reasonably hope for some improvement in conditions generally. As far as our business is concerned, at this early stage it is not safe to attempt to forecast what the results will be for 1930.

Our managing director, Mr. F. J. Horne, has recently returned from an extensive inspection tour of our markets throughout Upper and Lower Egypt. He expresses himself as satisfied that the staff are working well and loyally in the interests of the company and that our markets are well managed and conducted. I have just returned from Egypt myself, and I can corroborate your managing director's views.

The motion was carried unanimously.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 28 :—

Egyptian Futures.

Sakel Contract.—Dull and uninteresting conditions have obtained in this market during the majority of sessions since our last report and the restricted amount of trading recorded has been of a featureless character. The daily fluctuations have only amounted to an odd point or two either way, and, taking the November position, the movement on the week has ranged between 12.36d. and 12.48d. As far as the trade situation is concerned, the outlook continues to be unfavourable, little fresh yarn business is coming in, and most outlets have ceased to operate for the time being. With this the case, spinners have no encouragement to purchase actual; in fact, in some cases they show a disposition to resell any surplus stocks they have rather than carry them into the heavy discount now ruling. Alexandria advices show little activity ruling at the other side and, apart from a slight temporary bulge following a rumour that the Government were to extend their purchasing operations to November, prices have been held at a steady level. There is nothing in the outlook to warrant the adoption of a decided view, but, at the same time, we consider that new crop prices have worked down to a reasonable level, and in view of our remarks of last week regarding the restricted supply of floating contracts, we think that purchases at to-day's basis might readily be liquidated on adverse crop news during the summer months.

Upper Contract—Trading in this market has again been of an extremely light character, only a few transactions, and those mainly in new crop months, being recorded from day to day. Support from trade sources has again been almost entirely absent and very little business has taken place in the spot department. In the absence of a trade lead or any new crop developments, we consider that price movements will continue to be mainly governed by the fluctuations in the American markets.

Egyptian Spot.

Conditions on the spot here have been even quieter than last week, both for Egyptian and Sudan varieties, particularly as regards the latter. There has been no improvement in conditions up-country, and a somewhat disquieting feature of the situation has been a certain amount of spinners' cotton that has appeared for re-sale; some of it has even been tendered here against contracts. There has been practically no inquiry from the Continent or America.

Sakels.—The inquiry has been of a very moderate description. Generally, it has been the better qualities, from 150 on upwards, which have attracted attention, but sales have been insignificant. Medium qualities have been neglected, and, although the low and inferior cottons have been inquired for from time to time, buyers have been in such a low key that the amount of business put through in the last-named has been practically nil.

Uppers.—A moderate inquiry has been witnessed, principally for cotton at from 70 to 90 on. In a lesser degree, the "off" qualities have been asked for, but with very little result.

Pilion.—The demand for Pilion has, to all intents and purposes, faded away for the time being.

Nahda.—A small amount of interest has again been manifested, but here again spinners' ideas as to what the cotton is worth appear to be at considerable variance with those of sellers. Nevertheless, we believe that this cotton is slowly coming back into favour, and with any improvement in demand a better turnover should be witnessed.

White Cotton.—Rather more business has been done.

Tokar Sakel.—The inquiry has been only on a moderate scale, but slightly more business has been put through, particularly in new crop, which apparently is finding more favour with spinners than the old.

Sudan Sakel.—This cotton has suffered from the general lack of inquiry.

C.i.f. business has again been merely nominal.

Forwardings were returned as 3,768 bales Egyptian and 1,604 bales Sudan. Spot sales have been estimated at 700 bales Egyptian and 150 bales Sudan Sakel. Quotations of Sakel remain unchanged on the week; Uppers and Pilion both show a reduction of 5 points. F.G.F. Sakel to-day, 13.85d. F.G.F. Upper to-day, 10.11d. F.G.F. Pilion to-day, 10.80d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended May 22 :—

Since our last report the futures market has shown very little activity and the tendency has again been bearish. The week's summary of price movements is as follows:—Sakellaridis: July, 28.13 dollars, unchanged; November N.C., 24.01 dollars, 0.41 dollars down; January N.C., 25.19 dollars, 0.42 dollars down; March N.C., 25.54 dollars, 0.45 dollars down. Ashmouni: June, 19.80 dollars, unchanged; August, 18.25 dollars, unchanged; October N.C., 17.53 dollars, 0.04 dollars down; December N.C., 17.84 dollars, 0.08 dollars down; February N.C., 18.20 dollars, 0.10 dollars down; April N.C., 18.52 dollars, 0.10 dollars down.

Sakel.—We have had a series of more or less inactive markets, the business done being almost entirely of a professional character, or in connexion with straddling against Uppers. These straddle operations consisted of sale of November Sakel against purchases of October Upper, and the decline of about half a dollar this week may be attributed principally to the weight of these sales. Against the third May tender, dockets for 61,000 kantars were issued; the total dockets issued during May amount to 440,000 kantars, and the total quantity of Sakel since the beginning of the season is 1,930,500 kantars, an enormous figure, which will be further augmented by July tenders.

Spinners continue to be quite indifferent, and the few small sales effected have been for very low grade cotton. There is nothing in the present situation giving cause to expect any important change in ruling conditions, and we can only again repeat that we look for dull markets in the immediate future, with a rather weak tendency.

The Sakel/Uppers new crop straddle (November/October) this week stands at 738 points, against 775 points last week and 1,237 points at this time last year.

Uppers.—In this market also there has been very little movement, but a slightly firmer tone has prevailed due to the straddling alluded to above. Spinners' interest in Uppers has been very moderate, both for old and new crops. The difference between October Ashmouni and October New York has contracted slightly again this week, and prospects are for a still further narrowing should the proposed American import tax on long staple cotton be finally adopted. As in the case of Sakel, we look for a continuation of rather heavy and slightly bearish markets.

The Ashmouni/American new crop straddle (October/October) this week stands at 243 points, against 258 points last week and 289 points at this time last year.

The week's receipts amount to 54,516 kantars, against exports 118,589 kantars; the stock in Alexandria stands at 3,942,012 kantars.

Spot.—The total turnover this week amounts to about 5,900 bales, of which we estimate 1,300 bales Sakellaridis, 3,800 bales Ashmouni and Zagora, 450 bales Nahda, and 350 bales Pilion and Maarad.

Sakellaridis.—Apart from a few lots of Good to Fully Good and Fully Good which changed hands at very low premiums, this variety was very neglected, and only the very inferior grades were in demand.

Ashmouni and Zagora.—There was a small demand for Good Fair and Good Fair to Fully Good Fair, but in these varieties also the bulk of the business done was in the very low grades.

Digitized by Google

Pilion.—A few lots have changed hands at last week's premiums.

Other Varieties.—There was a renewal of the demand for the top grades of Nahda, and in spite of the poor premiums paid, most of the sellers were forced to part with their cotton owing to the fact that Nahda is not tenderable against contracts.

Crop, 1930.—Weather conditions during the week under review have been somewhat variable in the Delta, but favourable in Upper Egypt. The germination of the plant this year has in general been very satisfactory. The state of the crop is about normal in the majority of districts; there is a slight delay in the Central and North Delta, but there is a good chance that the delay, or at any rate a part of it, will be gradually recovered during the next few weeks. The supply of water is satisfactory, and the outlook for the summer is very favourable.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended May 31:—

Currants.

Greek.—Somewhat brighter conditions have developed during the past month, the tone being better than in that which preceded, but this cannot be attributed to any expansion of business or to any advance in prices. Progress continues to be slow and difficult, and there has been no increased volume of turnover. A very substantial improvement in this respect is needed before any real confidence can be imparted to the market. Small supplies per s.s. Bactria, Algerian and Manchurian replenished our moderate stock, but buyers are still acting with extreme caution, and the fact that quotations for new crop fruit are on a lower basis is an additional deterrent to any impulse which might otherwise exist to purchase beyond actual requirements. Medium grades have met a dragging trade, inquiry centring mostly round Vostizza and lower grades. Small fruit is scarce. Sales were:—Pyrgos, 36s.; Amalias, 37s. 6d. to 38s.; Zante, 37s. to 38s.; Patras, 39s. to 41s.; Gulf, 38s. to 45s.; Vostizza, 49s. 6d. to 58s.; few fine, 62s. Quotations are:—Pyrgos, 36s.; Amalias and Patras, 37s. 6d. to 41s.; Zante, 37s. to 38s. 6d.; Gulf, 38s. to 45s.; Vostizza, 48s. to 58s.

New Crop.—Forward business has received some attention, and sales are reported as follows:—Pyrgos, 28s.; Amalias, 29s.; Patras, 30; Gulf, 33s. 6d. c.i.f. for September and first half September shipment.

Sultanas.

Smyrna.—Although rather brighter conditions developed during the course of the month, upon the reports of damage to the vines, no real improvement in values was possible. Sales were:—Good quality, 40s. to 43s.; Fine, 51s. to 52s.

Cretans.—Ordinary, 30s. 6d. to 32s.; Good, 43s., Fine, 51s. to 60s.

Greeks.—Ordinary, 32s. to 33s.; Good, 40s.; Fine, 54s., up to 68s. Choice.

Figs.

Sales of Genuines were made at 20s. to 26s. New crop Genuines offered at 21s. c.i.f. for September shipment.

Why not visit

The SUDAN?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

The Roumanian Coup d'Etat.

Roumania has applied a remedy to the sore of her body politic that is altogether to the nation's liking. The exiled Prince Carol, who had renounced the Throne three times and had been excluded by law from the succession, made a dramatic return by aeroplane to Bucharest on the night of June 6. Having satisfied himself of the support of the garrison at Cotroceni Barracks, he drove to the neighbouring Palace, where he was welcomed by his brother, Prince Nicholas, one of the Regents. Visits from Dr. Maniu, Prime Minister, General Condeescu, Minister for War, and General Cihoski, his predecessor, followed during the night, and in the morning the Roumanian capital learned from its newspapers of Prince Carol's return. The reception of the news was clearly favourable, and it remained to regularize the Prince's position. At first not only the Cabinet, but probably also the bulk of the population seems to have contemplated nothing more than Prince Carol's inclusion in the Council of Regency; but the enthusiasm evoked by the Prince's return soon gave rise to the suggestion that he should be made King. The problem of the Council of Regency was solved by the resignation of its members, Dr. Maniu's Government, which had taken the oath of allegiance to the Regency, also resigned, a Ministry under M. Mironescu was formed, and the two Houses of Parliament were hastily summoned to meet on Sunday morning. All constitutional enactments directed against Prince Carol's accession were repealed, and the two Houses, constituting themselves a National Assembly, proclaimed the Prince as King Carol II. In the afternoon the new King drove amid scenes of great enthusiasm to Parliament House, addressed the assembled representatives of the nation, and took the Oath to preserve the Constitution. A spontaneous welcome appears to have been extended to King Carol II from all parts of the country, and the popularity of the *coup d'état* admits of no question.

Contributory Causes.

As it is an axiom that desperate diseases call for desperate remedies, the accession of King Carol II need be considered only from the point of view of Roumania's interests. His exclusion from the succession and his exile were more in the nature of concessions to opinion outside Roumania to which the Dynasty had to subscribe than a penalty imposed by Roumanian social standards. The exuberance of the welcome accorded to him suggests how little the judgment of fellow-Roumanians condemned his past conduct, even if he did appear to offer in his person the only means of escape for the country from an embarrassing situation. Less than two years ago the personal rule of the Bratianu family had been interrupted by the advent to power of the National-Peasant Coalition under Dr. Maniu. In spite of its good intentions and honesty Dr. Maniu's Government had not succeeded in conveying the impression of being firmly seated in the saddle; reconstruction of the Cabinet had been frequent, and there could be no doubt that M. Vintila Bratianu, the Liberal Leader, had already made up his mind that the time was approaching when he would be able to reimpose his ascendancy over the Roumanian people. As the custom is for political struggles in Roumania to be conducted after the manner of a minor civil war, there is always the danger that the victor may be tempted to arrogate to himself an authority not altogether consistent with constitutionalism, unless his ambitions can be kept in check by a higher power. Under King Carol I the Throne imposed the necessary curb, which remained, if slightly less effective, during the reign of King Ferdinand. From the experience already gained of the Regency it had become evident that this check had ceased to exist and a very real fear came to be entertained, rightly or wrongly, in many quarters that the next Government of M. Vintila Bratianu might prove indistinguishable from a dictatorship. At the same time the attitude towards the Dynasty with which M. Bratianu was credited and his personal hostility to Prince Carol were regarded as still further endangering a situation already sufficiently precarious as a result of the serious economic crisis through which the country is passing. The new King's first duty, therefor, will be to insure for the country a Government representative of all the talents, preferably of all the parties, which, backed by the confidence of the nation, will enjoy sufficient stability to carry through an agreed programme of reconstruction, to rescue Roumania from her present economic difficulties. The task to which he has now put his hand will not be an easy one.

A Cyprus Press Law.

Constitutionalism and the liberty of the Press are supposed to be words to conjure with before the British public, but the frequent appeals that have been made to

Digitized by Google

its sympathy in connexion with such matters have engendered a tendency to investigate alleged breaches of the principles involved with a view to finding out what lies behind the breaches. Consequently, when the Greek-speaking Cypriots denounced a recent Press Law passed in the Island as a grave blow to the liberty of the Press, which is described as "so drastically fettering journalism as to constitute an actual menace to the free and legitimate expression of public opinion," interest in the subject calls for fuller explanation. As Cyprus is a British Crown Colony, the first question that arises is, What particular conditions exist in the Island calling for a Press Law differing in any way from what is required in Great Britain? The new Law enacts that those dismissed from Government service may not own nor publish a newspaper, and it requires substantial guarantees of financial integrity from newspaper proprietors. It has, therefore, to be inferred that in the past the practice has grown up of dismissed officials carrying out a vendetta against the Government through their own newspapers; and, possibly, if the two enactments hang together, when a breach of existing laws has been committed, it has been found that the nature or standing of the newspaper renders it useless to take legal proceedings. It is difficult to believe that any responsible inhabitant of Cyprus can suggest that there is any connexion whatsoever between the liberty of the Press and a state of affairs that brings a newspaper into existence to serve the ends of a personal vendetta or that regards as a newspaper some mere broadsheet that hides its owner's responsibility behind a man of straw and which has to cease to appear rather than face the prosecution to which it has deliberately exposed itself. Wider experience of both the liberty and the responsibility of the Press, it would be imagined, would have prompted those now protesting to thank the Cyprus Government for trying to set a standard for newspapers printed in Greek which will help to remove a serious blot on the Cypriot reputation for intelligence, honesty and decency.

Palestine and the League.

The speech made by Dr. Drummond Shiels last week before the Permanent Mandates Commission will, it is to be assumed, have removed many of the apprehensions which were invading Jewish breasts over the future of British policy in Palestine. Almost all the recent actions of the Government in this problem of Palestine have been interpreted by the Jews in an anti-Jewish sense, but that no such motive was actuating the British Government was always obvious to those who were, so to speak, "above the battle." So convinced, however, did world-Jewry appear to be that the temporary suspension of immigration into Palestine was a deliberate violation of the Mandate and virtually the end of all things that the Under-Secretary for the Colonies took it carefully upon himself to disabuse the League of such a preposterous notion and to attempt to soothe Jewish susceptibilities. He made it abundantly clear at Geneva that the British Government does recognise the benefits that have been conferred upon Palestine by "the remarkable enterprise and devotion of the Jewish people," and he once again emphasised the Government's belief that means will be found for the Arab and the Jewish civilisations to develop side by side in Palestine. That this is a very long view will not be denied. A casual observer in Palestine to-day might well be pardoned for asserting that the Arabs and the Jews will never really come together, so strong, so apparently inevitable are the causes and the forces making for separation. There are, however, other forces at work, imponderable, incalculable, not often very tangible, which it is the duty of all men of good will to foster. If that duty be done, the dream of the British Government—the creation of a Palestinian people—may one day be realised.

A Magnificent Exploit.

Elsewhere in this issue we publish a summary of the lecture which Sir Arnold Wilson delivered last week to the Royal Geographical Society on the subject of the achievement of Mr. Bertram Thomas, first made public at this meeting, in penetrating into the sands of the *Ruba al Khali*. The accomplishments of the young English Financial Adviser to the Sultan of Muscat and Oman will not be unknown to readers of THE NEAR EAST AND INDIA, but his latest feat, in journeying northwards into the sands as far as the 20th degree Latitude, is without question one of the finest pieces of post-War exploration. It is, indeed, a classic performance. One is reminded, on reading of Mr. Thomas' dive into these dreaded sands known as *Ar Rimal*, of the words used by the new Chancellor of Cambridge University at the ceremony of installation last week. With the poignant memory of Mr. A. F. R. Wollaston in mind, Mr. Baldwin said: "I have always felt that those men who go into the uttermost parts of the earth and those who attempt to scale virgin mountains are, indeed, princes among men." It is, perhaps, too early yet to estimate the precise contribution which Mr. Thomas has made to geographical and scientific knowledge by this latest exploit in *Ruba al Khali*, but it is certainly considerable. In offering him heartiest congratulations upon his achievement—which we should like to see suitably rewarded—we may express our confidence that, given luck, or, rather, a concatenation of favourable circumstances, he may yet actually traverse the Empty Quarter, solve for us what Sir Arnold Wilson has called "the Riddle of the Sands," and thus accomplish his heart's desire.

THE SIMON COMMISSION'S REPORT.

(Continued from page 647.)

chapters into which the section is divided dealing with all the leading features of the financial problem. "The Growth of Education" and "Public Opinion in India" are dealt with in Part VI and Part VII respectively. The recommendations which will be set forth in the second volume of the Report will, doubtless, be freely criticised in this country, in India, and at the Round Table Conference. But, whatever may be the merits and defects of the second volume, it is impossible to read the first without recognising that it is a masterly exposition and analysis of present-day political, social, and economic conditions in India. It deals with every aspect of the Indian problem, and it sets forth the facts with extraordinary lucidity and skill. It is indeed a striking tribute to the ability, energy and perseverance which the Commissioners, under the leadership of their distinguished Chairman, have brought to bear upon a task the magnitude, complexity, and difficulty of which have not been, perhaps, always fully recognised.

THURSDAY, JUNE 12, 1930.

THE SIMON COMMISSION'S REPORT.

The publication of the first volume of the Report of the Statutory Commission marks a stage of signal importance in the progress of Indian constitutional development. This volume, which was issued on Tuesday, is occupied with a general survey of the field of inquiry. The second volume, which will appear on June 24, will present the recommendations which the Commissioners have decided to make. This method of publication has been adopted, because it is thought to be very desirable that time should be allowed for an examination of the survey before the recommendations are considered. With this view there will be general agreement, seeing that the questions connected with the constitutional development of India are of such complexity and importance. The attitude of the Commission towards the problem is made clear in the introduction, where it is very definitely stated that Mr. Montagu's announcement in the House of Commons on August 30, 1917, "supplies the governing conditions to be observed and satisfied by any and every scheme for India's future constitutional progress." And, further, "We enter upon our task, therefore, upon the basis and assumption that the goal defined by Mr. Montagu represents the accepted policy to be pursued, and that the only proposals worthy to be considered are proposals conceived in the spirit of the announcement of August 20, 1917, and inspired with the honest purpose of giving to it its due effect."

Within the limits at our disposal it is impossible to attempt anything in the way of a summary of the volume which extends to upwards of four hundred pages. We can give only a brief account of it, and direct attention to two or three of its more important and interesting features. In the first place the agreeable fact that it is a unanimous report signed by all the Commissioners, without dissenting minutes, calls for mention. It is divided into seven parts, the first of which consists of ten chapters dealing with the general conditions of the problem, namely, the countryside and the towns; the religious communities; Caste and the depressed classes; the Anglo-Indians; the Europeans; the women of India; the British Provinces; the Indian States; and the Army. In an early chapter of this section the Hindu-Muslim question is carefully and impartially analysed. Hindu-Muslim antagonism is not, the Commissioners observe, in any way analogous to the separation between religious denominations in contemporary Europe. Differences of race, a different system of law, and the absence of intermarriage, constitutes a far more effective barrier. In fact the rivalry and dissension between the two communities are one of the chief stumbling blocks in the way of progress. The distribution of the population, as between Hindu and Muhammadan, adds to the difficulty. And it is, the report observes, a lamentable fact that the tension has not diminished since the Reforms. On the contrary no fewer than 450 lives were lost, and 5,000 persons were injured in communal riots during the five years 1923 to 1927. Communal representation is a feature of the Reforms scheme. The Muslims contend that it reduces the chances of conflict between the two communities. On the other hand, the Hindus maintain that it encourages the appeal to communal sentiment. The Commissioners take the view that communal representation cannot be justly regarded as the reason for the present communal tension. There is not, in their opinion, any solid ground for supposing that, if communal representation were abolished, communal strife would disappear. In so far as the tension is due to the constitutional situation it is, they think, a manifestation of the anxieties and ambitions aroused in both communities by the prospect of India's political future. When authority was firmly established in British hands, and there was no idea of self-government, the members of one community had but little to fear from the predominance of the other. In fact, the good feeling was such, a generation ago, that communal tension as a threat to civil peace was at a minimum. New point has been given to Hindu-Muslim rivalry by the Reforms, and the anticipation of what may follow them. The struggle for political power, and for the opportunities which it confers, is the true cause of the disease. The Commissioners have obviously made a searching investigation into this question of communal representation, and their proposals regarding it will be awaited with keen interest. Of all the questions that arise in connexion with the composition of Indian electoral assemblies it is, they hold, the gravest and the most difficult. On the subject of the Indian States the Commissioners restricted themselves to a general description of the States and to an explanation of their relations with the British Crown. No attempt is made to deal with the question of their position in the future constitutional development of India. It is, however, recognised by the Commissioners that this development cannot be envisaged, unless the existence and influence of the States, and the obligations of the Crown to them, are fully borne in mind. This aspect of the question is to be dealt with in the second volume of the report.

The existing constitutional structure is discussed in considerable detail in Part II of the volume. An interesting feature of this section is the clear view which it gives of the essentials of the system of government which existed prior to 1919 as contrasted with the basic principles of the Reforms scheme. Before 1921 the Governor-General in Council was, within British India, the supreme authority in which was concentrated responsibility for every act of civil as well as military government throughout the whole area. This arrangement was modified by Parliament in 1919. The Governors' provinces were then given the opportunity for a more self-contained existence, and the prospect of a more complete self-government. Another essential feature of the pre-Reform system was that under it Parliament was ultimately responsible for the whole of Indian government. But by the Reforms scheme there was marked out a portion—the transferred subjects—of the provincial field in respect of which the control of Parliament is no longer exercised. A third feature of the old Constitution, which was radically changed by the Reforms of 1919, was the extent to which law-making was in the hands of the Executive. Until 1919 nothing in the nature of a Parliamentary system was contemplated. Even the Morley-Minto Reforms, although they re-constructed and enlarged the provincial Councils and the Indian Legislative Council, maintained the principle that the Legislature was a body the nucleus of which was the Executive itself. A complete survey of the Central and Provincial Legislatures is also given in Part II. The powers and responsibilities of the Viceroy and of the Provincial Governors are likewise defined; and special attention is given to that much discussed feature of the Provincial Executive, namely, dyarchy. The working of the reformed Constitution is treated in detail in Part III, which also contains an interesting account of the course of Indian politics since 1920 in the light of the Reforms. In Part IV the administrative system is dealt with, the organisation and working of the services being set forth. The district as the unit of government is explained, and the powers and duties of district officers are defined. A brief account is given of the judiciary; local self-government is discussed; and a special chapter is devoted to the North-West Frontier Province. Finance forms the subject of Part V, the six

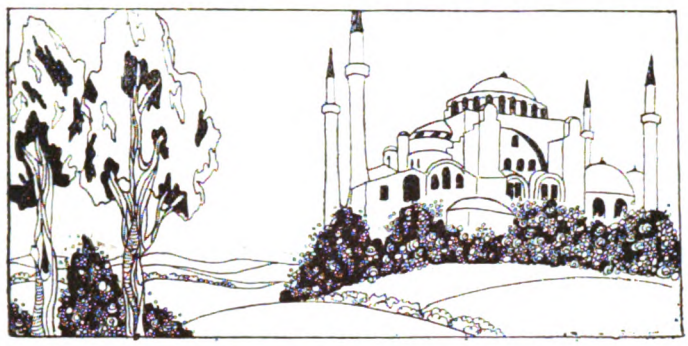
*The Near and Middle East

From Our Own Correspondents.



TURKEY.

Istanbul, May 27.

A Welter of Litigation.

Though lamentations with respect to the stagnation of trade and dwindling incomes are now to be heard on every hand on the shores of the Bosphorus, the legal profession, at all events, can have little cause for complaint on the score of bad times. The Turk, as a general rule, is not particularly prone to contentiousness and litigation; but, whether owing to irritability engendered by the somewhat trying atmospheric conditions which have persisted throughout the whole of spring or from other causes, both Bench and Bar have certainly had their hands full of late. The journalistic element predominates in the long list of defendants against whom actions have been brought recently by both the Prosecutor-General and by individual Ministers. Thus, the Editor of *Yarin* has been sentenced to a term of 1 month and 5 days' imprisonment and his sub-Editor to 3 years and 10 days' with a fine of 20s. for the publication of matter calculated to provoke a breach of the peace; the same Editor has had simultaneously to defend himself against charges of libel brought severally by the Ministers of Finance and Hygiene. Proceedings for defamation of character have been initiated by the former Minister of Commerce, Ali Djenani Bey, against the Istanbul Editors *in corpore*; the latter, moreover, are cited, again for libel, by the Minister of Justice, who, in his turn, is prosecuting Haydar Rifaat Bey, the Leader of the Turkish Bar, once more for slander.

Zekeria Hanoum, Editress of the *Ressimly Ay* (Illustrated Monthly), who was sentenced a week or two ago to a term of 2 months' imprisonment for publishing an article calculated to perturb public opinion, has succeeded, on appeal, in obtaining a rehearing of her case in the lower Court.

The Public Prosecutor has instituted proceedings against Hikmet Bey, who was recently dismissed from the Judicial Bench, for disclosing official secrets to third parties. This case presents some analogy to that of Haydar Rifaat Bey. It has transpired, during the course of the proceedings, which are being taken at Brussa, that the accused submitted to the President of the Republic a long complaint on the score of the illegality of the transfer of the Kadrie Hanoum case from the jurisdiction of the Istanbul Courts to that of the Tribunals at Izmir (Smyrna). The petitioner further complained that difficulties had been placed in his way over and over again by the Public Prosecutor when he, as President of the Court, ordered the arrest of four persons implicated in the grave charge of conspiring with Kadrie Hanoum to imperil the life of the Chief of State; that virulent propaganda had been initiated against his person and that he had been the recipient of a threatening letter from one of the prison warders and that, moreover, every conceivable obstacle had been placed in his way by the Ministerial organs with the object of impeding him in the discharge of his duties as a Magistrate. His dismissal from office had reduced his wife and children to a state of complete destitution. Hikmet Bey's main line of defence rested on the circumstance that it was technically impossible for him, *qua* Magistrate, to divulge official secrets to the First Magistrate in the Land.

To turn to the lighter side of this maelstrom of judicial ebullition, an amusing case has been introduced in the Pera Civil Courts against Mouhieddine Bey, Prefect and acting Governor-General of the City of Istanbul, by the Editor of the *Gol* ("Goal") who happens to be an ardent amateur footballer. The Editor, in a recent match played on the Municipal ground at Taxim, took a bad tumble and grazed his cheek. Anthrax supervened and the amateur footballer languished for several weeks in hospital. It transpires that some cattle had been seen browsing on the field shortly before the game started, and the Editor of *Gol* is claiming damages from the Prefect for being incapacited from earning his livelihood by reason of the Prefect's neglect to keep the football field clear of cows.

The acting Governor's name is singularly prominent in the local Press at the moment, as His Excellency is also the defendant in an action for damages for assault and battery brought against him by a Beyoglou taxi-driver.

The acting Vali failed to put in an appearance in the Police Court on the first summons and his solicitor pleaded that as Governor-General of the City and Province of Istanbul, His Excellency was not amenable to the jurisdiction of the ordinary Courts. After an hour's deliberation, the Police Magistrate dissented from this view, holding that Mouhieddine Bey is no more than the Prefect of the City and, as such, is actionable in the lower Courts like an ordinary citizen, whereas as a temporary Governor-General he can lay no claim to either privilege or immunity.

The Magistrate warned the acting Vali's legal representative that, should the Prefect fail to put in an appearance in person after receipt of a further summons, he would be apprehended by warrant and brought to the Court under police escort. *Fiat justitia, ruat coelum.*

Turkey's Attitude Towards Foreigners.

Some few days ago, the correspondent of a Paris journal was fortunate enough to elicit from no less a person than the Turkish Foreign Minister his views on the relations of Turkey with foreign Powers. The interviewer, not unnaturally, began by questioning the Minister on the present trend of Franco-Turkish relations. The reply of Dr. Tewfik Rushdi Bey, although couched in the most courteous terms, certainly left no loophole for possible misinterpretations as to the Grand National Assembly's intentions with respect to one at least of France's interests in this country. France must be prepared to see, before long, every French educational establishment in Turkey having its doors closed for good. Every foreign school in the country was destined to disappear at an early date, but this decision would affect French nationals more than any others owing to the large

number of schools in Turkey run by *Frères* and nuns. Instruction in foreign languages would henceforth be in the hands of Turkish Professors and Lecturers, although at the outset the services of a few foreign lay teachers might be temporarily retained.

With respect to Turkey's general attitude towards France, politically speaking he could only say that it was a fundamental principle of Turkey's foreign policy to differentiate between no two Powers. All, to Turkey, were co-equal. The keystone to the whole political structure of Republican Turkey was the invincible determination to resuscitate and to foster the development, by every possible means, of the national instincts and sentiments of the people. For the first time in the history of Turkey, the love of fatherland had ousted and superseded the love of religion. It was, therefore, no more than natural that every effort would be made to eliminate every foreign influence which might impede the development of the policy which the leaders of the country had so much at heart.

Turkey had nothing to offer anybody, neither was she going to beg favours from anyone. They were essentially a homogeneous country and a people who did not hanker after accretions of territory (Turkey, added the Minister, like the United States, being the only Power in a position to make such a declaration without ambiguity). Any foreigner, whatever his national status, was welcome to establish himself on Turkish territory, provided always that he conformed to the laws of the country and did not aim at disturbing the social organisations of the fatherland.

Diplomatic and Consular Changes.

Mr. Walter Stanley Edmonds, First Secretary and Oriental Secretary to the British Embassy in Turkey, is being transferred to the post of British Representative at Rabat in the French zone in Morocco, to succeed Sir Andrew Ryan, who has gone to Jidda as British Minister to the Government of Hijaz and Najd. Mr. Edmonds has acquired the esteem and respect of a wide circle of friends during the many years he has spent in Turkey in various Consular posts. His still youthful, almost boyish, appearance is such as to make one lose count of the many years which have slipped by since he came out as a Consular Assistant. His departure and that of Mrs. Edmonds will be sincerely regretted by all those—and their name is legion—who have come into contact with them in either an official or social capacity. Mr. Edmonds' post at the Embassy will be filled by the appointment of Mr. James Morgan, the present Consul-General in Istanbul, who, likewise, has spent many years in various Consular posts in Turkey and who, like his departing colleague, also enjoys the distinction of youthful looks.

Mr. Morgan's present post will be occupied by Mr. Hough, at present Consul in Athens.

THE HIJAZ.

Jidda, May 22.

Pilgrim Ship on Fire.

A gloom has been cast over an otherwise successful Pilgrimage by the occurrence last night of an appalling tragedy, which might have been very much more serious than in fact it was. The King has lost no time in directing a searching investigation of the incident in all its aspects by a special Government Commission appointed to-day; and it would be well to suspend judgment until that Commission has had time to investigate and report. Meanwhile the facts would seem to be as follows. The French pilgrim-steamer, Asia, from Algeria, has for some time past been anchored in the outer anchorage of Jidda harbour awaiting its complement of passengers returning homeward after the performance of the Pilgrimage for which they had come so far in the same steamer. It was one of a dozen or so ships standing by in the harbour also awaiting their turn to depart; and it so happened that the

Moroccan and Algerian pilgrims, who arrived by the Asia, had, after the Pilgrimage, gone off to visit Madina, whence they will be returning to re-embark in a few weeks' time. The charterer of the vessel, naturally anxious to make as much use of her as possible within the period of her charter, had arranged to carry a party of pilgrims down to Hudaida and other Yaman ports and Jibouti. All arrangements had been completed, and during yesterday some 1,550 Yamani and Somali pilgrims had duly been embarked in readiness to sail to-day.

It would seem that about 7 p.m., presumably owing to the customary independent cooking operations of the pilgrims on board (though this fact is not definitely established), fire broke out in the fore part of the ship. Whether the seriousness of such an incident was appreciated or not, the fact is that the vessel about an hour later was in a blaze. No attempt appears to have been made to use the ship's pumps, and it is not certain whether they were in working order; while it also seems that no attempt was made to lower the boats at the first alarm and that it became impossible to do so later. It is actually stated, though such a statement can only be mentioned with a warning that it requires proper confirmation, that two boats were lowered at some time during the trouble and that the officers and crew got away in them, leaving the pilgrims to be rescued in other ways. Meanwhile distress signals were made and responded to by other ships in port, though it was some time before it was fully realised on shore that anything serious was amiss. By then boats had already put out from s.s. Arabistan, which lay nearest to the Asia, and from other vessels, and when the launches and lighters sent out from shore reached the scene the work of rescue had fortunately been some time in full swing and the Asia was in full blaze, though there were still a number of unfortunates on board caught between the devil and the deep sea. The night was fortunately windless, though the lack of wind made it more difficult for the sailing-lighters to reach the scene—a distance of some five or six miles at least from the shore by the channel through the reefs—and it seems that, while at a distance the ship had all the appearance of a blazing furnace, the bow and stern were not actually attacked by the flames and offered a temporary refuge to those awaiting rescue.

The captains of the Taif and Bulak of the Khedivial Line are specially mentioned as having boarded the vessel to get the pilgrims off, while the valuable services rendered by the Arabistan are greatly appreciated, as also the strenuous and heroic endeavours of other Europeans from ships and shore. About 10 p.m. the local Commandant of Gendarmerie arrived on the scene with the first launch from the shore and boarded the vessel by rope hung from the stern. The pilgrims were then marshalled to enter the sailing-lighters by climbing down the masts, each lighter being sent off ashore as it received a full complement. The Arabistan had already taken and accommodated 700 rescued persons, and other ships had received some 200 others, while about 500 were brought ashore, the first lighters arriving about midnight. A large number of the rescued persons had, of course, been taken from the sea, into which they had plunged to escape the advancing flames. It is also remarkable that a number of pilgrims were actually found asleep in various parts of the ship, entirely unaware of what was happening round them! And one man was rescued as he clung to the rails nonchalantly extinguishing with his fingers the flames that reached his garments—he had lost his reason and paid no attention to the shouts of those in the boats below ready to save him if he would drop; but he is now safe and under treatment.

Meanwhile, from the first moment of alarm until about midnight, the shore was in complete ignorance of what was happening. The King was duly informed on the telephone and issued instructions for elaborate arrangements for the reception of the survivors on shore. With but little delay the sub-Governor and the Mayor of Jidda, with a large number of official and unofficial volunteers, were on the spot organising the necessary arrangements. A field ambulance with stretchers and a liberal supply of bandages and medicines was soon on the spot; a large supply of bread, water-melons, dates, and water, with many volunteers for the distribution thereof, was brought to the quayside; but perhaps the most unique feature of the arrangements was a line of about a dozen tailors, each with a sewing-machine in front of him, who were kept busy all night making garments to replace those which had been lost or soaked with sea-water—and even winding-sheets for the dead. As soon as each party of rescued had received first-aid, food and clothing, motor-cars were in readiness to convey them to the local barracks, where by this morning 1,438 pilgrims had been safely accommodated for the time being as guests of the Government. The remaining 112 (it may be less, as the number of passengers embarked appears to have been less than 1,550) must unfortunately be assumed dead, most of them probably by drowning and the rest either burned or crushed in the panic that occurred on the outbreak of the fire.

Later, May 24.

Arrangements are being made for the repatriation of the rescued passengers, and the investigation of the circumstances of the disaster continues. Meanwhile the general impression here, based entirely on pilgrims' stories, of course, is unfavourable towards those in charge of the vessel; but, that being so, it is all the more necessary to reserve all judgment until an official report and an agreed account of the details of the incident are available. Some, apparently reliable, evidence has come forward that the stories of the victims of the disaster are exaggerated, and that to some extent the panic among themselves obstructed the crew in its performance of its duties. But it is not yet definitely known when the captain and crew left the vessel, while it is stated that many pilgrims bear on their hands the marks of having been beaten off the boats to which they were attempting to cling when in the sea. The French Legation, with which the greatest sympathy is felt, is doing its utmost to sift the matter to the bottom; and one can rest assured that in due course an accurate account will be available in place of the rumours and conjecture with which for the moment we have to rest content.

The Pilgrimage of A.H. 1348 (A.D. 1930).

It is unfortunate that in this unexpected manner the Pilgrimage of this year should have become memorable just at the moment when all concerned were congratulating themselves on an unusually small death-roll from normal causes. The total number of deaths during the five days of the Pilgrimage ceremonies is officially returned at only 123, due to sunstroke, old age, and other ordinary causes, out of a total attendance of approximately 150,000, including 81,000 from overseas. A large number of pilgrims has gone off to Madina by motor-car, camel, donkey, and on foot, and will in due course take ship from Yanbu. Several steamers have already left Jidda with considerable batches of those returning to their homes in Egypt, India, and the Dutch East Indies. The exact number of such ships up to date appears to be 17.

The King at Jidda.

In spite of his heavy preoccupations in connexion with the Pilgrimage King Ibn Saoud paid another short visit to Jidda on May 17, arriving at 7 a.m. and leaving again for Mecca at 7 p.m. The object of this visit was to give Sir Andrew Ryan, the newly-arrived British Minister, an opportunity of presenting his Letters of Credence, and the ceremony duly took place in the King's new residence (built during his long absence in Najd), which is known as "The Green Palace." The customary exchange of friendly and cordial speeches took place, and it is to be hoped that the ceremony marks the beginning of an epoch of genuine friendliness and co-operation between the Governments of Great Britain and of the Hijaz-Najd. Sir Andrew Ryan will find both the King and his officials

Digitized by Google

fully disposed to be friendly in advance, but there is no disguising the fact that many important problems still remain to be settled, for whose consideration we have now for the first time permanently on the spot a British representative of high rank and established reputation. It is to be hoped that the results will satisfy the aspirations of all concerned.

King Ibn Saoud on the same day also received M. Albert Londres, the distinguished French writer and journalist, who is here for a prolonged stay on behalf of *Le Petit Parisien*. Jidda has had the good fortune to have been visited recently by a number of representatives of the French Press; and French readers will doubtless soon be enjoying a full meal of Arabian fare.

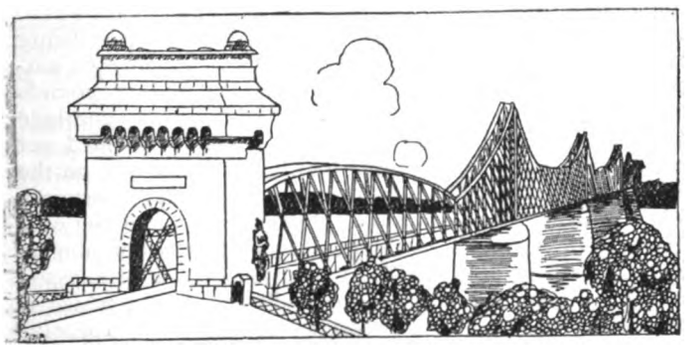
At the present moment the King is busy organising the return of the pilgrims to their various destinations and the dispatch of his large family to the mountain station of Taif, where the summer will be spent. As soon as he is free of these preoccupations, it is expected that he will pay a prolonged visit to Jidda before himself proceeding to Taif.

After the ceremony of the presentation of credentials above mentioned, the Foreign Minister entertained the British Minister and his staff and a number of local notables to dinner on May 17.

General News.

The French gun-boat, Baccarat, visited Jidda for a short stay during the past week; and the British sloop Clematis is expected here on June 2.

Mr. W. L. Bond, until recently Chargé d'Affaires here, is expected to leave early in June, when also Mr. Hope Gill is expected to arrive for duty at the British Legation.



ROUMANIA.

Bucharest, May 28.

Political Tension.

The last few weeks have been characterised by great political effervescence, which, however, when studied more closely, does not signify a great deal. The violence of the passions excited is characteristic of all political struggles in Roumania. The present trouble is explained as follows: The agitation began at the time of the great Liberal Congress. In spite of some dissension in the ranks of that Party, the position of M. Vintila Bratianu, as leader, has again been confirmed. He immediately expressed his firm determination to prevent the National-Peasant Party's Government from continuing the application of its political programme and its economic and financial measures, by all the means in his power. Hoping to convince the nation that the initiative of the Liberal Party still guided the main policy of the country, as in the time of his late brother, Ion Bratianu, M. Vintila Bratianu announced that he would induce the Regency to dissolve the present Government, which he considered nefarious. M. Bratianu was careful to emphasise the leading rôle played in the Regency by Prince Nicholas. He made no mention whatever of M. Saratzeanu, and his language in regard to the Patriarch was both scornful and offensive, almost amounting to a threat, for he seemed to hint that a Head of the State who allowed the country to be badly governed was not a fit person to be Head of the Church, and that he (M. Bratianu) would know how to bring this home, when the time was ripe. This attitude was hardly calculated to please the Regency Council.

Shortly afterwards M. Bratianu vehemently accused the Government of maintaining what the Liberals call "the equivocation of the constitutional question." In order to remind the public of the circumstances accompanying Prince Carol's renunciation of his rights of succession to the Throne the Liberal Party published a pamphlet. The Government considered that this pamphlet contained expressions which were an offence to the former Heir Apparent, father of the present King and brother of the Regent. Moreover, the text of the pamphlet flagrantly violated the regulation prohibiting all discussion or polemics on the subject of Prince Carol, and it was evident that it would excite the friends of the Prince to an immedate rejoinder, and the whole question would again be made a subject of public discussion and dispute. The official organ of the Government then published a *communiqué*, making it perfectly plain that the Government intended to enforce respect of the established constitutional order and that no controversy on the above question would be permitted. Thereupon the Liberal organ *Viitorul* started a campaign in which the personal character of Prince Carol was attacked. The Government had decided to abolish the censorship from which the Press had suffered so much since the War under the Government of M. Ion Bratianu, but it was obliged to take steps to prevent the sale of a newspaper containing plainly subversive matter. In taking this step the Government declared that it would do the same in regard to any newspaper of whatever party sympathies, which again attempted to open up this question, as it was to be regarded as closed to discussion. As it was not desired to impose a censorship, the only thing the Government could do was to prevent the distribution of the paper *Viitorul* when it ignored the Government *communiqué*. This led to scuffles between the police and the vendors of the paper, who were assisted by leading members of the Liberal Party in their attempts to distribute the paper. This somewhat undignified situation gave rise to ironical comment directed both against the Government and the Opposition.

The Visit of M. Titulescu.

The strained atmosphere was considerably relieved by the arrival in Bucharest of M. Titulescu, who was hailed with enthusiasm. The Roumanian Minister in London accompanied to Bucharest M. Loucheur, who had intimated his desire to see him during a visit to Roumania, which he is making in the course of a tour of the Near East. Sensation-hunters have tried to connect this visit of M. Titulescu with the existing tension in Roumanian politics, but it is a well-known fact that he had long wished to see M. Loucheur in Bucharest. M. Titulescu will stay only for a week in Roumania. He has been warmly welcomed by the Government, although many of its members have met him since his brilliant success in connexion with the question of the Hungarian Optants. He has been asked several times to visit Roumania in order that some expression might be given to the country's enthusiastic appreciation of his efforts on that occasion, but he has been prevented by the negotiations connected with Eastern reparations. M. Titulescu was given a very brilliant reception.

Miscellaneous News.

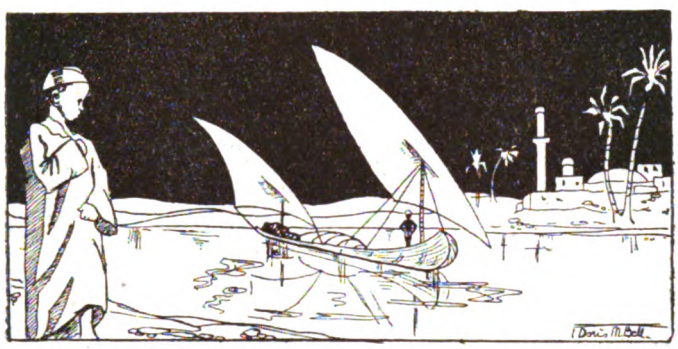
From the economic and financial point of view there is nothing new to report. The Budget revenues are coming in regularly in accordance with the estimates.

Parliament has ratified Roumania's adhesion to the Young Plan and is now busy with laws of local interest. The session will be continued into the first week of June.

The cool and rainy weather has so far done no harm to the crops in most parts of the country, and the harvest promises to be very good. On the other hand, torrential rains in some districts have caused serious inundations in the valleys of the Danube, Olt, Siret and Timesh, where

Digitized by Google

bridges have been swept away and vast tracts of country covered with water. The north of Moldavia, part of Bukovina, Transylvania and the lower Danube valley are under water; whole villages are surrounded and hundreds of houses have been destroyed, cattle have been carried away by the floods and fields laid waste. Over 4,000 people have been rendered homeless, and there are twenty deaths recorded. Bucharest itself did not altogether escape. A few days ago a cloudburst flooded the streets and squares, which for the space of some hours were converted into lakes and running rivers, so that traffic was interrupted, and the southern suburbs were inundated.



EGYPT.

Cairo, June 5.

The High Commissioner's Return.

The High Commissioner returned to Cairo last Friday and was met at the station by a very large number of notabilities, British and Egyptian. A most striking feature of the reception was the enthusiasm shown by Egyptians of all classes. Almost all the Ministers were on the platform; King Fuad sent his Grand Chamberlain, and many other influential persons were present. Moreover, the platform was lined by Egyptians of the lower classes and students, and there were vast crowds outside the station. Sir Percy Loraine was loudly cheered as he drove away from the station to the Residency. It was a striking manifestation of the friendly spirit which prevails in Cairo at the present time.

Yesterday the High Commissioner was received in audience by King Fuad, who also received the Egyptian negotiators for the first time since their return. King Fuad has been indisposed for almost three weeks now, and it is hoped that yesterday's reception shows that he has made a good recovery, although no official *communiqué* has been issued.

There were large receptions at the Residency, Cairo, the Consulate-General, Alexandria and the Consulates at Port Said and Suez on Wednesday, on the occasion of the anniversary of the birthday of King George V. At the Residency the High Commissioner and Lady Loraine shook hands with over 1,000 guests who filed past them in pairs.

The Summer Exodus.

The summer exodus is beginning, and all Europe-bound ships leaving Egyptian ports are full of Anglo-Egyptians going home on leave. Some of the foreign Legations have already left Cairo for their summer quarters at Alexandria, and it is stated that the Residency will move down about the third week of this month. Parliament will also rise about that time. Sir John Maffey, Governor-General of the Sudan, who arrived in Cairo towards the end of last week, sailed from Alexandria yesterday for England.

Cotton Difficulties.

The Government is at last beginnnig to realise the seriousness of the situation to which its intervention in the market has brought the cotton business. As long ago as the winter of 1925 the Government began to purchase cotton in an attempt to force up falling prices and, as it stated at the time, "to protect growers from speculators." In this procedure it was encouraged by almost all the native and European Press, as well as by all Egyptian and most of the European merchants. The only voices raised against the intervention were those of a few British merchants, and of the *Egyptian Gazette*, which has never ceased to point out the folly of such a step. Since the first intervention the Government has purchased enormous amounts and has succeeded in killing the demand for Sakellaridis cotton, the one main factor in the supremacy of Egyptian cotton. The Government has in store in Alexandria almost 3,000,000 kantars of cotton, a portion of which is as much as three years old, and is still buying. The price has certainly been stabilised—at the Government purchase price. Now that the new crop is looming on the horizon agitated appeals are being raised that the Government should not sell any of its stocks, and all those people who previously begged the Government to intervene are now condemning the method, and stating that they had always been opposed to it. The Minister of Finance has obviously realised the state to which the Government's methods have brought the industry, and is desperately searching for a way out. Mr. John A. Todd, an eminent economist, has been asked to come to Egypt to study the matter and advise the Government on a remedy, and the Minister has convoked a Committee of leading merchants and growers with the same object.

The first of this Committee's meetings was held on Wednesday, but nothing very helpful was suggested. Two of the solutions suggested appear to be nearly as foolish as the original mistake. Certain sections asked the Government to declare that it would not sell any of its stocks for three years. During that time, presumably, the cotton would remain in store, and at the end the Government would have spent nearly four million pounds in storage charges, interest, and depreciation. The other suggestion was restriction of cotton acreage. That would serve mainly to assist the Sudan and other cotton-growing countries, who would obviously not restrict their own output in sympathy. With nearly thirteen million pounds locked up in cotton and the prospect of having to continue purchasing—for if the Government suddenly decided not to buy any more there would be a general collapse on the market—the future is anything but rosy. It is certainly difficult to find a solution, but it would seem that the only thing to be done is a gradual sale at best prices obtainable and to "cut their losses." It is to be hoped that a lesson has been learned, although four million pounds, which is about the minimum loss possible, is rather an expensive price to pay.

Victoria College.

A very interesting evening's entertainment was provided at Victoria College, Alexandria, last Saturday when the boys gave some scenes from "A Midsummer Night's Dream." It was a particularly good performance and was noteworthy for the fact that out of the thirty or so performers, eleven nationalities were represented. Victoria College is gradually assuming an important position in the education of the Middle East. It is a British school with British masters, under the capable headmastership of Mr. Reed. There are, however, few British pupils, but the leading native families in Egypt, the Sudan, Syria, Trans-Jordan, Abyssinia, etc., send their sons there to receive an education based upon essentially British lines. These boys, whose careers may well be of the greatest importance to their respective countries, receive at Victoria College an education which is bound to have a most happy influence on their future life. In thirty or so years there will be among the leading men of nine or ten countries a leavening of some who have been educated at Victoria College and who will possess a broader vision, wider tolerance and larger sympathies than those who had been restricted to the much narrower educational establishments of their own lands. One may even say that in Victoria College is an institution which is materially contributing to the future welfare and good government of the Middle East.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 22.

Action.

It, I wrote last week, there is no help for it, but to keep on in the course of endowing India with parliamentary institutions more and more unfettered, there must be action, immediate and continuous, initiated and controlled by the Viceroy himself. As to the course itself, one may believe it to be a profound mistake, and even all in vain; we have all heard of the legions thundering past and India's bowed head; parliamentary and other institutions of an alien type would be but another kind of legion. One, then, may deplore that ever India was set in such a course; but, seeing that she has been, any well-wisher must desire that the best should be made of it. Desiring that myself, and knowing how sadly India, left to her own guidance, lacks the power to hold steadily on any course, I threw out that argument—that the Viceroy should have implemented his announcement of November 1 by calling all the political leaders together, and by keeping them in conference until what should be put forward at the Round Table Conference had been finally settled; had been so publicly and decisively settled, that there could be no going back upon the decision. Further, I argued, what should have been done last autumn, but was not done, should be done now. At the very hour when I wrote that, the Council of the National Liberal Federation was in session in Bombay, the outcome of that session being a statement issued to the Press over the signatures of Sir P. Sethna, Sir C. P. Ramaswamy Iyer, and the Hon. Mr. Natesan. This statement ends with these words: "In furtherance of this proposal, the Council urges the expediency of His Excellency the Viceroy conferring with leaders of Indian opinion for the purpose of removing the present tension and facilitating the success of the Round Table Conference."

Disunion.

Any such ancillary Conference as the Council of the National Liberal Federation had in mind would now be a much less representative gathering than could have been convened six months ago; for India has fallen deeper into disunion during the last six months. Even in the last month or two there has been a further disintegration. How serious this has been is shown by another document of this week—a statement reviewing the work of the Patro Committee of the All-Parties' Conference. The authors of this document say *inter alia*: "As far as the leading representatives of the Hindu Mahasabha are concerned, the position is that Pandit Malaviya has written to say that in his opinion the present time and atmosphere are not propitious for the discussion of those communal and political differences, and he would advise that the meeting be postponed." Pandit Malaviya wrote so, and the President of the Responsive Co-operation Party, Dr. Moonji, wrote: "I strongly feel that the present atmosphere in the country is not conducive to the success of the meeting. Rather it is directly antagonistic thereto. This is my honest opinion, and I have frankly placed it before you. Any decision arrived at at this meeting will not be binding on members of the Hindu Mahasabha."

The Winning Side.

The Indian politician, one notices, if he is not clearly on the winning side, shows a tendency to think as the man does who is sitting with cold, wet feet under a dripping umbrella. Dr. Moonji, before he came to the words that I have just quoted, wrote others to the Patro Committee, their intention being to inform it that his Party had decided to join the movement of civil disobedience started by Mr. Gandhi, and to inaugurate an intensive agitation for boycott of British goods, particularly British cloth. "You may have learnt from newspapers," he went on, speaking now only of himself, "that I have broken the Salt Law and read from a proscribed book; that, though I have not resigned from the Assembly, and am determined not to, I am personally engaged in the boycott movement . . ." He has not resigned his seat in the Assembly, but is for the boycott. Pandit Madan Mohan Malaviya *has* resigned, and is also for the boycott. Others will follow these two leaders. The tendency that I spoke of at the beginning of this paragraph, was what was at work in Mr. Mody, Chairman of the Millowners' Association in Bombay, when he said, in a Press interview on the subject of the Viceroy's appeal of last week: "It had to be recognised that a very powerful section of opinion in the country would have nothing to do with the Round Table Conference, and it was becoming increasingly difficult for those who had not associated themselves with that policy to keep up their faith and stand by their principles." The sight, to any Indian politician not thickly surrounded by his own followers, of any "very powerful section of opinion in the country" is a magnet drawing him, at no matter what sacrifice of his "faith" and "principles," to join that section. So all the more need of the Viceroy's leading the reasonable men. There is no other leader, and, if the reasonable men are not led, they will join the forces of unreason.

The Press Ordinance.

This *jejune* trait in the Indian politician is shown in a portion of that statement of the National Liberal Federation from which I have already quoted; the portion dealing with the recently promulgated Press Ordinance. "The Council recognises," runs the document, "that a certain section of the Press has recently indulged in inflammatory language; but feels that, instead of passing a drastic ordinance, Government should have warned the Press against such writings as seemed to it to go beyond the legitimate functions of the Press, and that, if such warning had gone unheeded, Government should have effectively set in motion the ordinary law of the land against the offending newspapers." That is calculated to take away the breath of anyone who has been following public affairs in India. For years that section of the Press has been pouring out inflammatory writings. For years the Government, but as one tries to stamp out with one's feet a fire that has already got too strong a head, have been trying to stamp out the evil by means of prosecutions in the Courts. Yet there you have a responsible body talking of a *warning*. If the authors of that precious piece of advice do not know how completely any mere warning would have been ignored, they can know nothing.

The Hindu Mahasabha.

"Any decision arrived at at this meeting," to quote Dr. Moonji's words again, "will not be binding on members of the Hindu Mahasabha." The most baleful influence at the moment, if it has not for long been so, is that of the Hindu Mahasabha. "It will be difficult," writes a Special Correspondent of the *Pioneer*, "to escape the conclusion that what the Mahasabha wants is not so much peace in the country but communal disharmony, engendered by jealousy that the problem should be solved by politicians with no bias except in favour of doing right." Take this also from a letter to the Editor of the *Pioneer* from the Raja Saheb of Kantit, Rijaipur. Having just spoken of the undertaking that no settlement will be arrived at by the Congress, unless it is acceptable to all communities, the Raja Saheb goes on: "This guarantee can bring no comfort to the Mussalmans, who painfully realise that any programme which has not the full approval of the Mahasabha leaders will not find favour with the Hindu community at large. Both the Pandit and the Mahatma know full well that their hold on the Hindu community will last only so long as they do not have differences with the Mahasabha. They have, therefore, decided not to tackle the communal problem."

The Communal Problem.

If that is true—that Mr. Gandhi and Pandit Motilal Nehru, at the virtual bidding of the Mahasabha, had decided not to tackle the Communal problem—it makes

Digitized by Google

another imperative reason for the Viceroy's gathering the politicians together, and leading them. The communal problem *must* be solved before the Round Table Conference. "It is our firm conviction," the Patro Committee states, "that a settlement of the communal question and the problem of minorities generally must be arrived at, in order to insure the maximum amount of agreement on questions of a purely constitutional character. Much as we deplore the general political situation in the country, we feel that the permanent issue as to the future Constitution ought not to be allowed to be obscured by it, and we also feel that the best interests of the country require that the issue should be boldly faced in India itself in a just and generous manner."

THE INDIAN STATUTORY COMMISSION.

Reference is made in another column of this issue to the first volume of the Report of the Indian Statutory Commission which was published on Tuesday. In the Introduction to this volume the declared goal of British-Indian policy is discussed, the Commissioners saying :—

Twelve years ago, in April, 1918, the Montagu-Chelmsford Report was signed. Its joint authors, in the first chapter of that document, declared that the announcement made by Mr. Montagu on August 20, 1917, to the House of Commons was "the most momentous utterance ever made in India's chequered history." This claim is justified. As the situation is reviewed after that interval it is manifest that this pronouncement supplies the governing conditions to be observed and satisfied by any and every scheme for India's future constitutional progress. Every circumstance was present which could add weight and authority to the declaration. Its terms were settled by a Coalition Cabinet—it is interesting to note that it was Lord Curzon's pen which inserted in the formula the reference to "responsible government" (Ronaldshay's Life of Curzon). The British Parliament accepted the statement as made not merely by the particular Administration then in office, but as a pledge and assurance offered to India by Britain herself. No challenge was issued by any Party in the State. After Mr. Montagu had returned from India with the Report drawn up by himself and the then Viceroy, indicating how the first step in implementing this declaration should be taken, the Government of India Bill of 1919 was introduced, and was passed by both Houses of Parliament without a division being challenged at any cardinal stage. The Joint Select Committee of both Houses appointed to consider the Bill (after it had been read a second time in the House of Commons by general consent) reported that the plan proposed by the Bill interpreted the pronouncement of August 20, 1917, with scrupulous accuracy. Among the changes which the Joint Committee recommended in the language of the Bill as first presented was an enlargement of the Preamble so as to reproduce as fully as possible the features of Mr. Montagu's declaration.

When the new Constitution was inaugurated, the Duke of Connaught, in the name of the King-Emperor, reaffirmed the policy of which the initial stage was then being taken, and successive Viceroys have reiterated the assurance. No responsible person has ever sought to repudiate the commitments thus entered into, and they have recently been reaffirmed and emphasised. We enter upon our task, therefore, upon the basis and assumption that the goal defined by Mr. Montagu represents the accepted policy to be pursued, and that the only proposals worthy to be considered are proposals conceived in the spirit of the announcement of August 20, 1917, and inspired with the honest purpose of giving to it its due effect. It is in this spirit and with this purpose that we frame our Report, and we can do no other, for we are appointed under a section of the very Act of Parliament which contains the Preamble.

It will be recalled that Mr. Montagu's announcement of August 20, 1917, was in the following terms :—

"The policy of His Majesty's Government, with which the Government of India are in complete accord, is that of the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire. They have decided that substantial steps in this direction should be taken as soon as possible, and that it is of the highest importance as a preliminary to considering what these steps should be that there should be a free and informal exchange of opinion between those in authority at home and in India. His Majesty's Government have accordingly decided, with his Majesty's approval, that I should accept the Viceroy's invitation to proceed to India to discuss these matters with the Viceroy and the Government of India, to consider with the Viceroy the views of local Governments, and to receive with him the suggestions of representative bodies and others.

"I would add that progress in this policy can only be achieved by successive stages. The British Government and the Government of India, on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judges of the time and measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities of service will thus be conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility."

The Preamble to the Government of India Act of 1919 included this statement and was as follows :—

"Whereas it is the decided policy of Parliament to provide for the increasing association of Indians in every branch of Indian administration, and for the gradual development of self-governing institutions, with a view to the progressive realisation of responsible government in British India as an integral part of the Empire :

'And whereas progress in giving effect to this policy can only be achieved by successive stages, and it is expedient that substantial steps in this direction should now be taken :

"And whereas the time and manner of each advance can be determined only by Parliament, upon whom responsibility lies for the welfare and advancement of the Indian peoples :

"And whereas the action of Parliament in such matters must be guided by the co-operation received from those on whom new opportunities of service will be conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility :

"And whereas concurrently with the gradual development of self-governing institutions in the Provinces of India it is expedient to give to those Provinces in provincial matters the largest measure of independence of the Government of India which is compatible with the due discharge by the latter of its own responsibilities."

In this connexion the Commissioners say :—

These, then, are the conditions, deliberately avowed and unswervingly maintained, under which Parliament is about to enter upon a re-examination of the vast Indian problem. These conditions have a double aspect, and as there is a tendency for some commentators to confine attention to the one point of view, while critics of a different school concentrate solely upon the other, we feel that it is of the highest importance at the outset to emphasise the fact that the Montagu declaration of 1917 and the Preamble of 1919 embody both.

On the other hand, "the progressive realisation of responsible government in British India as an integral part of the British Empire" is the fixed object to the attainment of which, in co-operation with the Indian peoples themselves, British policy stands pledged ; the obstacles in the way (and we shall not fail to give a full and candid account of them) cannot be treated as defeating that object, or as affording a discharge from its pursuit. They are of so formidable a character that no opinion as to what should now be done is worth anything at all until they are duly appreciated ; but whatever the obstacles, the object stands as the declared goal of British-Indian policy.

On the other hand, it is equally part and parcel of the pronouncements of 1917 and 1919 that progress in the attainment of this avowed object "can only be achieved by successive stages" ; that "the time and manner of each advance can be determined only by Parliament, upon whom responsibility lies for the welfare and advancement of the Indian peoples" ; and that in the development of this purpose, the decision as to the immediate future must largely depend upon a just estimate of the results and consequences of the steps already taken.

We are well aware that many Indian publicists look askance at the efforts of others to give an account of these matters, however straightforward and sympathetic that account may be. The purely British composition of our own body roused resentment in many quarters in India—resentment which we did everything in our power to allay, first by seeking the co-operation of Indian Committees (for whose aid we are deeply grateful) and later by suggesting the calling of a Representative Conference after this Report and the Report of the Indian Central Committee have been made and published. We have learned enough of India to recognise and to respect the acutely sensitive pride of her sons. But we trust that in the pages that follow, inspired as they are by a desire not only to discharge our statutory duty to Parliament but to serve the cause of India's political progress, our Indian fellow-subjects will recognise that candour and friendship are close allies, and will find an earnest of that good will towards India as a whole which, we are well assured, will govern all the impending discussions. Our own task is not to decide, but to report to the King-Emperor whose Commission we hold and to the Parliament of which we are members. In the steps that will follow before the decision is reached there will be full opportunity for the contribution of the views of every section of responsible and representative opinion in India.

THE CALCUTTA DINNER.

A severe indictment of the policy pursued by Mr. Gandhi—"the Spurious Saint of Gujerat"—was delivered by the Marquess of Zetland, presiding at the twenty-third Calcutta Dinner at Grosvenor House on June 3. The Rev. J. A. Graham, the founder and principal of the Kalimpong Homes for Anglo-Indian Children was the guest of the evening, and there was a record attendance of past and present residents.

Proposing the toast of "The City of Calcutta and our Guests," the Chairman said that the Calcutta dinner had a special characteristic of its own. It brought together

Digitized by Google

men who, however greatly their lot might differ in other respects, had the great bond in common of having lived and toiled side by side—in many cases for the best part of their active careers—as citizens of a remarkable city, the embodiment of all those solid characteristics with which Providence had endowed the British race, and abiding monument to the colonising genius of the British people. But good Ditchers though they were, their interest in India was not restricted to Calcutta. They could not close their eyes to all that was going on throughout the continent. India was seething with unrest Hatred and a spirit of violence stalked abroad among the people like grim spectres in some ghastly nightmare, leaving a trail of misery in their wake. On whom lay the blame? Surely not upon the Government or the people of Great Britain? He at least had no fear of the verdict, when in due course judgment was given at the bar of history. What could the Government or the people of Great Britain have done more? One could not blot out the history of the past 200 years as if it had never been. Where would have been the India that they knew to-day without the organising ability, the protecting arm, the wise and efficient tutelage of Great Britain? It would simply not have existed. Had they been too slow in transferring responsibility for their good government to the people themselves? Again he said surely not. And yet the great and generous gestures which we had made had been rejected with contumely by Mr. Gandhi and his Congress Associates.

He had long been satisfied, Lord Zetland continued, that Mr. Gandhi was consumed with that false pride which caused a man to reject the loaf freely offered in the hope that he might wrest even a crumb by force. Was he sincere in posing before the world as the apostle of non-violence? Had India any cause to be grateful to Mr. Gandhi. Let the world judge. He had deliberately and of malice aforethought undermined respect for law and order. He had taught the people to cast their offerings upon an altar raised of anarchy. In his blind and insensate folly he seemed to have forgotten that the essential basis of all organised society is a rigid respect for law and that the necessity of enforcing it which faced the Government of India to-day would equally present itself to any Indian Government that might come into existence in the future. At a time when all parties in Great Britain were prepared to examine in a sympathetic and generous spirit the demands put forward on behalf of India for a further advance in the direction of self-government, Mr. Gandhi had succeeded in arousing in the minds of many people in this country grave doubts as to the wisdom of further concessions, and in some quarters a demand for a drastic curtailment of the concessions already made. He did not agree with those who took the latter view.

Those who really thought it possible to get back, as some suggested, to the pre-War position merely showed that they had not the smallest conception of what was or what was not practicable in India to-day. To do so would be to display themselves to the world as a people bankrupt in statesmanship and altogether unworthy of the high task which Providence had laid upon them. Nor was it any such craven policy that Lord Irwin had been sent to India to carry out. And to denounce him for carrying out with conspicuous courage and in the face of almost unprecedented difficulties the policy he was charged by all parties to pursue was not only grossly unfair to a great public servant, but doing a great disservice to the country. To suggest, in the face of the measures which the Government of India had taken, that the Viceroy was afraid of vindicating the law was simply silly. The responsibility for the recent disturbances and the appalling loss of life rested upon Mr. Gandhi and not the Government; he and his fellow revolutionaries were as blood-guilty as if they had struck down those who had perished.

It was pleasant to turn, in conclusion, from the spurious saint of Gujerat to the real saint of Kalimpong, Dr. Graham, to whose work as the founder and principal of the Kalimpong Homes he paid a warm and appreciative tribute.

The Rev. John Graham, responding, said he took his presence there as a mark of Calcutta's approval of Kalimpong and what Kalimpong stood for. The existence of Kalimpong gave eloquent refutation of the charge that Calcutta men were merely concerned with the making of money and the prospect of an early retirement. The toast of the "Chairman" was proposed by Sir Robert Watson-Smyth.

CORRESPONDENCE

"INDIA—PEACE OR WAR?"

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In his latest volume, "India—Peace or War?" Mr. S. C. Ranga Iyer continues to preach a red-hot nationalism while disclaiming any association with the extremist section of the Swarajists. The moderation which he professes, however, does not seem to exercise any restraint upon his political demands which embrace not only Home Rule for British India with control of the Army, but Dominion Status for India as a whole—including the Indian States—under a central All-Indian Supreme Government.

Mr. Iyer's "moderation" is further examplified in his attitude towards the Ruling Princes. Take away, he says, the protecting arm of Britain from these mediæval Maharajas and their subjects will overthrow them in a single week! Unfortunately for Mr. Iyer, however, and for all such mischief-makers, the Report of the Butler Committee has cut the ground from under their feet.

Dealing with the internal organisation of the Indian States, as well as with their relations with British India and the Crown, this Report declares that, although for long the States stood upon their ancient ways, yet they have now been swept by the breath of the modern spirit. On all sides, the Butler Committee found, there was a desire for improvement in the administration emanating from the Princes themselves no less than from their subjects.

The mediævalism at which Mr. Iyer scoffs was not apparent to the Committee whose Report concludes by saying, "we confess that our imagination is powerfully affected by the stirrings of new life and new hopes in the States, by the progress already achieved and by the possibilities of the future."

The attitude of Mr. Iyer towards the Indian States is common to the Swarajists as a whole and contrasts unfavourably with that of the Princes towards their fellow-countrymen in British India. At the meeting of the Chamber of Princes in New Delhi in February 1929 the Maharaja of Patiala, moving a resolution declaring the necessity for the maintenance of the British connexion, said, "We (the Princes) desire to make it clear that we have always expressed our sympathy with the aspirations of British India which we regard as legitimate. . . . Our one desire is to cement our relations with British India consistently with the due discharge of our duty to our States and our treaty obligations with Britain." Another speaker said: "We Princes have developed a sense of partnership in the Empire. . . . We have stood by our word in the past and we have built up a proud tradition of the highest regard for the sanctity of solemn pledges."

It would seem, therefore, that our memories require refreshing in these matters so that we may not forget the loyal attitude of the Indian Native Princes, nor the fact that where they lead their seventy-two millions of subjects will follow.—I am, etc.,

A. E. RITCHIE.

June 3. 19, Holkes Street, Keighley, Yorks.

At a meeting of the East India Association to be held on Thursday, June 19, at 4.30 p.m., at the Caxton Hall, Westminster, Professor Rushbrook Williams, C.B.E., will read a Paper on "Indian Unrest and American Opinion." The Right Hon. Viscount Burnham, G.C.M.G., will preside and a discussion will follow.

RUBA AL KHALI.

On June 2, at the Æolian Hall, Sir Arnold T. Wilson read a paper before the Royal Geographical Society entitled "An Account of a Journey into Ruba al Khali, the Southern Arabian Desert, by Bertram Thomas." Sir Arnold recalled the fact that Mr. Bertram Thomas, who had been Financial Adviser to the Sultan of Muscat and Oman for some five years, had already, in 1928, travelled in Oman through practically unknown country, from Sur to Dhofar, and that the knowledge gained in this 1928 journey by Mr. Thomas strengthened him in his determination to penetrate as far as he could into the dead heart of the Arabian Continent - an area as large as France and Spain combined, which had hitherto baffled the enterprise of geographers, travellers, and historians from the days of Ptolemy onwards.

Mr. Thomas arrived at Salalah, on the southern coast, on January 8 of the present year, in company with the Sultan of Muscat and Oman, who helped him considerably in organising the expedition, particularly by speaking to the headmen of the Al Kathir tribe, on whom the explorer's hopes were centred.

Mr. Thomas left Dhofar on January 11, with his Secretary, Ali Muhammad, his servant who had been with him on the 1928 journey, and nine baggage animals. He had further an escort of 28 mounted Badus. They soon crossed the crescent plain of Dhofar and turned into the Gurzaz, one of the few great wadis giving access to the Qara mountains. They went on, over the Hazal Pass, saw some rock settlements of the Al Kathir by Mistau, and proceeded through Al Qatan—the point that marked the limit of previous European penetration (the Bents reached it in 1894-5). On January 13 the party started off from Aiyan, a well-known water-hole of the Bait Kathir in the upper course of the Wadi Ghudun. Before them was a panorama of red rolling country, in which grew the frankincense tree. This point, which marked the northward limit of the settled tribes—the Qara, Al Kathir, and Shahara—also marked a geographical division, for in front of them was a great uninhabited wilderness of sandstone steppe sloping down a six days' march to the sands. The country passed could, therefore, be divided into (a) a maritime coastal plain, (b) seaward mountain slopes cloven by deep and wooded wadi rifts and spanned by stony meadows, (c) the divide (Qatan) averaging 3,000 feet, and (d) Najd, the sandstone steppe.

Leaving the region of the frankincense tree, which is not planted, but grows wild, they trekked up by the Wadi Dhahair, the Wadi Haluf, and the Wadi Ghudun. Then, on January 15, they left Al Khurbah and struck, due north, across a desolate plain—so barren that a Badu said that "the sword of God had been upon the dira for fourteen years."

At the junction of Wadi Ghara with Ghudun, they shot their first antelope, whose flesh the Badus rate higher than that of any other beast. Changing their course for N.E. they made for Shisur, which water-hole, the nearest to the great sands, lay across a black flint-strewn plain, black and steamy with mirage.

Now, however—January 19—Mr. Thomas's escort declared that Shisur was the limit imposed by their undertakings and justified by prudence. A section of them were prepared to take a four days' water supply at Shisur and make a sortie into the sands in the same longitude; they scorned, however, his plan of reaching the central sands of Ramlat Hibak reported to be ten days' march north of Shisur. They said (*inter alia*), what was quite true, that most of their camels were utterly unfitted for the sands. A change of plan, therefore, was necessitated, and Mr. Thomas hit upon the idea of a journey along the fringe of the sands for a hundred miles to explore the wadi system of Umm al Hait, running north-eastward from Shisur to a reported oasis of Mugshin, and thence making a dive into the sands.

This scheme, which was adopted only after great difficulties, meant cutting down Mr. Thomas's baggage, and involved his tent, all but the indispensable part of his food stores, a special Natural History box, and most of his medicine case.

At Shisur were the ruins of an old fort, and the Badus asserted that in the surrounding plain were faint traces of dark furrows as though it once had known the plough. Travelling now N.W., Mr. Thomas on January 20, for the first time, caught sight of the great sands. He halted the night near the junction of the Wadi Ghadun wtih Umm al Hait, where a blinding sandstorm sprang up—blowing, not from the sands but towards them. This fact would appear to show that the formation of southern Ar Rimal at least regionally is the blown sands from the distintegrating surface of the steppe.

On they went for the next few days, on a north-easterly line, between the undulating ridges of the great sands on their left and the flat sweeping steppe of the Najd on their right. Water now became an urgent need, but at last, on January 25, they reached Mahtirgat, where they turned due north and entered upon rolling sand dunes of very soft and yielding sand. All the camels except those of the Rashidi were terribly troubled by this loose sand. Suddenly, however, the going improved, and, wrote Mr. Thomas, "for the first time during the last ten days of a journey down the imperceptibly sloping steppe, a slight descent could be detected. Before us an unending procession of giant *ghaf* trees, the famous Wadi Mugshin suddenly presented itself. Beyond them an ocean of reddish sand—Ar Rimal. Astride them two great sand dunes, Birsa and Mursaudid, standing as though a gateway to the mysterious ocean, like the Pillars of Hercules."

Wadi Mugshin, where Mr. Thomas spent the night of January 27, was to the Badu a jinn-infested spot, where any normal deed, such as feeding camels by hand, or killing a hare, would incur some dark penalty. But having reached the spring of Al Ain, he had no option but to start on his return journey. But with seven men he made a two days' dive into the sands, coming back, after travelling in nothing but an ocean of billowing sand, to the main camp by the dune of Mursaudid.

On his return journey to Dhofar, made by a different route, (via Danka) he collected numerous birds and fossils, and made meteorological and astronomical observations.

Summing up, Sir Arnold Wilson said that Mr. Thomas had demonstrated that the whole coastal area from Longitude 51 to 54 was drained inland by a single system of wadis through a vast sandstone steppe, falling from south to north and from west to east, and he suggested that during the pluvial—prehistoric—period, the area now occupied by the sands may have been a great inland lake. The fossils, rock specimens, skins, birds, and beasts, and a skull collected by Mr. Thomas had been sent to England and were being examined by experts; and further data had been collected of great value in regard to the tribal and racial problems of this area.

This journey, together with that of 1928, constituted, said Sir Arnold, "an achievement of first-class importance in the realm of geographical discovery. They both cover

CENTRAL ASIAN SOCIETY
(in which is incorporated The Persia Society.)
Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published
The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.
Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

Digitized by Google

ground hitherto almost wholly unvisited by any European, and unmapped except from the sea. Mr. Thomas's reports are the first authentic record of the nature of a tract of country nearly as large as England, which has been for over a century a subject of active speculation, and of which no sort of record previously existed. It is much that he should have succeeded in making these journeys: it is more that he should have done so in his capacity as the right-hand man of the territorial ruler, H.H. the Sultan of Muscat. It is above all creditable that he should have equipped himself so thoroughly for his task as to be able to fix his position from day to day with a sextant, and to collect single-handed so much scientific information. The geographical problem of this part of the Arabian Continent are not yet completely solved, but the first and greatest step has been taken towards the final elucidation of the "Riddle of the Sands."

After the lecture, Professor Seligman gave his opinion on the skull which had been found in a rock-cave by Mr. Thomas. It was definitely Semitic, not Hamitic; nor was it pre-Islamic, but fairly modern. The tribes which Mr. Thomas had thought to be non-Arab, moreover, were probably Semites—disappointing though this conclusion might be!

Squadron-Leader Keith, who had travelled with Mr. Thomas in Oman, spoke of his invincible optimism and determination, of his knowledge of the tribes and of his general authority.

Group-Captain Courtney referred to the possibility of connecting Basrah and Aden by air. Already the R.A.F. at Aden had established a chain of landing grounds from Aden as far as Dhofar: there was actually one at Salalah, whence the R.A.F. had gone 100 miles inland and had seen the outer sands of the Ruba al Khali.

Sir Charles Close, who presided over the meeting, paid abundant testimony to the achievement of Mr. Bertram Thomas, who had made an immense contribution to geographical knowledge. It was particularly gratifying to know, moreover, that he had acted with the considerable help of the Sultan of Muscat and Oman, who had really made the journey possible.

PERSONAL AND GENERAL

TO-DAY

June 12, 1930 (New Style).
May 30, 1930 (Old Style).
Muharram 15, 1349 A.H., of the Muslim Calendar.
Sivan 16, 5690, of the Jewish Calendar.
Khordad 22, 1309, of the Persian Calendar.

The Maharaja of Rajpipla arrived at the Savoy Hotel last week from Windsor.

Colonel G. F. H. Brooke, D.S.O., M.C., has been appointed Commander, Cavalry Brigade, Egypt, with effect from August next.

Sir Stanley Jackson, Governor of Bengal, accompanied by Lady Jackson, left India on June 5 for England on four months' leave.

Lord and Lady Dickinson left London on June 3 for Geneva and Bagnolle de l'Orne, and will not return to England before the beginning of July.

Mr. R. H. Hoare, C.M.G., who has been Acting High Commissioner in the absence of Sir Percy Loraine, left Egypt on May 31 for two months' leave in England.

Effat Bey, the newly appointed Egyptian Minister to Persia, has arrived in Teheran and has entered upon his duties.

Sir Frederick and Lady Rowlatt sailed from Port Said on May 25 *en route* for England, where they will spend the summer months.

A Knighthood was conferred on the Treasurer of the Palestine Government, Mr. Stewart S. Davis, C.M.G., in the recent birthday honours.

Captain and Mrs. McCallum returned at the end of last month to Gezira from their motor trip in Sinai, Palestine, Syria, and Trans-Jordan. They expect to remain in Cairo until they leave for Italy early in July.

Mr. Edmonds, British Chargé d'Affaires at Angora, gave a garden party on the occasion of the King's birthday on June 3. Many prominent Turks and foreigners attended.

Ex-King George of Greece, attended by Major Levidis, arrived in London last week, staying at Brown's Hotel. Queen Elizabeth of Greece, after completing her cure at Brides-les-Bains, will join him in July.

Colonel (temporary Brigadier) F. D. Logan, C.M.G., D.S.O. (late Royal Artillery), Brigadier in charge of Administration, the British Troops in Egypt, has been made a Commander of the Order of the Bath.

Mr. W. H. B. Mack, until recently Assistant Director of the Egyptian Department at the Foreign Office, who has been temporarily appointed to the Residency, Cairo, owing to the present shortage of staff there, left London on May 28 *en route* for Egypt.

To-day (June 12) at 4 p.m., Professor John Garstang will give an account, at the sixty-fifth Annual General Meeting of the Palestine Exploration Fund, of his recent excavations at Jericho. The lecture, over which Dr. H. R. Hall will preside, will be given at the Rooms of the Society of Antiquaries, Burlington House, W.1.

An exhibition of Mr. Charles W. Cain's etchings of the East (India, Burma, Persia, and Mesopotamia) is being held at Greatorex' Galleries, 14, Grafton Street, Bond Street, W.1. This exhibition, which was opened by Sir John Ferguson, K.B.E., M.P., yesterday, will be open until July 5.

Princess Beatrice was present at an historical Egyptian *matinée* performance which Lady Newnes arranged on June 3 at the Hippodrome in aid of the Friends of the Poor and the Flinders Petrie Excavations, British School of Archæology. The music of various periods was collected and arranged by Miss Julia Chatterton on replicas of ancient Egyptian instruments and was conducted by Ticciati.

THE WEEK AT HOME

London, Tuesday Morning.

Whitsuntide.

In the South of England, at all events, it has been a glorious Whitsuntide, full of that rare enchantment which June provides more fully than any other month. At last we have had a touch of summer, the fields all lit with sun and shadow, the smells of the earth borne by a cooling breeze. There is a magic in such weather, not hot enough to cause inertia, but warm enough to awaken the fairies of musing.

Practically everyone has tried to find happiness out of doors. In this search some need a motor-car, others a garden; some fly out of themselves, others dig deeper into themselves. But all, young and old, have been resolved to enjoy the summer sun. And in truth the days, from dewy morning till twilight, have been delicious. Would that such weather could last till October!

The End of a Ministry.

With the change over of Mr. J. H. Thomas to the Dominions Office, that strangely hopeful device known as the "Ministry of Unemployment" comes to an end. It is not so much that Mr. Thomas was unsuited for such a post, but rather the circumstance that no one man could deal adequately with the terrible problem of unemployment that influenced the Prime Minister in the abolition of the post.

By the changes that were made last week the Government on the whole is probably strengthened. To the Dominions Mr. Thomas assuredly will bring a *joie de vivre* which can scarcely be said to exude from the distinguished Fabian who is still to control the Colonies. The appointment of Mr. Vernon Hartshorn to Lord Privy Seal is an excellent one. One is sorry, however, to see that the charming Mr. Noel Buxton (who was made a Peer a few days ago) has had to give up the Ministry of Agriculture and Fisheries, in which he is succeeded by an expert politician in Dr. Addison.

The Crumbling of Free Trade.

One need not take seriously all the attacks on Cobdenism made by the popular Press to realise that the walls of the citadel of Free Trade are crumbling almost daily. The Nottingham by-election must primarily have turned on Mr. Snowden's folly in taking off the duties on lace; in many Labour quarters, indeed, there are signs that, were it not for embarrassing the Party by misrepresentation at the hands of the "Empire Free Traders," hundreds of working men would be ready, even anxious to scrap the shibboleths of Free Trade.

Most significant of all, perhaps, is the news, last week, that the Manchester Chamber of Commerce has voted, by nearly a three to one majority, against "the policy generally known as Free Trade." That Manchester, of all places, should thus have renounced Cobden, or at any rate the policy which is connected with Cobden's name, must be bitter news indeed to the Free Trade doctrinaires, particularly those in the Cabinet. Without any question, public opinion is moving away from Free Trade, though whether in the general direction of "scientific Safeguarding" or of Empire Free Trade, it is difficult to discover. It is easier to point out the flaws in our present fiscal system than to discover their remedy.

Cambridge's New Chancellor.

It is difficult to see what more excellent choice Cambridge could have made for her new Chancellor. Not even his bitterest opponents will deny that, outside political life, Mr. Baldwin has much distinction. He is distinguished in his very plainness, in his taste, and in his philosophy. An Englishman and a Cambridge man to the core, he thrills to the smell of English earth or a Light Blue victory in the Boat Race.

His roots, religious and personal, are in English earth. Not for him any running after new foreign gods; the old classical values are good enough for him. There are in him a homeliness and a stateliness which appeal alike to scholar and peasant.

The Test Team.

It is commonly said that cricket was never so popular as it is now, and there is overwhelming evidence that the Test team, which goes into the field at Trent Bridge next Friday against the Australians, is being very widely discussed. Unfortunately, however, this fact is partly due to the competitions, with cash prizes, which have been instituted by papers.

As a matter of fact, cricket does not hold the same place in the country as it did. In the counties, the only teams which show satisfactory balance sheets are those which play lively cricket; the dullness of modern batting is indisputably the cause of a decline in the numbers of spectators. And in the villages it is, I think, more difficult than it was before the War to raise a side. There are now so many spurious and trumpery counter-attractions. In ordinary Club cricket, the problem is becoming increasingly complicated by financial considerations. Before the War, cricket was a moderately cheap pastime; now, largely owing to increased rates for grounds, it is very far from that.

Modern Literature.

The judgments of *litterateurs* upon contemporary literature are extraordinarily varied. Certain critics are constantly hailing new works of genius—Mr. Baldwin referred the other day (though I think sardonically) to the critics of the Sunday papers who are always finding immortal things—but others seemingly deny any very considerable merits to modern literature. Professor J. W. Mackail, for instance, an extremely good judge, suggested a day or two ago that if eight lines of A. E. Housman were weighed against all the literature produced by the War, the Cambridge classical scholar would tip the scale.

The truth is that literature, like all the other arts, is always a product of the age. In recent years we have been restless, if not drifting. There are now signs that some anchorages are being secured, and, that being so, and experimental techniques having crystallised into individual and adequate means of expression, we may expect again the production of works on a large scale comparable with those of the serener past. As for the critics, the blessing of the new just because it is new is as vulgar as the blessing of the old just because it is old is unenlightened.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Anglo-Persian Report.

The dividend statement of the Anglo-Persian Oil Company, to which I referred last week, gave the main features of the greatly improved results of the past year. The report, which is now forthcoming, gives the interesting information that in the last month of last year the production of crude oil from Masjid-i-Suleiman was supplemented by the first delivery of oil from the Haft Kel field. The pipeline linking the latter field with the main delivery lines to Abadan was completed in November. A very hopeful reference to the new field is made in the report. The extent of the proved structure and the high productivity of the wells indicate, it is stated, that this field will play a very important part in the company's future production programme. Active progress continues with exploratory work in other areas in Persia, and it is to be assumed that further information on this subject will be forthcoming at the approaching general meeting. The only other item in the report that calls for reference is the statement with regard to Albania, where drilling has unfortunately failed to reveal any new oil structure.

The Egyptian Cotton Position.

A variety of factors have combined to make the cotton position in Egypt an exceedingly difficult problem for the Government. There is first of all the increasing depression in the piece-goods market which, of course, means less demand and lower prices for cotton. Then Egypt's crop last year was much larger than was expected, totalling 8,329,454 kantars, and the carryover will amount to at least 2,000,000 kantars. Finally, at a time of falling prices, a crop of about 9,000,000 kantars is looked for this season. The Egyptian Government has been intervening in the market for months past with a view to the maintenance of prices, and the result is that a very large sum has been locked up in the purchase of cotton, and as the object aimed at has not been attained and looks unlikely to be realised in present circumstances, it is not surprising that the advisability of the continuance of intervention in the market should have come to be questioned. It is very clear that whatever is done the purchases must result in a substantial loss, for cotton stored for a long time tends to deteriorate, while if the Government abandons its policy of supporting the market and endeavours gradually to liquidate its holdings the consequent effect on prices will be obvious. It is difficult to see how the policy of cotton purchases can be pursued much further in any case, for, as I have pointed out, a very large sum has already been locked up in cotton.

The Real Solution.

It is unfortunate for Egypt that this problem should have been forced upon her, so to speak, by the pressure of extraneous circumstances. If world conditions in the cotton trade had remained normal no difficulty would have been experienced in disposing of all the cotton that Egypt can produce. Unfortunately the Egyptian authorities have fallen into the error of believing that the world cotton crisis would not be a thing of long duration, and that it would therefore be sound policy to support the market and, by thus maintaining prices, enable the producers to obtain an adequate return. It is evident now that the immediate future for cotton is extremely uncertain, and it is clear that Egyptian policy, to be effective, must be framed on that basis. There is no question that the attempt to establish unreal values for the commodity has prejudiced Egyptian cotton to some extent in the eyes of buyers in this country. For the re-establishment of Egyptian cotton in the market two things are urgently necessary, an improvement in the quality of the cotton, and a reduction of the costs of production which will make it possible for the growers to obtain a reasonable profit at the existing market prices. If the authorities concentrate on these two points they will be dealing with the root of the problem. The attempt to solve it by interference with prices is a step which can only make the solution of the problem more difficult the longer it is pursued.

Burmah Oil Company.

In his speech at the general meeting of the Burmah Oil Company, Sir John Cargill confirmed expectations as to the principal causes for the great improvement in the company's profits for the past year. These causes are immunity from price cutting conditions in the kerosene market which ruled between September, 1927, and June, 1928, economies in working costs and benefits resulting from changes in the company's marketing arrangements in India, and a considerable increase in income from interest on loans and dividends on investments. As Sir John Cargill indicated, the company is benefiting from the conservative policy pursued throughout by the Board, and in view of the position in India and the situation with

regard to the raw material itself there will be no one to cavil at the advisability of the continuance of a conservative policy. India, Sir John Cargill pointed out, is probably feeling the effects of the economic depression more than most countries, because of its preponderatingly agricultural habits, but it is satisfactory to learn that neither this factor nor the political unrest there has so far affected the outlet there for the company's products.

Oil Production and Consumption.

Naturally the vexed question of oil production was referred to by Sir John Cargill. While diverse views are held as to the relation of production to demand there is, he pointed out, general agreement that the over-production of recent years is unjustified. Unfortunately, as the statistics for the past year show, the efforts made to regulate production have not yet achieved the desired end. Thus while the world output for 1928 was 187,674,434 tons it was 210,656,760 tons last year for which America and Venezuela must be held mainly responsible. The American production was 141,992,032 tons as against 127,152,006 tons, while the Venezuelan output rose from 15,590,000 tons to 20,367,105 tons. It is necessary to emphasise the futility of producing more oil than is needed by the market; prices are unnecessarily depressed and the surplus oil has to be stored, whereas it should be left in its natural storage until it is really required. From what he said it is evident that Sir John Cargill is not too hopeful at the moment as to the prospects for the restriction of production. As there is only too good reason to know, the history of efforts to restrict production of other commodities has not been too happy, but it must be remembered that oil is in a different category to commodities of which the supply is inexhaustible.

Suez Canal Dues.

At the general meeting of the Suez Canal Company the President, the Marquis de Vogüé, announced a reduction as from September 1 next of 25 centimes in the dues on loaded vessels, bringing the rate down to 6.65 francs, while from the same date vessels in ballast will pay half this rate as against a reduction of 2.50 francs on the rate for loaded vessels. This concession will be very welcome to shipowners, who however could scarcely have been surprised if it had not been made on the present occasion, for while the past year was an extremely satisfactory period for the company, the statistics for the current year have shown that the Canal traffic is beginning to suffer severely from the prevailing economic depression. For the four months ended April 30 the tonnage of the shipping transiting the Canal showed a falling off of 407,351 tons as compared with the same period for 1929. The Marquis de Vogüé indicated that it is thought likely that the tendency for the traffic to decline will continue this year, and pointed out that among the factors that will affect the Canal are the poor Australian wheat crop and the unsettled conditions in India. A distinctly hopeful note with regard to the outlook was struck by the Marquis de Vogüé, who suggests that the existing crisis may be of short duration. There are, as a matter of fact, several indications at the present time that point to the bottom of the depression having been reached, and we can only hope that the recovery, when it comes, will be rapid.

COMMENTATOR.

CORRESPONDENCE.

"TOMBEKI."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Can any fellow-readers of THE NEAR EAST AND INDIA inform me where "Tombeki" can be obtained in this country?

I have tried all the likely sources of supply—including most of the London dealers in Oriental tobaccos—without success.

After smoking, and vastly enjoying, a Narghile for several years, I miss it now.

I shall be very grateful for any information.—I am, etc.,

V. C. K. MITCHELL.

Aberdeen House, High Street, Brentwood. May 30, 1930.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 10.

In a dull and quiet week, overshadowed by the Derby and the approach of Whitsuntide, the feature of the stock markets has been a weakness in the gilt-edged market. The latter opened firm at the beginning of the week on the reinvestment of War Loan dividends, but gold withdrawals checked the upward tendency and there was a marked recession in prices at the latter end of the week, particularly in the Conversion issues and in 4 per cent. Consols. This movement cannot logically be attributed to disappointment at the absence of a reduction in Bank Rate, for in present circumstances such a change was hardly to be expected. On the other hand, there is still less probability of a rise in Bank Rate for some time to come, seeing that the market rate of discount is little better than 2⅛ per cent. Some of the recently issued stocks of a gilt-edged character remained firm, but in other directions markets were dull and very quiet. Industrials attracted scant interest, the reports of some of the large concerns being awaited with no enthusiasm. Weakness in the prices of the commodities had a depressing effect upon the more speculative markets. The present three weeks' account has opened in discouraging fashion and there is at present no sign that a change is in sight.

Two Newspaper Accounts.

Yet another of the Rothermere group of companies, Associated Newspapers, has presented an annual report showing increased profits for 1929-30. For the year ended March 31 last, the net profit amounted to £1,245,323, or about £40,300 more than for the preceding twelve months. The usual £400,000 is allocated to reserve and a sum of £200,000 has been allocated to special publicity, while £773,336 is carried forward, as against £695,013 brought in. The deferred shares receive a 40 per cent. dividend, the same as last year. The investments in subsidiaries amount to £1,569,725 and other investments £1,297,279. The investments in subsidiaries consist mainly of the 50 per cent. holding of ordinary Anglo-Newfoundland Development Company shares. In view of the severe competition in the newspaper world this result is certainly satisfactory. There are 9 million of the deferred 5s. shares and they now yield about £6 18s. per cent. Not quite so satisfactory is the report of Allied Newspapers of the Berry group. This company owns the *Sunday Times* and a group of Manchester papers. Mainly as a result of lower revenue from advertisements, net profits at £611,206 for 1929-30 are some £43,000 less than for the previous year. The new subsidiary Allied Northern Newspapers contributed £50,000 by way of a 5 per cent. dividend tax free. The allocation to reserve is maintained at £110,000 and the carry forward is slightly higher at £177,861. The ordinary dividend has been reduced from 14 per cent. to 10 per cent. on which basis Allied Newspaper ordinary shares yield about £8 10s. per cent.

The Weakness of Silver.

Like numerous other commodities, silver has been on the down-grade for some time. Last week it dropped well under 1s. 4½d. per oz.—the lowest since records have been kept—and a sharp re-action at the end of the week may be ascribed to bear covering rather than to any improvement in fundamental conditions. Simultaneously with a large increase in production in recent years there has been a falling off in the demand, especially for currency requirements. In quite a number of countries the use of silver as money has ceased; in others silver currency has been subject to debasement. The unsettled conditions in India and China have also played their part, indeed, the last named country has lately been a seller instead of a buyer of the metal. So far no suggestion of restriction of output has been put forward—possibly for the reason that such a step would be difficult if not impra-

Digitized by Google

ticable. Silver is frequently mixed with other metals, such as lead, zinc, and even copper. It may surprise some people to learn, for example that the Anaconda Copper Co. of the United States is one of the greates producers of the white metal. The Burma Corporation turns out some 7,000,000 ozs of silver per annum in conjunction with various base metals. In such cases, restriction of output would obviously be difficult, and it would be left for primarily silver undertakings such as the Santa Gertrudis, to apply the self-denying ordinance. As there seems every prospect that silver, over a period, will sink to an even lower level. the outlook for producers is anything but cheerful.

Investment in Industrials.

Investment in the ordinary shares of industrial undertakings necessarily involves a certain degree of speculation. The fortunes of such concerns must vary not only in accordance with the efficiency of their own management and changes in the prosperity of various industries, but also with the state of trade in general and its consequences on the buying power of the general public for commodities of all kinds. It is therefore not surprising that many unsatisfactory industrial results have been announced in the Press in recent months, and that industrial share quotations have shown a distinct downward trend. At such times opportunities are offered of obtaining sound shares at bargain prices, but the investor should concentrate on companies with proved dividend paying records over past difficult periods, and well-established positions in their trades. In such a category could be placed Imperial Tobacco or Carreras, to which we referred a week ago, or, in an entirely different field of activity, Bass ordinary which return about £5 19s. per cent., free of tax. The company's beers are, of course, of world-wide repute, and it has a record of conservative finance. Dividends at the rate of 20 per cent., tax free, have been paid on the last two occasions, and have been fully covered by earnings. The immediate return on General Electric Ordinary is substantially lower (£4 per cent.), but the market naturally discounts the probability of rising profits, in view of the rapid progress the electrical industry is making. Earnings last year were more than half as much again as the sum required for the 10 per cent. dividend on the ordinary shares.

POPULATION OF ALBANIA.

According to the census taken in Albania on May 25 the total population of the country was on that day 1,003,068, and that of the capital, Tirana, 30,806. Special care was exercised in connexion with the new census in view of the fact that the last census, taken in 1927, showed a population of only 833,627, which was regarded at the time as an under-estimate. The increase now shown in the population, over 20 per cent. in three years, suggests that on the previous occasion many of the inhabitants of Albania must have contrived to escape the enumerators' vigilance. The population of Tirana was returned in 1927 at 16,373, and in 1923 at 10,845.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

TURKEY.

Steel, Soldering Materials, etc.—The Administration Générale des Chemin de fer et des Ports d'Etat invites tenders for the supply of small quantities of high speed steel, soldering materials, and files. June 23. (D.O.T.)

EGYPT.

Pumping Plant.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of three internal combusion pumping units and accessories for Alag drainage pumping station. June 16. (D.O.T.)

Electric Generating Unit.—The Ministry of Public Works, Egypt, invites tenders for the supply, erection, delivery, and maintenance at Tor Quarantine on the Gulf of Suez, of an electric generating unit with accessories, motors, the erection of transmission lines and cordon lighting round a camp. June 30. (D.O.T.)

Machine Tools, etc.—The Egyptian Ministry of Communications, Ports, and Lighthouses Administration, Engineering Department, invites tenders for the supply of the following plant and equipment :—One crude oil, semi-Diesel engine, 45 B.H.P. ; one high-speed heavy duty radial drill, 6 ft. 6 in. ; one automatic stud and bolt screwing machine for bolts ⅝ in. to 1 in. diameter ; four heavy duty gap bed lathes ; three oil-fired tilting furnaces ; four hand-operated overhead travelling cranes ; four portable electric drills with breast plates, reversing type ; one portable electric deck planer ; four reversible pneumatic drills, 2 for holes up to 1¼ in. and 2 for holes up to 9/16 in. ; one electric battery truck, capacity 2 tons. June 10. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Manchester, July 5 ; Birkenhead, July 11). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matra for Calcutta (Birkenhead, June 23).

Bibby Line.—S.s. Shropshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 25).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta (London, June 14) ; s.s. Trekieve for Bombay ,London, June 21).

Cunard Line.—S.s. Bothnia for Gibraltar, Melilla, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, June 11 ; Liverpool and Swansea, June 13) ; s.s. Bosnia for Casablanca, Oran, Genoa, Leghorn, Naples, Messina, Bari, Gruz, Venice, Trieste, and Fiume, also at Palermo, Catania, Corfu, and Ancona if sufficient inducement (Liverpool, June 14 ; Swansea, June 17).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 24) ; s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17).

P. and O. Line.—S.s. Bhutan for Calcutta (London, June 20) ; s.s. Rawalpindi for Bombay (London, June 20).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, June 21) ; s.s. African Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, July 2).

Ellerman and Papayanni Lines.—S.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 24 ; Swansea, June 20) ; s.s. Manchurian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 5 ; Swansea*, July 5) ; s.s. Kelso for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 5) ; s.s. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, July 5 ; Swansea, July 10) ; A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 18) ; s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 26 ; Swansea*, July 26). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers ; Moroccan ports via Gibraltar ; Tripoli (Barbary) via Malta ; Syria and Cyprus via Alexandria ; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Angkor for Piræus, Istanbul, Izmir, Larnaca, and Beyrout (June 17) ; s.s. Mariette Pacha for Alexandria, Jaffa, and Beyrout, June 17) ; s.s. Pierre Loti for Alexandria, Jaffa, and Beyrout (June 24) ; s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (July 1).

Digitized by Google

ECONOMIC CONDITIONS IN BULGARIA.

[*The following notes are taken from the bulletin of the British Chamber of Commerce (of Bulgaria), dated May 31.*]

General Conditions.

The passing of the Budget in the National Assembly, and the copious rains during the month, which have been general throughout the country, giving hope for the new crops, coupled with the favourable trade balance, which has shown a steady improvement since February, have had a quieting effect upon finance and commerce. The monetary position, however, remains almost unaltered. Liquid money is scarce. Banks have relaxed slightly owing to the agriculturists disposing of quantities of cereals they had been hoarding in anticipation of better prices.

The export of tobacco has improved considerably. Textiles and yarns were more lively than at any period since January. Metals, ironware, and chemicals have been active mainly owing to seasonal purchases. Orders for manufactured goods or raw materials from abroad continue to be curtailed to absolute minimum requirements. The general tone amongst both merchants and industrialists appears to be more hopeful, and provided nothing unforeseen happens to the crops during June and July, there is every reason to predict that the economic position will show an improvement by the autumn.

The centralising (by the fusion of a number of the local banks) of finance into several strong institutions, both in the capital and the provinces, has already had a salutary effect towards stabilising the financial position.

Trade in 1929.

The report issued by the Direction of Statistics on the foreign commerce for 1929, shows that imports totalled 501,484 tons, of a value of 8,388.4 million leva, as compared with 354,989 tons, of a value of 7,040.9 million leva in 1928. The exports were 302,366 tons, of a value of 6,395.7 million leva, against 368,192 tons of a value of 6,231 million leva in 1928, or a decrease, in 1929, of 65,826 tons. The commercial balance for 1929 shows a deficit of 1,892.7 million leva, against 809.7 million leva in the preceding year, or an adverse difference of 1,083 million leva.

The value of imported articles in 1929 was: Textiles, 2,571 million leva; metals, 1,282; machinery and instruments, 1,167.8; construction material (wood), 383.8; leather, 369.1; cereals, 383.3; mineral oils and products, 303.3; paper and products, 236.1; motor vehicles, all classes, 209.4; vegetable oil, 201.5; dyes, paints, and oils, 185.5; chemicals, 173.4; glass and products, 157.4; Colonial goods, 130; rubber and products, 120.3. The value of the more important exports were: Leaf tobacco, 2,896.3 million leva; eggs, 734.5; maize, 3,903; hides and skins, 298.9; and rose oil, 261.8.

Bulgarian Grapes and Wines.

According to information received from Bulgarian Consuls and exporters, Bulgarian grapes are being well received on the foreign markets; 155,469 kilograms were exported in 1926, 540,000 in 1927, 952,825 in 1928, and 2,100,000 kilograms in 1929. The population engaged in viticulture are each year giving more attention to the care of their vineyards, and the Ministry of Agriculture has placed at their disposal qualified agriculturists, who have given advice and instruction in growing, selecting grapes, and packing for export. In consequence viticulture has reached a stage where its products are each year more in demand on the foreign markets. They are said to be as good as, if not better than, the grapes of other countries. With this gradual improvement in production, and when the grapes are better known, it is anticipated that over 20,000,000 kilograms will be exported yearly.

The question of Bulgarian wines, however, is different. A number of good local wines are being produced, one or two types of which are suitable for the European markets, and have been well received. The population engaged in wine production have not yet mastered the art of producing, owing to the more or less primitive methods which have been used in the past. The relatively large quantities of Bulgarian wines which were exported in 1927-28 was mainly due to the fact that the production of wines in other countries, owing to a bad season, was limited. The success during the two years preceding 1928 proved conclusively that if more efforts were made to adopt modern methods, and wine cellars were constructed where the grapes and wines could be kept in cool places, and the services of several foreign experts were engaged for the manipulation and preparing the types of wines in demand in Europe, Bulgaria could supply from five to eight million litres of good wines each season.

Miscellaneous.

During March 3,581 tons of tobacco were exported, as against 1,711 tons in February. The distribution was as follows (in tons):—Austria, 584.5; Belgium, 133.4; Germany, 399.1; Egypt, 10; Italy, 598; Poland, 286.2; France, 344.3; Holland, 2; Switzerland, 47.2; Czechoslovakia, 871.2; and Hungary, 300.

The amalgamation of the three local banks, namely, the Bank of National Credit, the Bulgarska Banka, and the Franco-Bulgarian Bank, under the title "The United Banks," reported in a recent issue, has now been completed and the new bank commenced operations on April 1. This institution will play an important rôle in the financial and economic position of the country, and will contribute towards stabilising the financial position.

The silk worm industry and the production of cocoons give occupation to a large number of peasant families. In 1928 over 900,000 kilograms of cocoons were raised, of which 844,176 kilograms, to a value of 248,054,000 leva were exported and represented 4.5 per cent., or fourth place in the exports. The Ministry of Agriculture during the last five years has given considerable attention to the development of this industry. Each year large quantities of mulberry tree cuttings are issued to the population, free of charge. As the number of mulberry trees matures, the quantity of cocoons increases, and it is anticipated that in 1934-35 the number of kilograms produced will exceed 1,000,000. There is a growing demand, in Western Europe, for Bulgarian cocoons, and this industry, when fully developed, will play an important rôle in the exports.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

THE ROUMANIAN MARKET FOR FILMS.

In spite of the gradual expansion of the Roumanian cinema net, the number of distributors in that country still greatly exceeds the needs of the domestic market, from the point of view of profitable enterprise (says an American Consular Report). There are a total of 26 Roumanian distributing organisations, three of which are American subsidiaries. The representatives of American film companies are reported to be doing excellent business. On the other hand, the situation is extremely difficult for distributors other than those who handle American films; they can scarcely compete with the predominating popularity of American pictures.

To insure successful distribution, a film must be first run in one of the big theatres of Bucharest. Moreover, rentals in provincial cinemas vary according to the size of the house, whereas one good first-run show in a big Bucharest cinema is sure to cover the purchase price of any film, so competition for first run play dates, of which there are but five or six, necessarily is keen, and often results in excellent films being distributed without profit because of the limited lucrative play dates.

There are two systems of film renting: either a certain sum is paid at once for the purchase of a film on a State right basis, or on a percentage basis of the gross, with a minimum guarantee. In either case exhibitors make better profits than distributors. Transportation is poor in Roumania, and often films ordered by provincial theatres are slow and irregular getting to their destination. Thus it often happens that a picture announced for a certain date is not received in time and has to be replaced by another. French "talkies" are more successful in Roumania than the German or English, French being the second language in the country.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended May 31:—

Grain.—There is no improvement on grain markets to report this week. In fact, the slight advance in prices at the beginning of the week was not maintained, and the market relapsed into its previous state of inactivity towards the end of the week. Peasants as well as speculative grainholders are still tenaciously holding on to their grain in expectation of doing better later on, and, in fact, as the former will shortly be busy with the hoeing of maize, the arrivals from the interior will, in all probability, be further reduced. The week under review was characterised by an extremely reduced activity in freights with rates fluctuating between 9s. 3d., 9s. 6d. Rotterdam/Hamburg/Weser and 10s., 10s. 6d. Antwerp. A steamer or two which were already on demurrage had to accept 8s., 8s. 3d. for their completions. There is no change in the situation at Constantza.

Timber.—In execution of old sales two large steamers of about 9,000 and 6,000 tons are loading for Buenos Aires, and a third steamer of similar size is expected to load for the same destination. Several vessels are loading for Alexandria and other Near Eastern destinations, including a 3,500 tonner which is completing her grain cargo with timber. A fresh engagement of about 130 waggons for three ports Spain is reported to have been closed at £10 10s. per waggon. Otherwise the market shows no improvement and little business is being negotiated excepting for a few stray parcels for Greece. Although it was thought that rates had become reduced to absolute unprofitableness, as such low rates have not been known for many years, there still seems to be a downward tendency.

Weather and Crops.—The weather has become much warmer—at times very hot, the shade temperature reaching 30 degrees Centigrade. It has generally been dry, though local showers, mostly of short duration but sometimes torrential, have been reported in most parts of the country, more especially in the west and north, where there are some further complaints of local damage by floods. The warmer and drier weather has been beneficial to the crops generally, after the unusually cool and rainy period of the last few weeks.

Sulina.—Bar depth, 24 feet. Notwithstanding the large amount of silt still coming down the river, the depth has been maintained undiminished. Good progress is being made with the extension of the north pier, and with fair and calm weather it is expected that the work will be completed by December. River depth also remains at 24 feet.

Constantza.—This week only a few thousand tons arrived from the interior, whilst shipments amounted to about 11,000 tons for the Rotterdam/Hamburg range and about 4,500 tons for Dublin. Eleven vessels loaded about 45,000 tons petroleum products and eight took oil fuel for bunkers.

Bulgarian Report.

Bourgas, May 24.—Grain.—The position on this market remains unchanged and no fresh transactions have been reported this week. The rainy weather continued throughout the week and has already caused damage to the crops, though so far only in a small measure.

CYPRUS CROP PROSPECTS.

The report for May on Cyprus crops gives the following details:—

The heavy rain which fell towards the end of last month favoured the development of rust. Many acres of wheat in the Messaoria district have been destroyed by this disease, and in other areas the attack is severe. The general outlook for wheat is fair and harvesting of the early red variety is now in progress. Prices are 4s. 6d. to 5s. per bushel.

Harvesting of the new barley crop is well advanced. The straw is short but the yield and quality of grain are good. Prices are 1s. 2d. to 1s. 8d. per bushel.

The oat crop is heavily attacked by rust. Prospects are poor. No stock is available.

The new potato crop is on the market. Prospects are good. Over 500 tons of the old crop are still available. Prices are 25s. to 45s. per ton. Offers are good, but the demand is very poor.

Sowing of the new cotton crop is practically over. The weather has been very favourable for cotton planting and germination is very good. Practically no stock is available in the hands of farmers, but most of last year's crop is still stored by merchants.

The market for carobs is stagnant. Offers for the new crop are 10s. per kantar. Prospects of the new crop are good.

The export of Lefka oranges is nearly over. Prices recovered towards the end of the season, and up to £3 10s. per thousand was reached. The fruit of the new crop is setting favourably; flowering has been very good.

The new cumin crop is very promising. Harvesting is in progress.

Tobacco marketing conditions are very discouraging. There are no quotations.

The Greek Government has sent instructions to the Greek Minister in Angora to sign the Economic Agreement between Greece and Turkey.

The death has taken place at Sydney after a brief illness of Lady Poynter, wife of Sir Hugh Poynter, chairman of Baldwins, Ltd., Sydney. Lady Poynter was the daughter of Mr. Charles Dickinson, United States Consul-General at Constantinople.

Sir Frederick Black, who was formerly Director of Navy Contracts and Director-General of Munitions Supply, died at his house, Pinewood View, Frimley Green, Surrey, on June 7, in his sixty-eighth year. He entered the Colonial Office in 1880, and three years later he was transferred to the Admiralty. In 1903 he was appointed Director of Naval Stores, and three years later became Director of Navy Contracts. Sir Frederick, who had been knighted in 1913, was holding the latter appointment in August, 1914. In the next year his services were placed temporarily at the disposal of the Minister of Munitions, and he was appointed Director-General of Munitions Supply, and in March, 1917, he was sent to India on munitions service. Later in that year he was attached to the British War Mission to the United States, and was placed in charge of the Oil Committee entrusted with the work of arranging for the purchase of oil from the United States. In 1918 he returned to the Admiralty, but in the next year he obtained the permission of the Board to resign in order to take up an appointment as a managing director of the Anglo-Persian Oil Company. He held that post until 1923, and since then has been a director of the Steaua Romana Oil Companies (British and Roumanian), and of other companies. His services during the War were recognised in 1917 by a K.C.B.

Engineering Topics

(By An Engineering Correspondent)

Asphalted Roads.

The advantages of surfacing concrete and water-bound macadam roads with an asphalt carpet in the one case, or by spraying with hot or cold asphalt emulsion in the other, has long been apparent to engineers. The point which has to be considered is, without doubt, the economic value of road surfacings; there are certain fundamentals that go to make up the qualities of long life under varying traffic conditions. Every engineer knows that there is no pavement that will last for ever, but every engineer knows which will stand up best against the traffic conditions with which it has to contend. In certain parts of the country, as in the Manchester districts, granite setts have answered all requirements so far as life is concerned; in the wilder localities, where only comparatively light horse traffic is met with, ordinary water-bound macadam roads stand up to their work as well as would far more costly pavements. In using the term "permanent types" of pavement when comparing them with the so-called low types, it must naturally be remembered that everything depends on the nature of the traffic. But, broadly speaking, the asphalted types of pavement stand well in the foreground, and in saying this we are in agreement with Mr. G. W. Craig, who wrote on the subject recently in the *Contract Journal*.

The life of a road surface depends a great deal on its base, and it is in respect of that particular feature that more care should be taken in construction of many of our newer roads. In some cases quite insufficient foundations have been laid, and on them comparatively thin rafts of concrete have been placed, only to break up and fail, not because the concrete was incorrectly mixed, proportioned or laid, but simply because the foundations have sunk, moved, or given way, altogether. The foundations should be so proportioned and laid that they will neither sink nor shift under the stresses they are called upon to bear. They should be constructed in accordance with specifications that will, as Mr. Craig says, ensure adequate support for the wearing surface. We are aware of the fact that all sub-grades are not suitable without further preparation. We are also mindful of the fact that certain sub-grades are unsuitable for the most rigid form of base construction. For the purpose of this discussion we are content with saying that special cases of questionable sub-grades should have special treatment. A careful study of the findings of those who have given this subject serious thought is extremely interesting and worthy of consideration and intelligent use.

Cement Mixtures.

The best concrete for road work is usually made by the use of one part cement to three of sand with six of aggregate, which is known to engineers as a "lean" mixture. In it there is quite sufficient cement to bind the sand together so as to hold the aggregate firmly in place. In practice it has been found that mixtures with a larger percentage of cement tend to crack and break up under traffic stresses. The use of lean mixtures, admittedly, has been a subject for discussion, and quite a library has been written on that and kindred topics, and there are still road engineers who either use the mixture with diffidence or else go boldly in the face of practical results and use a 2:3:4 mixture. But the lessons taught by practice are that the lean mixture gives the best results for road base purposes under all conditions of traffic.

Leaving controversial subjects, there seems no doubt that asphalt is destined to be the salvation of a number of concrete roads which either improperly laid or subject to stresses above their capacity, are breaking or have broken up. These are either coated with an asphalt mixture as they are, or are broken up, rolled and then surfaced. In fact, so useful is asphalt for this purpose that in many localities roads of a low grade concrete have been made with the deliberate intention of allowing them to give as long service as possible, if only for a few months, and then coat them with an asphalt mixture. For economic reasons the value of this concrete may be doubted; if an asphalted road is to be made, why not construct it at once instead of later?

Amongst minor points that have been raised is that as to whether expansion joints in concrete roads are really necessary. All that we know, theoretically, of road work, all the laws of science would answer that in the affirmative, but it is a curious thing that in practice expansion or contraction joints for base construction are not necessary, and when used prove a detriment by either humping the wearing surface or causing unsightly cracks which lead to early destruction. So far as reinforcing is concerned, it is generally used as a protective measure against contraction and expansion, and so we may be content with saying that as bases are not subject to violent changes of temperature or even to changes at all except within very narrow limits, there is no need to burden base construction with that cost at all.

So far as wearing surfaces themselves are concerned, there is not a great deal of difference between sheet asphalt and asphaltic concrete. Sheet asphalt is, perhaps, used more largely than the other. For one thing, the design of sheet asphalt mixture has become better understood and what Mr. Craig called the "hit-or-miss" method has no place now in pavement design. We have much for which to thank those research workers in asphalt mixtures, and the work of Hubbard, Skidmore and others may be cited as notable contributions to asphalt technology.

Company Meetings.

BURMAH OIL COMPANY.

A Prosperous Year.

Chief Causes of Improved Results.

Dividend of 30 per cent.

The Indian Market.

Kerosene Prices and the Fiscal Changes.

Anglo-Persian and "Shell" Interests.

Sir John Cargill on the Outlook.

The twenty-eighth annual general meeting of the Burmah Oil Company, Limited, was held on June 6 in the Merchants' Hall, 30, George Square, Glasgow.

Sir John T. Cargill, Bt. (Chairman of the company), presided, and there was a large attendance of shareholders.

The Chairman said:—Ladies and gentlemen,—Having here the certificate of the due posting of the notice calling this meeting, I propose, with your permission, to hold it as well as the report and accounts as read, and to ask the secretary to read the auditor's report.

The Secretary (Mr. F. G. Holdsworth) having read the auditor's report,

The Chairman, continuing, said:—Ladies and gentlemen,—I propose at once turning to the accounts. Broadly stated, the improvement on the results of the last two years is due to three main causes, namely:—

1. Immunity in the period from price-cutting conditions in the kerosene market for India which ruled between September, 1927, and June, 1928;
2. Economies in working costs and benefits resulting from the changes in your marketing arrangements in India; and
3. A considerable increase in income from interest on loans on the market and from dividends from investments.

Year's Profit and Appropriations.

Reference to the profit and loss account will show you that, after charging £528,455 18s. 4d. for depreciation, or £146,720 16s. 4d. more than in 1928, the balance of profit of £2,956,548 9s. is greater than that of that year by £1,397,574 18s. 6d. Transfer fees and interest and dividends, yielding together £1,214,239 14s. 6d., or £651,892 6s. 8d. more than in the preceding year, increase the balance of profit to £4,170,788 3s. 6d., and, deducting from that figure the cost of directors' and the auditor's fees, income-tax, subscriptions, employees' provident fund, interest on the Five-and-a-Half per Cent. Debenture stock, and the outstanding balance of issue expenses of that stock amounting in all to £733,315 18s. 2d., the balance of profit carried down is up by £1,957,846 2s. 10d. at £3,437,472 5s. 4d. Adding the 1928 "carry forward of £151,084 7s., the disposable amount becomes £3,588,556 12s. 4d., from which your board has made the following allocations, namely—

To general reserve £500,000, bringing it up to £1,500,000;

To insurance reserve £20,000, bringing it up to £540,000;

To fields expenditure equalisation reserve £150,000, bring it up to £900,000;

and has applied to the writing down of shares in subsidiary companies £500,000.

These allocations absorb £1,170,000, as compared with the £370,000 utilised in 1928 for the three normal reserve accounts, and the amount left to be carried to the balance-sheet is thus some £800,000 in excess of the 1928 figure at £2,418,556 12s. 4d., of which the Preference dividends and the interim Ordinary dividend for the year took £858,332 13s. 8d., and of the balance of £1,560,223 18s. 8d. your Directors recommend that £1,160,449 1s. 9d. be utilised in payment of a final dividend on the Ordinary shares of 4s. per share, less tax at 3s. 1¾d. per £, or the United Kingdom rate of 4s. 6d. less Dominion income-tax relief, making, with the interim dividend, 30 per cent. for the year, as compared with the 20 per cent. of the two preceding years. There is left a balance of £399,774 16s. 11d., which it is recommended should be carried forward.

Balance-sheet Figures.

If you will now turn with me to the balance-sheet I shall endeavour to show you how in its new form, required by the provisions of the new Act, the figures compare with those of last year.

On the liabilities sides you will find the capital position unchanged.

The amount appearing under the new heading of "Debts due to subsidiary companies" is mainly on account of the company's employees' provident trust fund. The amounts of "Sundry creditors and credit balances" are up £337,336 14s. 4d. on 1928, whereas, on the other side of the balance-sheet, you will find that "Sundry debtors and debit balances" of £418,155 7s. 9d. are ostensibly down on 1928 by £1,843,208 2s. 11d. Actually, however, they are £590,796 19s. higher, since the comparable figure is the aggregate of the amounts now shown separately under the headings respectively of "Loans to employees" and "Indebtedness." The real comparison between those two headings of the old balance-sheet therefore shows a net increase on the assets side of £55,413 13s. 3d.

I have already referred to the increase in general, insurance, and fields expenditure equalisation reserve accounts. The fire and marine insurance account of £1,099,001 12s. compares with £1,013,899 9s. 5d. in the preceding year's balance-sheet; the increase representing premia charged internally on risks covered less claims during the year.

On the assets side the first item, refineries (including land and buildings), stands in the books at £1,507,402, which is an increase as compared with the previous year of £43,000. The second item, oil wells, boring plant, etc., remains at the very low figure at which it has stood for many years. "Fields electrification" and "Pipe lines" are each down by some £19,000 odd; "Tanker and tank installations" by almost £100,000; and "Stocks of plant and stores" by nearly a quarter of a million, whereas "Stocks of products" are up by over £90,000. Our financing of the Assam Oil Company, Ltd., represents the indebtedness of the subsidiary companies, and the balance-sheet itself explains the indebtedness by associated companies.

Investments.

You will see that our investments are split up under four headings. British and Indian Government securities, at £2,676,945 7s. 8d., have increased by some £1,288,000, and since the date of the balance-sheet have been still further added to. The "Miscellaneous" investments include our direct holding in the Anglo-Persian Oil Company, Ltd. The Ordinary shares of that company held meantime by us through the B.O.C. Anglo-Persian Share Trust, Ltd., are included in "Investments in subsidiary companies," where they stand at par. Under the "Miscellaneous" heading the holding of these Ordinary shares is, as the balance-sheet states, valued at 11s. 8½d. per share. We have had to give this figure since it represents neither cost nor under, for you will remember that on the occasion of our last share bonus issue in June, 1926, we wrote our holding up from its cost to us to par, but the subsequent share bonus issue by the Anglo-Persian again brought it back to the original cost figure, and the sale by us of the 700,000 of these shares to the B.O.C. Anglo-Persian Share Trust, Ltd., at par resulted in a profit, which was applied to writing down the book value of the shares we directly retained.

Under this "Miscellaneous" heading is also included the company's holding of Ordinary shares in the Shell Transport and Trading Company, Ltd., increased since the 1928 balance-sheet by the 166,667 shares taken up out of the new issue at par which that company made in January, 1929. The £7,380,488 4s. 6d. book value of these "Miscellaneous" investments represents a net increase on their corresponding value in 1928 of over £100,000.

Subsidiary and Associated Companies.

The next division of the investments—subsidiary companies—includes the holding of Ordinary and Preference shares in the Assam Oil Company, Ltd., at cost, less the £500,000 written off out of the year's profit, to which I will refer later, as also the shares of the B.O.C. Anglo-Persian Share Trust, Ltd., which holds the 700,000 shares of the Anglo-Persian Oil Company, Ltd., at par, to which I have just referred. There is also included the Debenture and share interest in the Tinplate Company of India, Ltd.

Digitized by Google

Lastly, the investments in associated companies comprise your interest in Burmah-Shell Oil Storage and Distributing Company of India, Ltd., and in Candles, Ltd., at, in aggregate, some £46,000 less than the figure at which they appeared in 1928. Together these four divisions show a net increase in your total investments of over £800,000.

There remains only the item of loans, deposits, and cash, which at £1,458,296 18s. 3d. shows an increase on 1928 of over £1,000,000.

I am sure you will all agree that the results for the year are most satisfactory, and that they have been secured in the present not too satisfactory state of the petroleum industry as a whole is complete justification of the conservative policy which, with your steady approval, has characterised the treatment by your board of the profits and finance generally of your company since its inception, and which it is continuing in the accounts now before you. For while your board has the confidence that this policy has placed you in a position from which you can regard with comparative composure the normal ups and downs to which the industry is peculiarly subject, it is alive now, as always, to the unusual hazards which attach to its raw material, and there are to-day special reasons, both political and economic, why your Directors have considered it prudent and advisable to deal with profits on such a conservative basis and add so materially to reserves.

Indian Conditions.

India, because of its preponderatingly agricultural habits, is possibly feeling more than most countries the effects of the present world-wide economic depression, and while this, and the added cloud of the political unrest there, continue, prudence demands the qualification of our broad confidence in the future both of India and of your company with continued caution. Happily neither condition has so far prejudicially affected the outlet there for your products or your operations generally, and your products and operations were equally fortunate in escaping damage from the earthquake which recently played so much havoc in Burma and from the unfortunate communal riots which resulted in such loss of and injury to life in Rangoon.

These political and economic uncertainties, and the still imperfectly balanced relation between supply and demand for the products of the industry, cannot, and should not, be ignored in any forecast of the future and themselves sufficiently warrant a continuance of that conservative policy to which I have just referred.

Those best placed to attempt the correlation of potential resources of natural petroleum with the increasing demand for it may, and indeed, in the very nature of the hypothetical data which must to a great extent be involved, do in fact, arrive at varying conclusions. All at least agree, however, that not the most optimistic of their conclusions can justify, whether in the interest of the industry or of the pocket ultimately of the consumer, the over-production which has been so much the characteristic of recent years. These efforts then should, and do, have the best wishes of all of us, but we have so often seen failure come of similar efforts in the case of raw materials in smaller volumes and in closer and fewer and therefore fundamentally more manageable hands than is the case with petroleum that one cannot rely too completely on the success of efforts here. As it is, coming near home, new outside importations, forced by these conditions to try to find an outlet somewhere, have this year been appearing on the Indian market, where they are already a disturbing factor.

Duties on Kerosene.

It is in these conditions, which may mean so much for the smaller indigenous producing companies of India, that the Government of India have in this year's Budget reduced the difference between the import duty and the Excise duty on kerosene from 1a. 6p. to 9p. per gallon. As chairman of the Assam Oil Company, Ltd., at its annual meeting on the 26th ultimo in London, I criticised this step in its relation to that struggling company and others similarly placed in India and Burma, and I do not propose saying more here than that so far as your company is concerned this potential change was to some extent discounted by us as far back as 1905, when we initiated our kerosene price limitation policy. For the operation of that policy has during many of these years meant giving away more than the ostensible protection represented by the excess of the import over the Excise duty, and during the remainder of the period a considerable portion of it.

Our price limitation policy was intended, and has served, as some recognition that we neither asked for nor required the advantage of these fiscal conditions. The protection was there and automatically it came our way. But we largely gave it back by this price limitation policy, which has on average all these years of its existence given India a much cheaper kerosene bill than but for it she would have had to foot. It is for these reasons then that just as we made no claim for protection during the recent war of rates in India, so now we have made no representation against this fiscal change. For we are securely established and prosperous enough to meet fair competition successfully and are quite competent and prepared to rely on ourselves.

The Assam Oil Company.

In such conditions as those through which the Indian industry passed in 1927 and 1928, and in conditions of world-wide over-production forcing petroleum products on to the market at uneconomic levels, one can, however, only view with anxiety the effect which this reduction may have on the smaller indigenous companies, and it is for this reason that your board has thought it well to utilise some portion of your past year's results to write down the cost of your holding in the Assam Oil Company, Ltd., by £500,000.

These friends, under our management and with our financial assistance, have increased their production sixfold since we acquired our interest in the company in 1920; but added to the natural handicap of their geographical position which involves increased production moving at greater transport cost towards the seaboard, where lower values are increasingly met—since selling prices in India are determined by seaboard prices plus charges to the up-country markets—there was the setback of the nine months' rate-cutting in India during 1927-28; and now there is the damage, actual and potential, of this worsening of their fiscal position. These happenings, entirely beyond our friends' control, have unhappily largely reduced, if they have not already cancelled, the real advances they have made, so that while they have reason to expect very shortly now to reach the increased crude oil production for which they have already completed their refinery, it is going to take much more time, and further careful nursing because of these conditions, before they can expect to clear off the loss at the debit of their profit and loss account and begin to repay to you the loans you have made.

There is really nothing to add to the report and what I have already said as to your own producing, refining, and marketing operations or as to the prospects for the current year. These up to date have been quite favourable, and, subject to the adverse conditions referred to, we anticipate being able again to submit to you in due course a favourable report.

Anglo-Persian and Shell Holdings.

In these days of world-wide industrial depression we are glad in these accounts to have been able to submit such an excellent report, and we can further congratulate ourselves as well as our friends on the excellent results which the Anglo-Persian Oil Company, Ltd., and the Shell Transport and Trading Company, Ltd., have recently made known. We are reasonably confident that we can look forward with assurance to the steady and continued progress of both these companies, and to the enhancement of the value of our investments in them. The dividends from these and from our other investments and our interest account contribute very substantially to the company's profits. Almost 40 per cent. of the £4,170,788 of your profit and loss account came from such sources and from operations outside of India, while the actual trading of your products in the United Kingdom itself was responsible for an infinitesimal fraction of this 40 per cent.

That the 60 per cent. or so of your profits which has come out of India has been secured at selling prices which have given the smaller indigenous companies quite inadequate returns for a business of this nature, and that if anything they have been under world parity, is all that needs stating as to their reasonableness from the consumer's point of view. But unfortunately for these smaller companies your results as a whole, and not their results secured merely from trading in India, are taken as the criterion of their ability, unprotected, to continue their contribution to the nationally very valuable and important indigenous industry, no regard being apparently paid to the fact that some 40 per cent. of these results of yours has nothing whatever to do with the company's trading operation in India and that the same sources of revenue are not available to them.

Tinplate Company's Operations.

A word as to the Tinplate Company of India, Ltd. The strike engineered at its works by outside political agitators for purely political purposes which was in force when I addressed you last year ended with the realisation that there were only these reasons, and no economic justification for it ever having started. Since then

Digitized by Google

operations have been maintained steadily and satisfactorily up to capacity, and I refer to it here now merely to mention that the political agitators responsible for it and for sympathetic trouble at the time of the Tinplate Company's strike with labour at the Calcutta installation of Burmah-Shell Oil Storage and Distributing Company and at other companies' installations there, accompanied their campaign with the most scurrilous libels on your company in that type of the Indian Press to which the Government of India had recently to direct its attention and suppress. This curtailment of this sort of licence by people against whom one can have no satisfactory remedy through the Courts was long overdue.

From the special notice accompanying that of this meeting you will have seen that an extraordinary general meeting has been summoned at the registered office for Friday, June 20, to adopt new articles, in the main to bring them into conformity with the requirements of the new Act. Prints can be seen at the registered office in Glasgow of Messrs. Miller, Thomson, Henderson and Co., Solicitors, 190, St. Vincent Street.

Tribute to Staff.

And once again it is my privilege as I am sure it is also your pleasure that I should take this opportunity to express the keen appreciation all of us have of the efficient, loyal, and fruitful efforts of your administrative and executive staff here at home and in the East of which the results I have put before you are the reflection. I can assure you that there is a spirit of co-operation and of keen interest and pride in your company actuating these men which forms not the least of your "hidden reserves."

I have now to propose "That the report of the Directors and audited statement of accounts, including the balance-sheet and profit and loss account to December 31, 1929, now presented to this meeting, be received, approved, and adopted, and I shall call on Mr. R. I. Watson, your managing director, to second the motion. After it has been seconded, but before putting it to the meeting, I shall be pleased to reply to any questions which shareholders may care to put."

Mr. Watson.—I have much pleasure in seconding the motion.

The Chairman.—Any questions, ladies and gentlemen? There being none, I have now much pleasure in putting formally to the meeting the motion which I have just proposed, and which Mr. Watson has seconded.

The motion was then put to the meeting by the Chairman, who declared it carried unanimously.

Dividend Resolution.

The Chairman.—I have now pleasure in moving: "That the dividend on the Ordinary shares recommended by the Directors at the rate of 20 per cent. (4s. per share), less tax, making, with the interim dividend paid in November last, 30 per cent., less tax, for the year, be adopted, and that same be hereby authorised to be paid on June 13, and that the balance of £399,774 16s. 11d. be carried forward."

Mr. James S. Harvey.—I have much pleasure in seconding the motion.

The Chairman.—I am quite sure you are all agreeable to that, ladies and gentlemen. (Cheers.) I have now much pleasure in moving: "That Sir Campbell K. Finlay be re-elected a Director of the company."

Mr. William J. M'Conie.—I have much pleasure in seconding.

The Chairman.—Are you all agreeable?

The motion was approved.

The Chairman.—I have also pleasure in moving: "That Mr. D. W. T. Cargill be re-elected a Director of the company."

Mr. S. Excell.—I have much pleasure in seconding that, Mr. Chairman.

The resolution was unanimously carried.

The Chairman.—Finally, I have to move that Sir David M'Cowan be re-elected a Director of the company.

Mr. K. J. Brown.—I have very much pleasure in seconding the re-election of Sir David M'Cowan.

The Chairman.—Are you agreeable, ladies and gentlemen? (Cheers.) I will ask Mr. Couper to move the next resolution—the reappointment of the auditor.

Mr. J. B. Couper.—I beg to propose the reappointment of Mr. James Herbert Wilson, C.A., as auditor for the current year.

Mr. Forrester Carlow seconded, and the motion was adopted.

The Chairman.—That is all the business.

Vote of Thanks to Chairman.

Mr. Robert F. Barclay.— Mr. Chairman, I am sure it is the wish of every one in this room not to go from this meeting without according a very cordial vote of thanks to Sir John Cargill not only for his conduct in the chair to-day but for his never-tiring exertions in the interests of the great company over which he presides. (Hear, hear, and cheers.) Since we last met together a tragic personal sorrow has come to Sir John, and I am sure that I speak the truth when I say that the heartfelt sympathy of every shareholder of the company and of the whole community went forth to Sir John on that occasion. (Hear, hear.)

Notwithstanding the difficulties and anxieties during the year—industrial, political, and financial—to which Sir John has referred, he and his co-directors have presented us with a truly magnificent report. I am sure it transcends even the most sanguine expectations of the most sanguine shareholder—(hear, hear)—and I am sure that his speech to-day has once again convinced us, if we required any convincing, of his wonderful grasp and knowledge of the affairs of the company. (Hear, hear.) We are convinced that under the chairmanship of Sir John Cargill the affairs of the company will be managed in the future as they have been in the past, with courage, with caution, and with the greatest business sagacity. I ask you to accord Sir John a very hearty vote of thanks. (Cheers.)

Sir John Cargill's Acknowledgment.

The Chairman.—Ladies and gentlemen,—While I greatly appreciate the vote of thanks which has been proposed in such kind and sympathetic terms by Mr. Barclay, and so cordially endorsed by you all, I have felt for some time, and as the years go on, that this vote of thanks ought to take a more comprehensive basis and that it should certainly include Mr. Watson and Mr. Whigham, who, as I said last year, are a combination for managing director and assistant managing director which, I personally think, it would be impossible to beat—(cheers)—and should also include your staffs, both at home and in the East, for it is to the untiring efforts and the outstanding ability of these two gentlemen and the loyalty, enthusiasm, and efficiency of your whole staff that the wonderful progress of this company and the splendid position it stands in to-day are so largely due. While personally I naturally feel very

THE CONVENIENCE OF THE CHEQUE

For those who know beforehand where they will be likely to require money, the system by which the Westminster Bank can arrange for a customer to cash his own cheques abroad is an undoubted attraction. Any local branch manager will be pleased to arrange with the Bank's agent in Basra, say, Hillah, Baghdad, and Mosul, to cash a customer's cheques within any pre-arranged limits. Nothing but a cheque-book need be carried, and the utmost ease and safety are enjoyed

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Digitized by Google

great pride in the record and the position of this company, what I feel a much greater pride and satisfaction in is the loyalty—I think I might even go a step further and say the affection—in which I have been held by practically everyone with whom I have worked and who have worked under me during the 26 years I have been chairman of this great company. (Hear hear, and cheers.)

Company's Strong Position.

I do not think it is necessary for me to say to you that of all the very fine balance-sheets I have put before you at these meetings the one I have put before you to-day is by a long way the strongest. I think that must be patent to all of you and to all of those who have followed the course of the operations and the accounts of this company. (Cheers.) In anything approaching normal times I would have spoken to you to-day of the future of your company with the greatest of confidence: in fact, for once in a way I think I might even have gone the length of being optimistic. (Laughter and hear, hear.) But in these trying and uncertain times, which are world-wide, he would be a very bold man who would prophesy what the position of almost anything will be 12 months hence, and I will just content myself with saying that never in the history of your company has it been in a stronger position than it is to-day to face up to trying time if by any possibility these should come along. And, as I have already said, short of something in the nature of a world-wide upheaval of trade and of the petroleum industry, I feel confident that a year hence we will be able to lay before you another satisfactory report and a very satisfactory statement of accounts. (Cheers.) I thank you again for the very kind vote of thanks you have given me, for your sympathetic reception, for your attentive hearing, and I hope sincerely that we will meet again under equally auspicious circumstances. (Loud cheers.)

The meeting then terminated.

SUEZ CANAL COMPANY.

Increased Dividend.

The Economic Outlook.

The seventy-sixth annual general meeting of the Suez Canal Company was held in Paris on June 2.

The Marquis de Vogüé (the president), in submitting the report of the directors said:—The results of the year 1929, of which we have rendered account, have shown a new and marked progress in the development of the undertaking. The transit receipts, amounting to 1,116,000,000 francs, were 4 per cent. higher than those of the previous year, which was a record. That increase enables us, notwithstanding the increase in expenditure, to propose that the gross dividend per capital share should be increased from 644.57 francs to 667.01 francs. In accordance with the traditional policy of your company, we have considered it our duty to let our shipowner clients benefit from this prosperity, their present position being in striking contrast to our own. We have therefore decided to make, as from September 1 next, a reduction of 25 centimes in the transit dues on loaded vessels, bringing this down to 6.65 francs. Further, from the same date the rate on vessels in ballast, which up to the present has always been 2.50 francs below the normal rate, will be fixed at one-half of that rate. In taking this decision we have not overlooked the slackening of the traffic which has been in evidence for the past three months and which makes it necessary to anticipate that the excellent results of 1929 will not be maintained in the present year. But we came to the conclusion that this consideration ought not to prevent us from making with regard to shipowners a gesture of solidarity which would be particularly opportune and is keenly desired. The actual loss of receipts resulting from the reduction will be much diminished for the current year, since the new rates will only apply for the last four months. Next year it may be hoped that the economic crisis will be, if not ended, at least much lessened. Be that as it may, the position of your company is such that the decrease of rates will not compromise the maintenance of the dividend at the total which we propose to you this year.

The total receipts for the year amounted to 1,189,958,441.03 francs, exceeding by 22,846,353 francs those for the previous year, which, you will remember, benefited from an exceptional receipt arising from the revaluation at par of the sterling included among the assets at December 31, 1928. The expenditure amounted to 311,243,234.56 francs. The increase of 17,357,621.70 francs over the 1928 figures is due to carrying out important works for the improvement of the banks of the Canal and repairs necessitated by the state of some of our equipment. It arises also to some extent from the traffic increase, which naturally entails an increase of certain working expenses. As last year, we propose to set aside 25,000,000 francs for amortisation and renewal of material, and 25,000,000 francs to the special fund for the construction of houses in Egypt. On the other hand, the sum set aside for Canal improvement works, which was 100,000,000 francs last year, can be reduced without inconvenience to 80,000,000 francs. After providing for these amounts, the surplus of receipts over expenses stands definitely at 738,634,581.47 francs. Adding the amount brought forward from 1928 of 4,105,646.42 francs, there is an available sum of 742,740,227.89 francs. It is proposed to fix the profit for division at 737,478,309.86 francs, and to carry forward the balance of 5,261,918.03 francs. The division of the distributable profit of 737,478,309.86 francs among those entitled to it will result in making the dividend 654.51 francs on each share. That dividend, increased by 12.50 francs interest for the capital shares, represents a gross revenue of 667.01 francs and a net revenue of 589.07 francs for the registered shares and 530 francs for the bearer shares.

The maritime movement through the Canal in 1929 shows, by comparison with that for 1928 (which itself surpassed all previous records), an increase of 1,560,112 tons net, or 4.9 per cent. It amounted to 33,466,014 tons. The number of transits was 6,274, against 6,084 in 1928. The traffic in ballast stood at 2,805,034 tons, and represented 8.4 per cent. of the total movement, as against 9.3 per cent. the previous year. In this traffic tankers figured for 84.3 per cent. The average size of vessels has slightly increased; it amounted to 7,346 tons gross. The proportion of transits made by vessels of more than 10,000 tons gross increased from 11 to 11.7 per cent. The average stay of vessels in the Canal was 14 hours 57 minutes; that is the shortest time that has yet been recorded. The number of passengers carried was 325,855, or 8,137 above the total for the previous year. In the division of the tonnage by nationalities the British flag, as always, is in the first place with 57.1 per cent. of the traffic, against 56.8 for the previous year. It thus regains the 1927 percentage. The Dutch flag occupies the second place and is closely followed by the German flag. The latter, totalling 3,455,402 tons, surpassed all previous results. Then come the French and Italian flags.

The total weight of merchandise passing through the Canal amounted to 34,516,000 tons, exceeding by 1,894,000 tons the maximum recorded for 1929. This increase was shared by both directions of traffic. In the outward movement the activity was particularly pronounced as regards consignments of metals and machinery, which exceeded three and a half million tons, an increase of 20 per cent. on the previous year, the principal destinations being British India, China, Japan, and the Dutch Indies. Appreciable progress is also to be recorded in regard to refined sugar, feeding stuffs, cement, and coal; the last commodity with a total of 771,000 tons surpassed all results obtained since 1923. As regards the homeward traffic, there was an increase of 961,120 tons despite an important fall in shipments of cereals, and more particularly rice from Indo-China and Siam; most of the other categories of merchandise—oils, mineral oils, minerals, textiles, rubber—have in fact provided ample compensation. Oils, without showing the same remarkable expansion as in 1928, have continued to play a predominant rôle in the development of the south-north traffic. Several products passed their previous records: notably soya beans, with 1,805,000 tons; groundnuts, 1,225,000 tons; manganese, 1,200,000 tons; and rubber, 809,000. Raw sugar, totalling 819,000 tons, approached the record of 1920.

The development of the traffic recorded in 1929 has not been maintained during the present year. By March the tonnage in transit had fallen to a total considerably below that of the previous year; by the end of April the difference amounted to 407,351 tons, and unfortunately it is possible that it will go on increasing up to the end of the year. An economic crisis, characterised by the almost general fall in wholesale prices and aggravated by the repercussions of the crash of the New York Stock Exchange, prevails in the principal European countries; if in the great basic industries the slackening of production is not everywhere equally in evidence the general economic activity is certainly declining. There results at the same time a decreased demand for raw materials and a decline of the purchasing power of Europe in the Eastern markets. The abundance of tonnage afloat makes the effects of this crisis more marked for shipping concerns—which have seen some freights fall below the pre-War level—than for the Canal traffic; but the laying up of vessels is increasing, and if it results in a raising of freights it is to be anticipated that the maritime movement of the Canal will be affected. Moreover, the last wheat crop in Australia has been relatively poor. Finally, it is to be feared that the political troubles in India will exercise a depressing influence on the trade of that region. Happily there is ground for hoping that the economic crisis will be of short duration; the easy monetary position in most of the European countries constitutes in fact an efficacious stimulus to industrial activity. If the Canal traffic appears to be falling this year to a level below that of last year it is permissible to think that the recovery will not be slow in manifesting itself.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 4:—

Egyptian Futures.

Sakel Contract.—There has been rather more interest displayed in this contract during the past week, but values, after being maintained for the greater part of the time in the neighbourhood of last week's level, have latterly declined to fresh low levels for the season. Stop-loss selling by Continental houses, and lower American markets, have been primarily responsible for the decline that has taken place. A further weakening factor has been the action of old crop positions since the end of last month. Those running the May option received a fair quantity of Sudan dockets, and evidently, rather than carry these into November, they have been transferring their hedges into July, and through this operation have materially closed in the premium which has hitherto been maintained on the position in question.

Trade reports continue to be of an unfavourable character, and, as most concerns will take the opportunity of extending their usual Whitsuntide vacation, no fresh developments in this quarter can be anticipated for the next ten days, at least. One feature that may effect some improvement in the outlook is the point to which we have already referred, that is, the closing down of the difference between old and new crops. When faced with a discount of 50 to 60 points, naturally all sections of the trade have been limiting their commitments to the lowest possible level. With the more normal situation now ruling, it will probably be found, on a resumption of business, that more confidence will be shown and that business in both yarns and actual will tend to improve.

At one time during the week the Alexandria market started to react, advancing about half-a-dollar in two days. This movement, we believe, was due to short covering on reports that the Government had declared that they would hold their purchases off the market for three years, if necessary, and also bring into force some policy for restricting the acreage of the coming crops. To judge from the action of their market, however, during to-day's session it would appear that the above report has not received the necessary confirmation, as all the advance witnessed has since been lost. Even in face of the decline that has taken place since last week we see no reason to change the views we have recently expressed to the effect that new crop values have worked down to a reasonable level, and that moderate purchases, especially by those who are prepared to follow the market down should a further easing be experienced, may readily show reasonable profits during the summer months.

Upper Contract.—We have again to report a very quiet state of affairs in this contract, operations being confined to isolated transactions. Price movements have again been mainly governed by the action of the American markets, and the spot demand continues to be on a disappointing scale. New crop news continues to be of a favourable character, and even at this early date of the season anticipations are for a record yield.

Egyptian Spot.

Local inquiry has shown some improvement this week, and rather more business has been put through, but, in spite of this, quotations have continued to sag, and there is no sign yet that the bottom has been reached. Slightly more interest has been shown, both by the Continent and by America, but little result has become apparent as yet.

Sakels have been in moderate request, chiefly within a range of from 14¾d. to 15d. Medium qualities have been neglected and the improved demand for the low and inferior cottons, which has been reported from Egypt, has not been reflected here.

Uppers.—This cotton has been in steady but limited request at from 20 to 40 on July Liverpool contracts, and the better cotton at from 70 to 90 on has also attracted a certain amount of attention. Rather more interest has been displayed in the "off" qualities, but we fear that, up to date, results have been only meagre.

Pilion.—A fair demand has been witnessed for Pilion cotton at from 11d. to 11½d., but sales, so far as we can ascertain, have been insignificant.

Nahda.—Interest in this cotton has again been noticed; in fact, the inquiry appears to be growing steadily, although the results obtained have not been in proportion. We can only repeat what we said last week, that as business improves a better turnover in this growth should be witnessed.

White Cotton and Maarad Cotton.—A few isolated requests have been received, and a moderate amount of business in White cotton has been transacted.

Tokar Sakel.—Some inquiry has again been seen, but spinners have invariably stipulated for new crop cotton, and continue to ignore the old. Sales have only been moderate.

Sudan Sakel.—This cotton has again suffered from neglect.

C.i.f. Business.—There has been more inquiry for new crops, but with disappointing results. Business for prompt shipment has again been merely nominal.

Forwardings were returned as 6,603 bales Egyptian and 1,732 bales Sudan. Spot sales have been estimated at 1,000 bales Egyptian and 150 bales Sudan Sakel. Quotations of Sakel show a reduction of from 55 to 60 points. Upper quotations are reduced 18 points, and those of Pilion 20. F.G.F. Sakel to-day, 13.30d. F.G.F. Upper to-day, 9.93d. F.G.F. Pilion to-day, 10.60d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended May 29:—

Since our last report we have only had five business days, the market being closed to-day for the celebration of the Muslim New Year. The week's summary of price movements is as follows:—Sakellaridis: July, 28.09 dollars, 0.04 dollars down; November N.C., 24.61 dollars, 0.30 dollars down; January N.C., 24.79 dollars, 0.40 dollars down; March N.C., 26.15 dollars, 0.39 dollars down. Ashmouni: June, 19.80 dollars, unchanged; August, 18.25 dollars, unchanged; October N.C., 17.38 dollars, 0.15 dollars down; December N.C., 17.67 dollars, 0.17 dollars down; February N.C., 18.00 dollars, 0.20 dollars down; April N.C., 18.31 dollars, 0.21 dollars down.

Sakel.—We have had a succession of quiet markets, and prices have fluctuated within a narrow daily range with the tendency generally downward. The trade has kept entirely aloof, the few transactions effected being for the most part confined to operations of the jobbing variety, opened and closed at a few points difference either way. The demand from the consuming centres continues to be very poor and what little inquiry has come along has been principally for low grades. There is no change in the general situation since last we wrote, with

no new factor to influence the market either way. We accordingly have nothing to add to our previously expressed opinion: that the outlook is for dull and bearish markets in the immediate future.

The Sakel/Uppers new crop straddle (November/October) this week stands at 723 points, against 738 points last week and 1,178 points at this time last year.

Uppers.—The market for Uppers has exhibited the same characteristics as the Sakel market, but prices have fluctuated within an even more restricted range. Scarcely any interest has been shown by the trade, the demand has been very small and chiefly confined, as in the case of Sakel, to low grades. There has been heavy selling of June contracts, and it is expected that the tenders of Uppers against this delivery will be very large. With a prospective heavy crop progressing satisfactorily, we can see no encouragement to look for anything but bearish markets. Nothing has yet come to hand from America as to the adoption of the proposed import tax on long staple cottons, but the news is expected daily.

The Ashmouni/Americal new crop straddle (October/October) this week stands at 236 points, against 243 points last week and 290 points at this time last year.

The week's receipts amount to 56,848 kantars, against exports 67,752 kantars; the stock in Alexandria stands at 3,931,108 kantars.

Spot.—The market was closed to-day for the celebration of the Muslim New Year. The total turnover amounts to about 2,700 bales, of which we estimate 600 bales Sakellaridis, 1,900 bales Ashmouni and Zagora, 150 bales Pilion, and 50 bales other varieties.

Sakellaridis.—The demand has dwindled down to practically nil, and the amount of cotton of a desirable nature offering on the market is extremely limited; this applies particularly to the medium grades. There are still a few buyers for low grades and Sekina, but the prices offered are not attractive to holders of this cotton.

Ashmouni and Zagora.—The turnover in these varieties also shows a great decrease, and consists chiefly of low grade cotton which holders appear to be willing to liquidate at almost any price. Spot differences for the better grades remain unchanged.

Pilion.—A small business has been done in Good Fair/Fully Good Fair and Good at about last week's premiums.

Other Varieties.—A few lots of Nahda and Maarad changed hands.

Crop, 1930.—News received this week from all our interior branches points to continued good progress of the crop under favourable conditions of weather and temperature. The supply of water has been ample for all needs.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for May was 82,410 tons.

According to *Der Deutsche Fruchtgrosshandel* increased efforts are being made this year to develop exports of fresh fruit from Greece and the Government is taking all measures necessary to encourage successful propaganda abroad. Special attention will be given to fresh table grapes, exports of which in the past three years are reported to have increased by nearly three hundred per cent. The United Kingdom, Germany, Austria, and Switzerland are the principal countries to which it is intended to direct exports in the present season.

Notes of the Week.

The Belgrade Trial.

The acquittal of Dr. Matchek, the Croat leader, on the charge of conspiring against the existing régime in Yugoslavia can hardly fail to be in the interests of the country as a whole. Not only was the evidence against him personally of a particularly unconvincing nature, but the case for the prosecution generally was weakened by the fact, brought out in the course of the trial, that most of the evidence bearing on the political activities of the more important among the defendants had been obtained from some of the accused in prison when under torture. It would seem, however, to have been established that several of the younger prisoners had been guilty of illegal practices, if not of conspiracy, and these have been duly sentenced to varying terms of imprisonment. It is satisfactory to find that the Court has not allowed itself to be influenced by political motives, but has, as far as can be judged, arrived at its judgment strictly in accordance with the evidence. A different issue would not have been altogether surprising, as the trial was made a political occasion by the defence, the closing speeches of counsel, as well as of Dr. Matchek himself being almost exclusively political. In the circumstances his own courage, as well as that of his chief counsel, M. Trumbitch, in giving expression to the Croat political creed, when their words were certainly liable to be used in evidence against them, may prove to have done good. It may be possible to dragoon the Croats to the extent that they were kept under subjection in the Austro-Hungarian Empire, but a repetition of such conditions can hardly fulfil the obect that King Alexander is understood to have in view, a united Yugoslavia. With the presence of eight Croats in the Government something in the nature of a round-table conference of Serbs and Croats has been secured, and as no occasion for further bitterness has been afforded, as would have been the case if Dr. Matchek had been condemned, there may be ground for hoping that the present régime will ultimately evolve a satisfactory settlement of the Serbo-Croat question, which was, after all, the goal that the Dictatorship set itself. To attain this end the Croat insistence upon autonomy must clearly be kept within bounds.

Safeguarding the Institution.

The Egyptian Government has set itself to safeguard the Constitution by introducing a Bill which characterises as high treason any attempt to suspend Parliament or to institute an unconstitutional régime. Apart from such delicate questions as to whether responsibility, in such cases as the Yugoslav or the Egyptian Dictatorship, would rest with the King or with the Prime Minister or with the whole Cabinet and all who accepted the new order, the success of this measure will be watched with interest, as many countries besides Egypt have in recent years found that for one reason or another parliamentary institutions or particular Constitutions have left something to be desired. Although opinions will naturally differ on the subject of justification, it would be difficult to point to a single instance, the Pangalist régime in Greece notwithstanding, where the introduction of a dictatorship has been wholly frivolous and without serious cause. Roumania's recent experience suggests that laws and enactments offer no serious obstacles to a people bent on changing their mind; and, if the proposed Bill becomes law in Egypt, it is conceivable that, in the event of compelling circumstances, the Egyptian people or Parliament might decide to repeal it. The passage of such a Law, therefore, is apt to serve no other purpose than to provide scope for a vendetta between political parties on the resumption of constitutionalism. An English epigrammatist of the sixteenth century would seem to have settled the question when he wrote:

> Treason doth never prosper, what's the reason?
> Why, if it prosper, none dare call it treason.

Seneca, however, had anticipated him with the remark: *Prosperum ac felix scelus virtus vocatur.* The best safeguard for a Constitution is, after all, good government; for it is only when parliamentary institutions are abused or the administration causes popular confidence in constitutional government to be shaken that rival politicians are encouraged to seek relief in unconstitutional remedies. As we go to press, it is reported, that the Nahas Cabinet has set such store on this purely academic measure that it has offered its resignation on receiving an intimation that King Fuad will not agree to the introduction of the Bill.

The Greco-Turkish Agreement.

After seven years of intermittent negotiations, punctuated by periods of tension between the two parties, Greece and Turkey have reached agreement on the vexed subject of the exchange of populations. The details of the agreement, which has been reached by mutual concessions, are of less importance than the fact that at last a settlement has been arrived at and that the ground is now clear for a closer understanding and the establishment of normal friendly relations between the two countries. The agreement provides for the recognition of Constantinople Greeks as not liable to exchange, regulates the payment of compensation to Greeks and Turks who have been dispossessed of their property, where this is not actually returned to them, and deprives those Greeks who left Turkey with Ottoman passports granted by the pre-Republican régime of the right to return. Greece undertakes to pay to the International Commission for the Exchange of Populations the sum of £425,000, of which £150,000 will be devoted to the compensation of "established" Greeks in Constantinople, £150,000 for the compensation of "established" Muhammadans in Greece, and the balance, £125,000, will be paid to the Turkish Government in three instalments. The agreement constitutes an important landmark in the history of the two peoples and the statesmanship of the Ghazi Mustapha Kemal Pasha and of M. Venizelos can be relied upon to carry it to its logical conclusion, in a treaty of cordial relationship.

INDIAN NOTES

Conditions in India.

At the moment there would seem to be a more or less general, but perhaps only transitory, improvement in the situation in India. This improvement does not unfortunately extend to the frontier or to Bombay, but, as regards the rest of India, outbreaks of lawlessness have certainly diminished in number, and become less serious in character. Fighting on the frontier is not yet at an end; and the position in the Western Presidency is unsatisfactory. In Bombay city the so-called "War Council" is trying hard to intensify Congress activities by picketing shops and by other illegalities. To check these the Ordinance for the prevention of intimidation, picketing and boycotting was extended on Saturday last to Bombay city and to Guzerat. As was to be expected, the enforcement of the Ordinance is being strenuously resisted by the Congress with the result that many arrests have been made. It is early yet to form any definite opinion as to how the first volume of the Simon Report has been received in India. Indeed, the latest information suggests that most of the leaders of the various parties and communities are not saying much. No doubt, they are waiting for the second volume before committing themselves to anything very definite. It appears, however, to be clear that the Congress extremists will condemn Volume I out of hand, some of them having already expressed the opinion that it justifies the boycott. Nor do the moderates seem to be particularly favourable, so far as their views are known; but their attitude suggests disappointment rather than active antagonism. On the other hand, the Muslims are said to be greatly relieved, because the Report reaffirms what they regard as their rights. The Europeans are understood to approve of the Report generally, and particularly as regards the attitude of the Commission towards questions such as the future of the Army, Hindu-Muslim tension and communal electorates, and dyarchy.

The Nature of Dyarchy.

The Simon Commission has certainly succeeded in its attempt to make clear to English readers the nature and the working of that difficult feature of the reformed Indian Constitution which is known as dyarchy. This awkward word was not used by the late Mr. Montagu and Lord Chelmsford in their famous Report. Nor does it appear in either the Government of India Act of 1919, or in the rules made under that Statute. Its meaning has been defined as the operation, side by side, of two authorities with separate mainsprings. And, as the Commission explains, it was introduced into the Reforms scheme, because the framers of that scheme found that some division of provincial executive functions could not be avoided. The announcement of August 20, 1917, contemplated an early advance in the direction of the progressive realisation of responsible government. And, according to the Montagu-Chelmsford Report, it was in the Provinces where the first move in that direction ought to be made. But to introduce complete responsibility in the Provinces at one stroke was considered to be too risky: it could not be "given immediately without inviting a breakdown." A middle course was consequently decided upon. Those functions of government which, under the new scheme, had been classed as Provincial were subdivided into "Transferred" and "Reserved" subjects. The former were placed under ministerial control: the latter remained under official administration. This means that in each province the Provincial Government was divided into two parts. One part consisted of the Governor and his Executive Council, who were charged with the "Reserved" subjects. The other part consisted of Ministers, chosen by the Governor from the elected members of the provincial Legislative Council, to whom the care of the "Transferred" subjects was committed. Two authorities, with separate mainsprings, operating side by side were thus created. This was how, to quote the Simon Commission, "the novel distribution of political executive powers in the provinces which goes by the name of dyarchy" was introduced. It has been subjected during the past ten years to more criticism than any other feature of the reformed Constitution; and its latest critics, the Statutory Commissioners, do not seem to have a high opinion of it, although their description of it, and of its working, is strictly impartial.

The Provincial Legislative Councils.

As has been indicated, the Commissioners criticise dyarchy, but they have formed a good opinion of the Provincial Legislative Councils. They praise the way in which business is conducted in the Councils; they have a good word to say for the debating; and, generally, they regard the Councils as useful bodies. They recognise that opposition to the Government has not always shown itself to be either restrained or reasonable. But this irresponsible spirit they attribute largely to the defects of dyarchy. To the practical needs of administrative efficiency the Councils have sometimes shown themselves to be indifferent. But on the other hand they have also in many instances exerted a useful influence, and thrown an informing light upon the proceedings of the Government. It has to be remembered that there are nine Governors' Provinces, each with a Legislative Council, and the dyarchic form of government. It is, however, only in two of them that the Governor has found it to be necessary to make extensive use of his exceptional powers. Apart from these, "the reformed Councils have actually worked, and they have worked better certainly than many anticipated at their inception, though not entirely in the manner in which the authors of dyarchy intended." The great difficulty created by dyarchy seems to be that the theory of the subject has not been translated into practice. The intention was to establish, within a certain range, responsibility to an elected legislature. There was to be complete responsibility of Ministers in a certain definite field and in that field only. But this fundamental conception of the dyarchic system has, the Commissioners hold, become hopelessly obscured. The two halves of the Government have tended to come together; and there has been a tendency on the part of the Councils to think of Ministers as on a not very different footing from that of Executive Councillors. The ties between Ministers and their supporters have thus been weakened; and there have likewise been reactions on the Reserved side.

THURSDAY, JUNE 19, 1930.

KING CAROL II OF ROUMANIA.

To appreciate the inwardness of King Carol's accession to the Throne it is necessary to take into consideration the political situation in Roumania since the War. From the days when a surreptitious entry into his new kingdom earned for Prince Charles of Hohenzollern, among his enemies, the taunt of being "Bratianu's lackey," Bratianu has been a name to conjure with in Roumania. King Charles' inevitable sympathy with Ion Bratianu and the Liberal Party, however, never caused him to waver in his devotion to constitutional principles, and under his guidance the country settled down to a more or less successful application of the two-party system, with Governments alternating between the Liberals and the Conservatives. The Bratianu prestige remained; but throughout his long reign of forty-eight years King Charles was the leading factor in Roumanian politics. The position that he occupied could not be expected to pass immediately to his successor, King Ferdinand, and as the Conservative Party had been discredited by its attitude in the War, it was only natural that the Second Bratianu, who was then reigning over the Liberals, should conceive it to be alike his duty and his destiny to play the leading rôle in the country. In the meantime, however, the population and territory of Roumania had been more than doubled as a result of the War, and the name of Bratianu did not carry the same weight in the new provinces as it did in the Old Kingdom. With a profound and, no doubt, perfectly sincere belief in his mission, the Second Bratianu proceeded to correct this anomaly by the "making" of elections, a procedure on which the Third Bratianu, when the Liberal mantle had fallen upon him, improved by virtue of possessing a little finger thicker than his brother's loins. The inevitable revolt of the Roumanian people followed; in November 1928 the new forces in the country, represented by the Transylvanians and the Peasant Party, asserted themselves, and Dr. Maniu became Prime Minister. It is probably correct to say that, until the new Government had been in office for some time, the full extent of the hold established by the Bratianus and the Liberals on the economic life of the country was not fully appreciated. Be that as it may, eighteen months in office found the scales still weighted so heavily against the National-Peasant Government in its task of substituting administration in the interests of the country for administration solely to the advantage of a single Party, that Dr. Maniu realized that, with an invertebrate Council of Regency, he could not count upon a fair trial for the new order.

The position in Roumania, therefore, during the last few months has been that the Government has been menaced with the risk of a return to the personal régime of the Liberals, with the certainty that this time their hold on the political system would be more securely riveted. In view of the youthfulness of King Michael the only opportunity of escape from this danger and from the generally unstable condition of things in the country lay with Prince Carol. As a member of the Council of Regency he could be relied upon to stiffen its attitude towards domination from outside; as King he might conceivably fill the rôle of his grandfather as an impartial arbiter between and master of the political parties and might save the country from possible constitutional experiments brought about by the demoralization of a long regency. At the same time the Roumanian people as a whole had worked themselves into a frame of mind that would welcome any radical change. Things, they knew, were not going well; yet a mere swing of the party pendulum offered no prospect of relief, even if it did not actually promise additional troubles. As the first Roumanian-born Prince, Carol had always been sure of a warm place in the people's affections, and they could not be expected to adopt other than a Roumanian attitude towards his adventures, tempered, perhaps, with the reflexion that there were various aspects of the story about which they knew nothing. In these circumstances it is not to be wondered at that Dr. Maniu's Government began to entertain the idea of Prince Carol's return to Roumania—with an increasing belief in its efficacy as M. Bratianu launched fresh attacks on the Government and on the Prince—or that the Roumanian people welcomed him with enthusiasm on his unexpected arrival.

Very shortly, however, the shouting will be over, and to the spectacular triumph of Prince Carol's return have already succeeded difficult days of political reorganization. If his popularity is not to prove an embarrassment, King Carol will have to show himself possessed of a considerable degree of statecraft, for there can be no doubt that expectation runs high among the people that his accession will entail the solution of their troubles. The instinct that, apparently, prompted him to desire a Coalition Cabinet was sound, but, so far, he has not been able to mould the political forces of the Kingdom to his way of thinking. In this matter the strength of the National-Peasant Party has proved as much of an obstacle as the hostility of the Liberals, and in the end Dr. Maniu had to be invited to re-constitute his Government with the inclusion of some Ministers who for one reason or another had previously resigned. Thus the programme to which the National-Peasants stand committed remains in force, but with this important difference, that the Liberals, whose solidarity and political pull had previously endangered the success of the programme, have been weakened by the turn of events. To talk of the disintegration of the Liberal Party would be premature in view of the notorious economic hold that the Party machinery has over its members—a hold which has brought dissidents to heel on previous occasions. In the long run the strength and prosperity of Roumania depend on the unity of the people, and King Carol can hardly wish to see a state of affairs brought about in which the Old Kingdom and the new Provinces take it in turns to exchange the rôles of top-dog and under-dog. His difficulties, moreover, are not confined to the political sphere, and, in spite of the proved affection of the Roumanian people, he must realize that lasting success as a Sovereign will not only demand shrewdness and strength of character, but will also require him "to scorn delights and live laborious days."

PALESTINE.

Jerusalem, May 31.

Jewish Grievances.

Even to the anti-Zionist it would probably be impossible to avoid a little commiseration for the Jews of Palestine at the repeated blows of misfortune which are falling upon them in the political sphere. They have been sudden and with little interval between for mental recovery. Beginning with the appointment of Sir John Hope Simpson, there quickly followed the "Ban on Jewish Immigration"; then the local Government's memorandum explaining that immigration was stopped lest it should do harm to the Arabs' economic welfare, and that Sir John Simpson was here to make recommendations how most effectively to muzzle all Jewish effort that might work contrary to Arab interests (this, of course, is not quite what the Government said, but what the Jews have read between the lines); and a few days later came the new "White Paper" containing the Home Government's comments to the "Permanent Mandates Commission" on the Shaw Commission's findings, in the course of which comments substantial assent is given to the Majority's recommendations, regardless of the less harsh interpretations of Mr. Snell. To pile on the misery for local Jewry is its knowledge that the British representatives before the forthcoming meeting of the Mandates Commission will be Mr. Luke and Mr. T. I. K. Lloyd (styled respectively by local Jewry "the hero" and "the author" of the Report); and to-day comes the official intimation that the High Commissioner "in exercise of the powers invested in him" has remitted the sentences of 22 of the 25 Arabs condemned to death for their share in the massacres at Hebron and Safad last August. To the Arabs this all appears only as belated acts of justice—or merely a course of drugs to counteract any irritation aroused by the Arab Delegation's return with empty pockets; to the Jews it is an abject capitulation to violence.

It is a poor joke, but it is the Jews' own. When Balfour met Herzl in the Abode of the Blest, Herzl's first comment was, "Why this hurry?" "Better," was the answer, "better a Declaration without Balfour than a Balfour without a Declaration!" None the less, a callous onlooker finds it easy to see still almost unlimited scope for Zionist achievements in Palestine even in the face of a measure of legislation protecting Arab agricultural interests; though from the prevailing tone of Jewish plaints one might be led to suppose that the Jewish Palestine structure must now shrivel at the root (their metaphor). Even the coolest-minded of the local Jewish organs—the English supplement to *Davar*, the paper run by the General Federation of Jewish Labour—thus comments on the Simpson Mission:

> Common courtesy and helpfulness in supplying all the desired data cannot obviate the deep-seated lack of confidence with which the goal set to this inquiry by the Colonial Office must be viewed. Taken with its official context, the mission cannot but have been intended to provide a scientific guise for that liquidation of the Balfour Declaration policy which seems to have been embarked upon.

And to show how wrong Sir John Simpson must be if he bases his findings on a prosaic estimate of possibilities backed only by text-books' economics, the same paper goes on to say:

> The design of those who have sent Sir John Hope Simpson on his errand will necessarily come to grips with the iron determination of a mass movement for whom the Palestine undertaking is not a mere scientific proposition, nor an experiment in colonisation to be carried on or abandoned at will, but a matter of life and death for a people. The inquiry will be no more than another act of the farce unless it includes in its background the origins of this movement, its aims and contents, its psychology and creative capacity, judged by its constructive record. The significance of the elements of faith and will-power cannot be here overestimated. Science in the narrow sense of the term, detached from the human factor, would never have predicted what has already been achieved in this stiff-necked land, nor would it be capable now of envisaging the potentialities of the future. It was only fifty years ago that the celebrated geographer of his time, Elisée Reclus, dismissed this country as good for nothing. . . . Thirty years ago even the late Achad Haam, who ought to have known better, rejected as utterly impracticable the idea that a real flesh and blood Jewish peasant class might develop in Palestine. And yet the impossible has come to pass—a portent for the future.

The Selection of Immigrants.

In view of the faint hint of a threat contained in Para. 6 of the "White Paper" on the subject of immigrants entering Palestine under the Labour Schedule, in connexion with which the Shaw Commission adversely commented on the condition of things, vouched for by no less a person that the Chief Immigration Officer, by which prospective immigrants must be politically sound in the eyes of the General Federation of Jewish Labour, regardless of their suitability for Palestine's requirements—in view of the possibility that the Home Government might have taken the Chief Immigration Officer's evidence seriously, the Palestine Executive of the Jewish Agency has now published a letter sent earlier to the local Government, flatly denying that the G.F.J.L. plays the slightest part, directly or indirectly, in the selection of Jewish immigrants. The Executive thus describes the actual procedure: [After the total number of immigrants for the ensuing six months has been authorised by the Chief Immigration Officer] the [corresponding number of] blank certificates are transmitted by the Chief Immigration Officer to the Palestine Zionist Executive, who forward them to the "Palestine Offices" which they maintain in the various countries of emigration, distributing the certificates between these offices on the basis of information received as to the number of suitable candidates available for the particular labour requirements. The Chief Immigration Officer is advised by the Executive of this allocation, so that he may notify the Consular Officer concerned.

> The Managers of the Palestine Offices are responsible to the Executive for the individual allocation of the certificates, acting in consultation with local committees representing all the sections of the Zionist movement, and guided by instructions from the Headquarters of the Executive in Jerusalem. Should circumstances demand special investigations, the Executive sends one of its own officials from Jerusalem personally to control the allocation of certificates. This was done, for example, when immigration was reopened at the close of the period of economic depression, a copy of the instructions to the Executive's delegate being furnished to the Chief Immigration Officer.
>
> Any inquiries made by the Executive, its agents, or its advisers with regard to the affiliations of would-be immigrants, have in view the selection of persons best fitted to meet the labour needs of Palestine.
>
> The whole procedure operates quite openly and should have been known to the Chief Immigration Officer, whose duty it was before giving evidence to verify his information from responsible records. Mr. Snell, who gave a substantially accurate account of the pro-

cedure as recorded on page 175 of the Report, evidently experienced no difficulty in ascertaining the facts.

The Chief Immigration Officer's misrepresentation has already done grave harm to Jewish interests, through the fact that the Commissioners based their conclusions on the subject of immigration in a large, if not in an exclusive measure, upon the information submitted to them [in camera] by the Chief Immigration Officer.

IRAQ.

Baghdad, May 28.

King Faisal.

King Faisal leaves Baghdad next week on a visit to Europe, undertaken partly for the sake of his health and partly in order that he may discuss Iraqi affairs in London. During his absence the brother of King Faisal, ex-King Ali, will officiate as regent. The King will be accompanied to Europe by the Prime Minister, Nouri Pasha as Said, as well as by his private Secretary and his A.D.C. He expects to be absent about three months.

Financial and Land Missions.

Sir Hilton Young, accompanied by a Secretary, has arrived in Baghdad on an advisory mission to the Iraq Government, which is to consult him on the financial situation in general, with special reference to the Budget and to the proposed new Iraqi coinage system. It will be remembered that Sir Hilton, in company with Mr. R. V. Vernon, came to Iraq on a similar mission in 1925. The local Press takes a gloomy view of this visit, which it more than hints will end only in the promulgation of "another long deferred and useless report." Sir Hilton Young was the guest of honour at a dinner given on May 25 by the Minister of Finance

Sir Ernest Dowson has left Iraq on the completion of his mission. He has made a long and exhaustive inquiry into land problems in this country, and the recommendations which he will embody in his report on this difficult subject are awaited here with the greatest interest.

Foreign Relations.

The first Iraqi Legation in Persia has been established at Teheran, and it is hoped that a treaty or agreement between Iraq and Persia will follow. Jaafar Pasha al Askari, Minister of Defence, has just returned from a brief visit by air to Teheran, where he went on a special mission from the Iraq Government to negotiate certain matters connected with Iraq's transit trade with Persia.

The French Consul-General here is to be raised to the status of Chargé d'Affaires, a change made not long ago in the case of the German representative also.

It is reported that Iraq and Syria are to make mutual reductions in customs duties on goods exported from one country to the other.

Commercial News.

The increasing number of failures and bankruptcies of merchants in Iraq, and particularly in Baghdad, is causing a good deal of anxiety at a time of general financial depression. Officially declared bankruptcies number twenty since last November, and the number of reported failures, according to figures compiled by the Baghdad Chamber of Commerce, is 81 for the same period. The Chamber of Commerce is arranging to hold at the end of May a joint conference of the Chambers of Commerce of Baghdad, Mosul and Basrah—the first conference of its kind in Iraq.

The date crop of 1930 gives promise of being an excellent one, but the demand is likely to be smaller than the supply. The increase of duty on dates imported into Australia will mean a smaller sale there, and large stocks still remain on hand in British and Mediterranean ports.

This year's Tigris flood has been a failure, the average level during March being lower by a good deal than that recorded in the same month for 24 years past. Large areas of crops would have been lost, if they had depended on the river for irrigation, but the newly-installed mechanical pumps have saved the situation for many farmers.

General News.

Miss Amy Johnson reached Baghdad on her way to Australia on May 8, having flown from London in four days—in itself a remarkable achievement, especially as she crossed the Taurus in mist and the Syrian desert in a sandstorm. The weather on the day of her arrival here was most unpropitious, and grave doubts were felt by experts over her safety in the gale. Actually she was forced to descend half-way from Aleppo, and having covered her engine with tarpaulin to keep out the sand spent two lonely hours in the desert sitting on the tail of her aeroplane to keep it down. When the wind slackened she took off again, and made an unostentatious landing in Baghdad late in the afternoon, to leave the next morning at six for Bunder Abbas. Such pluck and endurance deserved their ultimate success. It is worth remarking that Iraqis here have been following Miss Johnson's flight with the greatest interest and admiration.

Ahmed Pasha as Sana, formerly Mutasarrif of Basrah, has died at the age of 85. He was a sincere friend of England during the early days of the British Occupation, was a warm supporter of Sir Percy Cox, and became a Minister without portfolio in the first Iraqi Government. He then became Mutasarrif of Basrah, which post he left to become a senator in 1928, resigning his seat later on grounds of advancing years. Ahmad Pasha's younger son is now Mutasarrif of Baghdad.

An interesting sign of the times was the first annual Sports Day held last month at the Central School for Girls. This School, which has made remarkable progress under the American lady who directs it with vision and energy, has taken the definite step forward of providing physical culture and games as part of the ordinary curriculum for Muslim girls. The programme consisted of drill, relay races, high jump, sack and three-legged races, long-

distance throwing, folk-dancing and basket ball. A number of guests, including Lady Humphrys, had been invited to watch the sports, and the girls, wearing short kilted skirts and white jumpers, competed with the utmost enthusiasm and spirit—a change from veiled lethargy which in itself heralds a new era for Iraqi womankind.

A furious and exciting fight between two rival bands of Kurdish coolies disturbed the peace of Baghdad for a few minutes, and caused all the shops and khans in Bank Street to be hurriedly closed. The quarrel arose over the unloading of a cargo boat at the wharf. Order was quickly restored on the arrival of the police, who separated the combatants, dealt with the wounded, and took off three bus-loads of delinquents to the police station.

Belgrade, June 6.

The Croat Trial.

The last week of the Croat Trial by the Court for the Defence of the State has been marked by greater interest and liveliness, especially when the speeches of Counsel for M. Matchek, ex-President of the Croat Peasant Party, began. It was not merely an occasion for displaying oratorical talent, but a question of putting clearly before public opinion, much more than before the Court, the standpoint that the political parties represented by M. Matchek's Counsel take in regard to the whole Croat question, as distinct from his individual case. The declarations were necessary, because for a long time there had been no inter-party discussion, and the present trial presented the most suitable opportunity for such statements. The lawyers who volunteered to speak in M. Matchek's defence belong mainly to three political groups: the Croat parties (Federalists and Raditchists), the Serbs from Croatia (Pribitchevitch's followers) and the representatives of the purely Serb Opposition (Serbian Agrarians and Democrats). The Croat parties directed their main efforts to showing that there was, and could be, no other leader for them than M. Matchek—that, therefore, those who would like to have an agreement with the Croats could have it only through him, that "no agreement was possible through the gates of a prison," and that, though there were rumours of a possible amnesty for M. Matchek, it was his acquittal in court that they required. They complained of the lack of understanding and even of efforts to understand the Croat question on the part of the Serbs, and alleged that to be a Croat meant by itself to be a suspect person. It was to this lack of sympathetic understanding on the part of the Serb Governments which succeeded each other during the years after the War that the serious State crisis prevailing in Yugoslavia on account of the Croat question was due. They issued a warning against a repetition of the methods which brought Austria-Hungary to ruin. The Croat Serbs certainly showed the greatest embitterment against the present state of things. They professed full allegiance to M. Matchek and full unity with the Croats among whom they live. Their utterances at the same time showed their intentions to maintain the so-called "Pretchanski Front," or united and hostile attitude of the Croats and Serbs living in Croatia—against the Serbs of Serbia proper. Their embitterment can, however, be explained by the fact that their leader M. Pribitchevitch has been interned since May 1929, without any accusations brought against him. A protest to this effect has been issued by his family and by all the 31 lawyers participating in the Croat Trial. The third group—representatives of purely Serb parties—was the most interesting and the most gratifying at the same time. They fully joined in the indignation about the methods which were used in connexion with the trial, warning the Court not to allow politics to influence justice ("when politics enter through the door justice vanishes through the window") and recommended the Court to reprove publicly the ways of the Zagreb police, which, they held, were to be regarded as the ways of the Dictatorship towards the Croats. They professed their attachment to the principles of justice and freedom and expressed the hope that Yugoslavia would return to democratic rule at an early date. National and State unity, they said, was the ideal of Serbs and Croats alike, but the present methods certainly were not contributing to further this unity. M. Matchek's eventual acquittal would render a great service to the country, as it would bring political peace, while his sentence would be a shame and a danger. They urged also the attainment of internal consolidation before it was too late, because the Italian danger was increasing rapidly and ought to find Yugoslavia prepared for all eventualities, politically, as she is prepared in the military sphere.

The speeches of the Serb lawyers gave the impression of a first olive branch offered publicly to the Croats. M. Trumbitch, the prominent Croat statesman who was First Counsel for M. Matchek, though he has not practised as a lawyer since the War, joined in the opinions of his Croat colleagues. He drew a striking parallel between the situation of the Croats in 1925 and the present situation, which, he said, showed no change whatsoever, because now M. Matchek is being accused of the same offences against the State and in the same way—even on the basis of the same paragraph 1 of the D.O.R.A. as was Stephan Raditch in 1925, though five years had elapsed and though a new régime has been instituted, which according to the intentions of the King was to destroy all that interfered with the good of the State. He said that the present developments, like those of 1925, were links of the same chain of anti-Croat tendencies in the Yugoslav State. M. Trumbitch towards the end mitigated his bitterness by expressing his belief in the justice of the judges even in the present exceptional conditions. In the meantime the Government has taken another step along the line that it seems to have adopted lately. The nomination of eight new members to the Legislative Advisory Council considerably adds to its size, and—if rumours are true—further increases of this body may be expected at an early date. Such an enlarged body would form the nucleus of a body, which, though nominated by the King, would tend to represent not only the various political parties by dissidents, gained over by the Government. The first appointments of such members are a happy choice of the right men for such a body. It would only be necessary to increase, in addition to the number of its members, the competence of the Legislative Advisory Council. At present it is being consulted only on matters of secondary importance, while the most important laws are presented to the King by the respective Ministers and Prime Minister directly, without being submitted to the Legislative Advisory Council, whose meetings are, therefore, not very frequent.

friendly enough to allow of an important manifestation, half cultural, half economic, which certainly serves the purposes of friendly intercourse between the two countries. Greek merchants of Salonika, accompanied by several deputies and ex-Ministers and the Archbishop of Salonika, Mgr. Gennadios, came to Belgrade, where they were received by various trade and cultural institutions as well as by the Ministers of Trade and Foreign Affairs. They visited a variety of State and other trade establishments, and continued their journey to Zabreb. The official pretext for their visit to Belgrade was the commemoration of the Greek poet Velestinlis (Riga de Ferro), who was executed by the Turks in Belgrade. Apart from this sentimental reason, many useful arrangements have been discussed, for the improvement of trade between Yugoslavia and Greece, and especially with Salonika, which remains the natural port for the whole of Southern Serbia.

BULGARIA.

Sofia, June 3.

Bulgaria and a European Federation.

The memorandum of M. Briand on a federal union of European States has made little impression in Bulgaria. Bulgarian opinion welcomed it coldly and sceptically, and the Press, where it did deign to comment, represented it as merely a means of assuring the security of France and of her Allies by perpetuating the territorial situation arising out of the Peace Treaties of 1919.

Official circles, however, differ from this general judgment and show complete approval of M. Briand's initiative, without believing in the possibility of its realisation.

Bulgaria and Geneva.

Some months ago, it may be recalled, a petition was taken to Geneva by three delegates of the Macedonian population, M. Anastassoff, M. Chaleff, and M. Ilieff, who explained the intolerable situation in which the Bulgarian minority in Yugoslavia were living. The Yugoslav Foreign Minister, M. Marinkovitch, having announced in the Press that this petition had been rejected by the Committee of Three charged with the duty of supervising the régime of ethnic and religious minorities, and that this rejection was impelled by the narrow connexion which existed between this action and that of the Revolutionary Macedonian Committee, the delegates in question sent to the Bulgarian Press a letter in which they deny the assertion of M. Marinkovitch and state that the petition is following its course, that it has by no means been rejected, its signatories never having had any relation with the Revolutionary Committee, and that to facilitate the examination they have recently sent to the Powers signing the Treaty of Saint-Germain a memorandum containing full details of Yugoslav atrocities. In this memorandum the Macedonian delegates ask for the organisation of an impartial international inquiry, which would portray the real situation in Macedonia.

ALBANIA.

Tirana, May 28.

The Census.

The Census was duly taken last Sunday, and with the utmost thoroughness. One woke up to find sentries, equipped with steel helmets and rifles, posted everywhere, and with the exception of high officials, diplomatists, etc., no one was permitted to leave his house before 6.30 a.m., when the firing of a gun announced the end of the proceedings. Even the colour of one's eyes and the number of languages one spoke were noted. It is to be hoped that the Government will compile other statistics with equal thoroughness. The need for so doing is fully realised, but in a country where, five years ago, there was everything to be done, statistics are, necessarily, still scarce and inadequate. The astonishing thing is that so much has been done already—far more than is generally supposed in western Europe.

New Appointments.

The Italian Minister, Signor Ugo Sola, is leaving Tirana, and his place will be taken by the Marchese Antonio Meli Lupi di Soragna, present chief of the Albanian section of the Italian Foreign Office. Signor Sola has been here since 1927, and concluded the Treaty of Alliance. The change will probably take place at the end of June.

The Cabinet has been reinforced by the appointment of M. Izet Dibra to the Ministry of Public Works, a portfolio held *ad interim* since March 6 by M. Hil Mosi, Minister of Education. M. Dibra has not previously held a Cabinet appointment, although there have been several other Ministers of his name.

The vacancy in the British Inspectorate of Gendarmerie caused by the resignation some months ago, owing to ill-health, of Major Willoughy, has been filled, somewhat unexpectedly, by the appointment of Mr. R. T. Cripps with the rank of Major. Mr. Cripps has been in the country for a year or more, in the service of the Anglo-Persian Oil Company, at Fieri. It seems that, although that Company has not yet found good quality oil in commercial quantities, there is no truth in the report that it is withdrawing from Albania.

Miscellaneous News.

For the last two months, with brief intervals, the weather has been exceptionally wet and cool. Heavy rain has fallen. But gardens have benefited, notably the Public Garden in front of the Palace, which is a mass of immense roses.

Some days ago, the *Shqipëria e re* (published in Bucharest) contained an account of an interview which one of its reporters had had with M. Reuf Fitzo, Minister for Foreign Affairs and of the Interior, in which it was alleged that the Minister had spoken against the Italians in Albania. When the account appeared, the Minister indignantly repudiated the allegation, and the incident closed. It is a pity that, when there is so much misconception abroad of Italy's relations with Albania, the *Shqipëria e re* should have been so tactless.

Italians in Albania.

With regard to the Italians in Albanian (some 245 in number) the position is as follows :—

Eight Italians are attached to the Ministry of National Economy, of whom four are paid respectively by the Albanian Government 32, 32, 24, and 20 napoleons a month, and the others by Italy. (A napoleon is equivalent roughly to 16 shillings.)

One Italian Adviser and 28 organisers are attached to the Ministry of Finance, of whom only the Adviser is paid (56 napoleons a month) by the Albanian Government.

Thirty-nine Italians are attached to the Ministry of Education, as Organisers of Physical Training (12), teachers in the Professional Schools at Korch, Gynokastra, Berat, and Shkodra (22), and so forth. All of them are paid by the Italian Government, and receive nothing from Albania.

One Italian Director-General and 46 engineers are attached to the Ministry of Public Works. The Director-General receives 56, and the engineers (each) 15 napoleons per month from the Albanian Government.

One hundred Italian officers are attached to the Albanian Army, including General Pariani and his staff

CENTRAL ASIAN SOCIETY
(in which is incorporated The Persia Society.)
Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.
The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.
Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

Digitized by Google

(5), 8 attached to Albanian G.H.Q., 67 Instructors in the Military Schools or attached to various units, and 20 officers hold command, namely, the Commanders of the three groups into which the Army is divided, and the Commandant of the Military School at Shkodra, and they are responsible to the Albanian Commander-in-Chief, General Aranitasi. All these officers are paid exclusively by the Italian Government.

Three Italians are attached to the Albanian Navy, which exists to suppress smuggling, among its other duties, and cannot be said to exceed the requirements of the State. These three officers receive respectively from the Albanian Government 40, 25, and 25 napoleons per month.

One Italian has been entrusted with the organisation of Harbour services, and receives 40 napoleons a month from the Albanian Government.

Eighteen Italians are engaged in a Cadastral Survey of the country under a contract signed in 1927. The Albanian Government contributes 1,000 napoleons *per annum* only.

In view of the immense amount of work which has to be done, these numbers do not seem excessive. When it is remembered that the cost of living is very high and that, therefore, the Italians spend a large amount of money in the country, it cannot be said that their presence constitutes a financial drain upon the country.

EGYPT.

Alexandria, June 13.

Extreme Heat.

The weather this week has been oppressively hot even for Egypt, and there is a visible wilting on the part of the population, native and foreign. It is an extraordinary thing that Egyptians, born and bred in this country, appear to feel extreme heat just as badly as do Europeans who have only spent a short time here. Temperatures in Cairo have varied surprisingly, with Monday, Thursday, and Friday under the one hundred mark and Tuesday and Wednesday rising to one hundred and eight in the shade. A very unusual fatality occurred on Wednesday, when two women passengers on the Upper Egypt express died of heart failure following extreme heat. One of the women was a European lady, travelling first class, and the other was an Egyptian second-class passenger. When the train left Shamman, south of Assuan, just after midday, the ladies complained of the heat and when it reached Sohag later in the afternoon they were both found dead in their carriages, where the temperature had risen to the astonishing figure of 125 degrees Fahrenheit.

The heat is driving people out of Cairo earlier than was expected, and the Residency will move to Alexandria one week earlier than was previously announced. The American, German, and Swedish Legations have already left. It is understood that the High Commissioner will proceed to England on leave at the beginning of August. Lady Loraine leaves on June 21.

The Cotton Question.

A bitter controversy is being waged in the local Press now concerning the Government's cotton policy. Certain circles, which it is not possible to call disinterested, are doing their utmost to convince the unhappy Minister of Finance that the only solution of the difficulty is to restrict the area under cotton and to give an undertaking not to sell any of the Government holding for at least three years. The same circles are agitating for an increase in the Customs dues on imported wheat, flour and rice. Their object seems obvious. They are for the most part large landowners and wish the area under cotton to be restricted, so that they can grow other crops, which, according to their little plan, will rise in price following an increase in import duties.

The other side of the question is put by leading merchants, who suggest that no restriction at all should be put on cotton growing. Their idea is that it is better to sell, say, 10,000,000 kantars of cotton at 20 dollars per kantar than 6,000,000 kantars of cotton at 24 dollars, or whatever the prices would be. In this view they are supported by Prince Omar Toussoun, who has written a letter to the Minister of Finance emphasising his views. Prince Omar is a highly influential man, and it is probable that some notice will be taken of his letter.

The question of exorbitant rents has been studiously avoided by nearly everybody, as the people who are the main sufferers from that evil, do not, for the most part, know how to write, and certainly have no champions amongst local newspaper men.

The Minister of Finance will make a pronouncement on the subject in the Chamber of Deputies on Monday, although it cannot be expected that he will have a solution to offer until Professor Todd has made his report.

Prosecution of Cabinet Ministers.

The draft of the law regarding the prosecution of Cabinet Ministers, framed to make Egypt safe for democracy and the Wafd, is still at Abdin Palace. It is stated, both publicly and privately, that King Fuad is not at all pleased with the Bill and that he has refused to give his consent. It would hardly be surprising if this were the case, inasmuch as it was a decree bearing his Majesty's signature which turned out the Wafd two years ago and brought in the Dictator. The Wafd's action, on the other hand, in promoting a quarrel with the Crown is more difficult to explain. Their position after the Delegation's return could not have been more secure. They had most of the country behind them, and the nation is genuinely sick of politics. Had the Government been content to drop all such controversial subjects and concentrated upon getting through some of the urgent domestic internal reforms, which the country needs so badly, its position at the beginning of the next Parliamentary session would have been invincible. As things are, it has exposed itself to the charge of concentrating on legislation solely for its own protection, such as the Prosecution of Cabinet Ministers Bill and the new Press Law, while it merely talks about economic reforms. It is thought here that the dispute concerning the Cabinet Ministers Bill may have really serious results.

The Albanian Government has decided to create a post of permanent delegate to the League of Nations, and has appointed to this office M. Leo Jurti.

General Gouraud, Military Governor of Paris, was received by Mustapha Kemal Pasha, President of the Turkish Republic, in Ankara on June 5.

The betrothals are announced from Berlin of the Princesses Cecilia and Sophie, daughters of Prince Andrew of Greece and his wife, Princess Alice, formerly Princess of Battenberg. Princess Cecilia, who is 19, is to marry the Hereditary Grand Duke George Donatus, eldest son of the Grand Duke Ernst Ludwig of Hesse. Princess Sophie, who is in her 17th year, will marry the Hereditary Grand Duke's cousin, Prince Christopher, son of the Landgarf of Hesse.

The Yugoslav Minister in Sofia, M. Neshitch, is to be transferred to Ankara. M. Neshitch was specially known as a warm friend of the Slavs and is a champion of a policy of *rapprochement* with Bulgaria.

The Palestine Government on June 8 suppressed the Hebrew daily newspaper *Doar Hayom* and two Arabic newspapers, *Falastin* and *Jamia al Arabiya*. The *Doar Hayom* is the organ of the extreme Revisionist element within Zionism; the *Jamia al Arabiya* is regarded as closely connected with the Grand Mufti's party in local politics.

The old British cemetery in Abdel Moneim Street, Alexandria, was deconsecrated on May 29 by the Right Rev. the Bishop of Egypt and the Sudan. The eleven bodies buried there were reinterred in the British Military Cemetery at Chatby. The Abdel Moneim cemetery was originally part of the garden attached to the house of Henry Salt, the British Consul-General in Alexandria, who twice explored Abyssinia in the early years of the nineteenth century.

The Bill for preserving the Egyptian Constitution against possible infringement in the future was approved on May 31 by the Cabinet and submitted to King Fuad. The penalties for suspending Parliament are divided into two categories. The maximum penalty is penal servitude for life with a fine of £E10,000, the minimum three years' hard labour and a fine of £E1,000. The second category contains penalties for infringing various articles of the Constitution, consisting of terms of imprisonment and fines ranging from £E500 to £E5,000.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 29.

Conventional Acting Parts.

There is talk among those who get up plays of good acting parts and poor acting parts. The watcher in India learns to recognise a number of conventional or stereotyped parts. It is in the nature of things that, however good such may be as parts when they are new, they are very poor parts when they are old. The Council of the National Liberal Federation, in that statement from which I quoted last week, were acting in a very old part, when, in dealing with the Press Ordinance, they found very much stronger language to use against the Government than against the section of the Press that, as the Council put it, "has recently indulged in inflammatory language," the truth being that there is not a word of exaggeration in the next words I happened to read on the subject of the re-enactment of the Press Act. They occurred in the leading article in THE NEAR EAST AND INDIA of May 8: "Since 1922, when the Press Act was repealed, the newspapers have been increasingly reckless and dangerous. They have maintained an unending stream of revolutionary propaganda deliberately calculated to excite the people against the Government." That is the truth, and one cannot but ask whether it was not for the head of the Government to comment, publicly and sharply, on the *suggestio falsi* in the Council's "feeling that Government should have warned the Press against such writings." Those words, read, say, in America, would convey the impression that the Council believe that such a warning would have been attended to. It knows how utterly false that belief is: it knows that it is no man's belief.

Another Acting Part.

The present head of the Government *is* one ready to depart from the usual rule of silence on the part of the Viceroy, and to rebuke a public man who has tampered with the truth. It is well done; but would it not be better done, if the language used were much sharper? One of the oldest and most familiar of the Indian politicians' acting parts, is to cover up every other man's sin, when there has been a riot, with "protests" against the ruthless violence used by the police in quelling the riot. No matter how strong a restraint the police may have imposed on themselves at any time, some politician, or dozens of them, catching at straws, having no shred of evidence, will denounce the brutality of the police. They have never a word to say but that—that the police used brutal violence in quelling the riot. They never refrain; they are never ashamed to trot that old thing out again. It is a stereotyped part. The last to play it was Pandit Hridaynath Kunzru. The Viceroy has publicly rebuked him, but, one thinks, not sharply enough, in a letter that has just been published. "His Excellency has wished me," the Private Secretary has written to the Pandit, "to call attention to certain passages in your letter of resignation from the Legislative Assembly in which you speak of brutalities perpetrated by the police and of resentment caused throughout the country by such conduct." To rebuke the Pandit was well done; but one cannot but think that the occasion called for very much sharper language. It is a thing that the Indian politicians never hear.

Dr. Suhrawardy's Statement.

The kind of language to use is such language as Dr. Suhrawardy has just used in a Press interview. "The Round Table Conference," he has said, "might as well be scrapped, if the Liberals insist on further declarations by the Viceroy; for, after all, the intermediate step of the Round Table Conference was introduced for the benefit of the boycotters of the Simon Commission, and if they do not care to avail themselves of the opportunity, it might as well be withdrawn and His Majesty's Government may save much valuable time, and at once proceed to the next stage of the appointment of the Joint Parliamentary Committee." If the Government, instead of saying again and again, in other words: "Do come to our Conference," were to say: "The Round Table Conference that it was announced would be held in London with representatives of the Princes and Chiefs, will be held, but no Conference will be held with representatives from British India," it would teach the British Indian politicians the sharp lesson that there is so much need for them to be taught.

An Ancillary Conference.

Dr. Suhrawardy still hopes that the full Round Table Conference will be held, and he would have it "rehearsed" in India in October. "A preliminary meeting of the Indian members selected for the Round Table Conference," he has said, "may be held in India, in October, in order to reach the greatest common measure of agreement amongst the various interests and classes regarding their representation, and effective safeguards for the minorities, in the proposed Constitution. Otherwise no useful purpose is likely to be served by the mere insistence on Government to make an unequivocal declaration regarding a Dominion status Constitution without reaching an agreement amongst ourselves as to the safeguards which would satisfy the various interests and classes concerned, and make the Dominion status Constitution acceptable to Muslims and other minorities. It appears that some prominent leaders are avoiding reaching any decision pending the publication af the Simon Report. Now that the date of its publication is not far off, Hindu and Muslim leaders can no longer avoid facing the important issue of arriving at a settlement and a satisfactory solution of the difficult problem of minorities, with which they are confronted, before they proceed to the Round Table Conference in London."

The Nizam's Manifesto.

A timely manifesto has been issued by the Nizam of Hyderabad. "At this juncture," part of its reads, "the endeavour of all, and more particularly of those in positions of responsibility and trust, should be directed to finding a solution of India's difficulties in a form of government for the future that will command the support of all reasonable men of every creed and every party as being the best calculated to ensure the enduring peace and prosperity of the country in general. To this end a Round Table Conference is being convened in London. As a faithfully ally of the British Government it is my intention to make towards its success the contribution that is due from my State and from my House. A few months ago I gave utterance on a public occasion to the above sentiments, and announced the policy I proposed to follow; but success at the Conference can only be achieved, if all parties co-operate in the presentation of their respective views in an atmosphere of friendliness and good will."

General.

What accounts for the marked contrast between the reasonableness and good sense of the views of such Princes and public men as the Nizam of Hyderabad and Dr. Suhrawardy and the jargon of such as the Congressmen; between the sound sense of the Nizam and the *jejune* twitterings of the Council of the National Liberal Federation, is that their position, either as independent Rulers or as members of a minority that, because it is a minortiy, much concern itself with realities, withdraws them from the play-acting that is forced on the Pandits and all their colleagues by the element that makes unreal for them any public life ordered as our public life is. A democracy is for them too alien a thing. To the Muslim, for all that he would never dream of establishing a government himself at the head of which there was not a Khalif, Khedive, Nizam, or Nawab, democracy in the mosque and before the Law is so familiar a thing, that he is prepared for a democracy, sufficiently safeguarded, in British India. He will much more readily associate hmiself, too, with foreigners in working it.

THE CULTURAL SIGNIFICANCE OF THE INDIAN STATES.*

By Professor L. F. Rushbrook Williams.

Prefacing his Paper with a reference to the Report of the Indian Statutory Commission, Professor Rushbrook Williams said:

The Commission's Report is in my view the first official document which assigns to the Indian States their true importance in the picture of India as a whole, and many will not fail to realize the full significance of the Commission's frank acknowledgment that the Indian States have established their claim to an equal place in any discussion of the future of India.

The fact that the Statutory Commission have already indicated that their whole conception of the Indian problem turns upon an evaluation of the significance of the Indian States in any future federal scheme deserves, I venture to think, our close attention. Many of us tend to think of Britain as ruling India; and forget that over a little less than half of the entire sub-continent Britain does not rule in any ordinary sense of the word. Then again, we tend to think of the Indian States, when we remember them at all, as effete survivals, sufficiently picturesque it may be, which endure only through our support and survive by reason of our half-contemptuous toleration. It has indeed for some time been fashionable to contrast the condition of British India under our own enlightened rule with the condition of Indian India, sunk, as it appears to us, in oriental lethargy. Moreover, we accept for ourselves the ideals of democracy. We have taught the educated classes of British India to worship at the same shrine. Such worship is, indeed, only natural; for does not the introduction of Western parliamentary institutions under our ægis afford the literate classes of society in British India a degree of direct political power, with everything that the East associates with such possession, manifestly out of proportion to that which they enjoyed under the traditional organisation of the Indian polity? We have come for ourselves to look upon all personal government, all systems of monarchy which are not constitutionalised to a point of virtual impotence, as "castles built in the sand"; doomed inevitably to crumble in ruin before the advancing tide of modern progress. In short, when we contrast the Indian States with British India, we too often consider that British India is inevitably the real India, both of to-day and of to-morrow: while the Indian States are but the India of yesterday.

I will to some extent anticipate the conclusions of this address by saying that, in my view, and, which is far more important, in the view of the Statutory Commission such an impression of the States rests upon false premises. To each and every one of the ideas all too comfortably held, of which I have just given some typical examples, the impartial observer may discover a retort which is as strictly in accordance with hard facts as it is damaging to our own self-esteem. Without going so far to suggest that events of the last 10 years, dispassionately observed, would seem to imply that, as measured by the contentment of the people, Indian rule in India is not necessarily in all respects inferior to British rule, I should like to propound the thesis that the States of India are something more than mere historical survivals of an unburied past. I believe there are cogent reasons for regarding them as the present day embodiment of political forces which have played a leading part throughout the long drama of Indian history; I believe that they deserve our attention as living examples of the manner in which Indians have governed themselves in the past and may quite conceivably govern themselves again in the future. In my judgment, British India differs only from the Indian States to-day in so far as this portion of the country is ruled by Britain, a distant Western Power, animated by political ideals which have so far struck only tentative and shallow roots into the soil of India. And how long, I would ask, can anyone of us guarantee that this condition will endure? To put the matter in another way, that portion of India which Britain to-day rules seems to me in essence but the greatest of the existing Indian States. It has shared with them a common process of growth; but it is, in comparison with them, artificial and unstable, since its operative principles are not indigenous but foreign.

The British Raj in India grew in the same way as any other Indian State. Its origin was doubtless unusual; the essential basis of its vitality without precedent, yet the process of its growth was strictly true to type. Long before the merchant adventurers of the old East India Company sighted the shores of India, other bands of foreigners in previous ages had found a lodgment in that hospitable land; long before our traders had secured their first tentative privileges and the ownership of the land on which their humble factories were built, their predecessors in the direct line of Indian adventure had acquired rights of settlement from similar petty overlords; and just as the factors of the East India Company extended their privileges, consolidated their power, allied with their equals and submitted to the superiors, so had the founders of preceding Indian empires pursued the same path. Their gradual advancement, partly by arms, and more directly by diplomacy, through the stages of inferiority to equality, and from equality to supremacy, was but the latest manifestation of a process many times repeated in the history of India. The British indeed differed from their imperial predecessors and from their contemporary rivals in three significant particulars. In the first place their mastery of the sea saved them from attempting the task, which to their predecessors always proved ultimately insuperable, of maintaining a long and vulnerable line of land communications to ensure that steady flow of recruitment from the homeland rendered necessary by the ravages of climate and the wastage of conquests. Secondly, the British in India, though commercial in their aims and origins, could always rely in an emergency upon the support of the efficient highly organised Government of the greatest world power of their day. Thirdly—and this is, perhaps, the most significant characteristic of all for our immediate purpose—the British transported from their own land a system of centralised authority, intimately bound up with a particular set of political ideas, which was entirely unfamiliar to the people who were brought under their sway. Nevertheless, in their ascent to paramountcy, the British were but following a path many times trodden, a path that was practicable, because of those separatist tendencies of political organisation which may be discerned throughout the whole history of India, tendencies which even to-day find expression in the shape of the existence of the Indian States.

Having thus envisaged the subject of our examination in a perspective better proportioned than that which we commonly apply, let us now endeavour to evaluate the cultural significance of the Indian States by regarding them as specimens of the State in India. It is necessary to remember that considerable allowance must be made for the effect produced by the rapid consolidation of Britain's paramountcy during the first two decades of the 19th century. The highly complicated map of Indian India as we know it to-day is the result of an artificial arrest by the imposition of the "Pax Britannica" of a process far from completed. The process of readjustment through warfare and diplomacy of the boundaries of the semi-autonomous kingdoms of India is one which seems to have taken place on each one of those numerous occasions when an Indian Empire crumbled into decay. The consolidation of the British power caught one such process half way, as it were, before any kind of political balance had been struck. In effect, we proceeded to

* Summary of a Paper read before the British Academy on June 11.

Digitized by Google

petrify existing arrangements at the stage which they had reached when we found ourselves able to control the situation. The consequences were curious. For our own purposes we kept in existence as independent entities small States which would, but for our insistence, have become baronies incorporated with great neighbours. In many instances we created princes out of feudal lordlings. In some cases we reduced princes to the position of landed proprietors: and even after this process was nominally completed, we continued for 30 years to absorb State territory into British territory, until at long last we produced the proportions which to-day exist between British India and Indian India. The result is two-fold. We have artificially increased the State units to a number unprecedented in the previous history of the country, and we have burdened Indian India with numerous petty principalities too poor and too inconsiderable to support the weight of an efficient administration.

But when every allowance has been made for the unnatural condition of the map, the fact still remains that it is to Indian India that we must look, not only if we desire to see Indian ideas of government in operation, but also if we desire to grasp the true significance of India's long history. For if the study of this history serves to reveal any one thing clearly it is this: that the political genius of the Indian peoples accommodates itself most kindly to those problems which are characteristic of a restricted area. And while the circumstances of British rule have profoundly influenced the map of Indian India, the Indian States, even as they exist to-day, are, so far as the governance of India is concerned, an institution far more venerable than our own Raj.

I leave aside the consideration, though in passing I desire to draw attention to its significance, that the people of each one of many of the existing States can trace their separate traditions of common governance back to a very remote period. The point I desire here to emphasise is that the more closely we examine India's political development in the past, the more clearly it is borne upon our minds that the traditional unit of Indian governmental organisation was a small semi-autonomous kingdom. India has never known centralised and direct rule over great stretches of her territory in the manner in which such rule has been constantly practised in the Western world. India has sought unity through the medium of diversity rather than through the medium of centralisation. The traditional empire of India has represented the domination of a lesser or greater proportion of the land of India by a power content to exercise indirect rule over the major portion of the territory under its sway, and to rule directly only those domains which constitute the principal bases of its military power. Alone among imperial régimes known to India have we British endeavoured to centralise the direct functions of government throughout the greater portion of the entire subcontinent.

The persistence throughout Indian history of the principle of decentralisation, seems to me something essential rather than superficial.

Beneath the shifting surface of Indian political history, constantly stirred as it has been by the blasts of invasion and of internecine warfare, there may be discerned a remarkable continuity of civilisation, connected with the three characteristic institutions of the family, the village and the caste. The operation of these three institutions resulted throughout the ages in India in a remarkable restriction of the sphere of State activity so far as the individual citizen was concerned. Many of the activities which we in the West regarded as being inherent in the State have in India for many centuries been discharged by semi-voluntary co-operative effort, working through the family, the village and the caste. From time immemorial in theory, and in many parts of India still to-day in fact, the State touches the life of the ordinary man at only one or two points in the whole range of his social activity; and the integration of the life of the individual into social activities lies very largely beyond the sphere of State influence. The importance of the family in shaping the life of the individual is a commonplace to European investigators of Indian sociology; but it is not always realised that it is the family rather than the individual which is the unit of which the State in India has always taken notice. Even now, in many Indian States, the family and the kin recognise a considerable degree of responsibility for the good conduct of the individual citizen; and the enforcement of this responsibility is regarded as among the very foundations of the general order of the community. Beyond the family and the kin the next integration in the social scale is the village. Traditionally the Indian village has always constituted the real governmental unit in India. In many parts of India, particularly in those areas where British centralisation has not broken down the ancient political structure, the village is still charged with ordinary police duties; the village council still remains the tribunal for petty cases both civil and criminal; and the village possesses and exercises the right to tax itself, quite independent of State permission, for common village purposes. Thirdly, caste, in which generic term I include for convenience the occupational guilds, provides a higher integration of social life along particular lines than that which the village, with its restricted area, can compass. The caste guilds and caste councils still play the most important part in the life of the ordinary citizen throughout India as a whole; but while in British India their direct political influence has tended to operate through less overt methods, they are openly recognised in the Indian States as among the most important directing forces in the sphere of politics.

It seems to me that we have in this somewhat unfamiliar social organisation a further factor which has operated to encourage decentralisation. It is a commonplace among careful observers of Indian conditions that no bureaucratic system, however enlightened and efficient, no system of representative Western institutions, no matter how liberal, really suffices to satisfy the need which the ordinary man experiences of the right of direct access in all his personal difficulties to the given individual in whose power lies the effective redress of wrongs. This insistence of the ancient right of personal access to the ruler which is even to-day so marked a characteristic of the constitution of the Indian States as we know them, must undoubtedly in the past have operated to encourage the persistence of the small kingdom.

After examining Indian ideas regarding the nature and functions of kingship, ideas which were suitable to kingship exercised throughout a small territorial area and unsuitable to conditions likely to obtain throughout a great Empire, Professor Rushbrook Williams pointed out that the absolute rule of the autocrat is opposed to all the fundamental ideas both of Hinduism and of Islam. Even to-day in many Indian States where Western institutions have not been introduced, it is still recognised that the supreme source of authority is not the ruler but the Durbar, constituted by the ruler sitting, not merely with his intimate councillors, but also with the heads of the various castes and guilds, with the great baronial lords, and even, it may seem in some cases, with the village headmen.

I am myself sufficiently unorthodox to believe that it is in the history of the small homogeneous kingdoms rather than in the history of the great heterogeneous empires that the true cultural development of India must be sought. Is it a mere fantasy to believe that in our writing of Indian history as well as in our administration of British India, we have been largely influenced by our Western conception of the benefits of centralisation? Whether this be so or not, the fact remains that throughout the story of India's cultural development, it is almost invariably the Indian kingdom and the patronage of a particular dynasty which has been associated with literary and artistic achievement. Surely it is no accident that even to-day, despite the artificiality of the existing political map, so much of India's architectural treasure, so much of that which is best in her contribution to the artistic heritage of the world at large, is to be found in territory that has been for centuries the seat of a local kingdom rather than of imperial government? Successive empires, from their seat in the Gangetic plain have not failed to enrich the country with monuments of great artistic merit; but it is to the past achievement, in the realms of architecture and sculpture, of the various individual kingdoms, that we must look, if we would gain any clear idea of the cultural heritage of India as a whole. In our concentration upon the achievements of successive Emperors, extolled as they were by the adulation of imperial historians, we should do wrong to omit the great figures which the local kingdoms can supply. Even to-day it is with such epic heroes as Jaichand and Prithiraj, and with such heroines as Durgavati and Chand Bibi that popular tradition and popular ballad love to deal. Folk-lore, legend and story still to-day linger round the local hero, the local fortress and the local tutelary deity

Indeed, it seems to me, that, unless we assign in the present, as well as in the past, the due importance to the individual kingdom, we are in some danger of missing that which is most real and most permanent in India. The great festivals which are celebrated every year on the ancient occasions in every Indian State are something more than opportunities for pomp and pageantry. However archaic or even obsolete they may appear to the sophisticated eyes of the Western observer, they stand for the ancient identification of the government with the governed: for that intimate personal touch between ruler and ruled which the West has been content to lose.

To me the cultural significance of the Indian States resides in the fact that they embody principles which are the very warp and woof of Indian social organisation. They stand, it seems to me, for decentralisation: if you will, for self-determination: for local loyalties and local attachments; for the separatism characteristic of truly national groups. This is not the occasion to draw from India's past a deduction which might guide us as to her probable future, but it seems difficult to deny, in view of the evidence available, that the best hope of attaining the higher political co-ordination which this modern age finds so necessary, lies in a frank recognition of the local diversity which is so deeply implanted in the cultural heritage of its various races.

OBITUARY.

SIR THOMAS ARNOLD.

We deeply regret to have to record the death, which occurred suddenly on June 16, at his home in Gloucester Walk, Kensington, of Sir Thomas Walker Arnold, C.I.E., Professor of Arabic in the University of London. He was, as our readers well know, one of the most eminent Islamic scholars of his time; he had a mind stored with erudition, a sympathetic insight into the Muslim East, and a mystic *flair* which enabled him to commune with, and explain, personalities remote in time from the present generation. His death, an infinitely sad thing to those who knew him and were stimulated and inspired by him in England, is nothing less than a world loss. By the School of Oriental Studies in London, which he joined as Professor of Arabic in 1921 and in which, despite the fact that he had recently reached the age limit of 65 years, he was doing invaluable work, his passing will be felt with particular severity.

Sir Thomas served for ten years at the Muslim University at Aligarh. Afterwards he accepted the Chair of Philosophy at the Government College, Lahore, and the post of Dean of the Oriental Faculty of the Punjab University. On his appointment, in 1904, as Assistant Librarian at the India Office he came home, to set up that close acquaintance with Muslim students in this country which lasted till his death. From 1909 until 1920 he was Educational Adviser for Indian students. He was knighted in 1921.

Of his publications, perhaps the best known, as they are the freshest, are "The Little Flowers of St. Francis of Assisi," and "The Preaching of Islam." These two works showed at once the range of his sympathies and the extent of his knowledge. Other invaluable books are his "Caliphate" (1924), "Survival of Sasanian and Manichæan Art in Persian Painting," and "The Islamic Book," a contribution to art and history in which he collaborated with Professor Adolph Grohmann. His researches into Muslim art and mysticism are, however, contained in many publications, and it will not be forgotten that he was the English Editor of the "Encyclopædia of Islam."

SIR FREDERICK ECKSTEIN.

We regret to record the death, which took place on Tuesday, June 10, of Sir Frederick Eckstein, Bart., at the age of 73. One of the leading figures in finance of his generation, his name will be specially associated with two parts of the Empire—South Africa and the Sudan. In the former country, to which he went in 1887 at the age of thirty, he was destined to play a prominent part in the development of the gold-mining industry, and become a Director of several important companies and Chairman of Rand Mines. On his return to England in the beginning of this century he became a partner in Wernher, Beit and Co., and in 1910 he succeeded Sir Julius Wernher as Chairman of the Central Mining and Investment Corporation in which the two concerns with which he was associated were merged. This position he held until 1915, when he resigned it in order to concentrate his activities on the development of cotton growing in the Sudan. It is this part of his career, notable as it was throughout, which stands out with special significance, for it was owing to his foresight and prescience that the Sudan has been able to acquire a great industry, which, as the trade returns testify, has had a great effect on the country's prosperity and promises to be an asset of enormous importance in the future. His untiring work for the Sudan received official recognition in the baronetcy conferred on him last year. He remained Chairman of the Sudan Plantations Syndicate until 1928, when he relinquished the office on grounds of health, but continued to be closely associated with the company as Deputy Chairman. Sir Frederick Eckstein also helped to form the Kassala Cotton Company which is now also established in the Gezira. He leaves a son and a daughter —the son, Bernard, who succeeds to the baronetcy, being a director of the Sudan Plantations Syndicate.

We regret to have to record the death of Mr. Leo Weinthal, founder and Editor-in-chief of the *African World*.

NEWS IN BRIEF.

During April 521 Jewish and 71 other immigrants entered Palestine; 111 Jews and 107 others emigrated.

The Anglo-Persian Oil Company has sent to the Persian Minister for Foreign Affairs a sum of 50,000 krans for the sufferers from the earthquake in the region of Salmas.

The Constitutional Liberals in Egypt, who stood aloof from the parliamentary elections earlier in the year, are rigorously contesting some of the elections for the Egyptian Senate.

The Persian Government is reported to be considering the question of engaging two Dutch experts who have had a thorough experience in Java of all matters relating to the cultivation of tea.

Admiral Sir Erne Chatfield, who succeeds Admiral Sir Frederick Field in the command of the Mediterranean Fleet, arrived at Malta on June 5 in the Queen Elizabeth.

Sergeant William Singleton, of Lisburn, County Antrim, belonging to the British section of the Palestine Police, is reported to have been murdered on May 26 at the Haifa end of Acre Bay.

At midnight on May 31 the payment of toll on Galata Bridge, Istanbul (Constantinople), which has been enforced since 1843, was discontinued.

Major M. D. Lecky, D.S.O., Royal Artillery, has been promoted to the rank of Lieutenant-Colonel with effect from June 12, and has been appointed Commander, Royal Artillery, Aden.

Mehmed Sabry Bey, the Turk who was accused of having attempted to murder Ismail Hakki Bey for political motives in November, 1928, has been found guilty at Nice of attempted murder with mitigating circumstances, and sentenced to seven years' imprisonment.

The death has occurred in Sydney, Australia, of Mr. G. W. Lambert, A.R.A., probably the best of contemporary Australian painters. He was the official artist to the Australian forces in Egypt and Palestine.

Prince Akbar Mirza Massoud (Sarem-ed-Dowleh), ex-Governor-General of the Province of Fars, who was placed last year under arrest as a consequence of the troubles in the province, has been set at liberty.

The Grand Shaikh of the Rualla, Nuri ash Shalaan, and the Shaikhs Berges ibn Hadaib and Rakkan ibn Marshad of the Shaa recently signed a treaty of peace which is expected to assure the tranquillity of the Syrian desert.

According to a telegram from Cyprus, the Greek Archbishop visited the Acting Governor and expressed to him congratulations on the King's Birthday. At the same time, the message adds, the Archbishop handed to the Acting Governor 496 resolutions from towns and villages signed by the local authorities, expressing the signatories' will for union with Greece.

The French School of Archæology at Athens announces the discovery during its excavations in Thasos of a statue of the Winged Victory. This lacks its head and right hand, and holds a laurel branch in its left. The Department of Archæology has decided to repair the ancient theatre at Epidaurus and is considering the repair of that at Delphi in order to facilitate the production of classical plays in both places.

Mr. Stanley Casson, of New College, Oxford, returned to Athens recently after excavating a site on Mount Pangaion, on the border of Thrace and Macedonia. In a cave at an altitude of 4,500 feet Mr. Casson discovered prehistoric and Roman remains, besides bones of animals. He fixed the site of a small Greek city of the fifth or fourth century B.C., with well-preserved walls, near Kavalla, and inspected the fine Byzantine castle near the modern refugee village of Neon Perama ("New Ferry").

Squadron Leader V. S. E. Lindop, who for three years has commanded No. 208 (Army Co-operation) Squadron in Egypt, has been appointed to Headquarters of the R.A.F., Trans-Jordan and Palestine, which are temporarily moved to the Custom House, Jerusalem. Squadron Leader Lindop, who was born in India and entered The Leinster Regiment from Woolwich, transferred to the Royal Flying Corps in June, 1914, and accompanied No. 3 Squadron to France on the outbreak of war. He holds the India General Service Medal for services during the Waziristan campaign, 1919-21.

PERSONAL AND GENERAL

TO-DAY

June 19, 1930 (New Style).

June 6, 1930 (Old Style).

Muharram 22, 1349 A.H., of the Muslim Calendar.

Sivan 23, 5690, of the Jewish Calendar.

Khordad 29, 1309, of the Persian Calandar.

Ex-King George of Greece visited the King and Queen at Buckingham Palace on June 12.

Lady Hirtzel left 30, Ennismore Gardens last week for Gloucestershire.

A son was born to Mr. and Mrs. E. H. Keeling at 15, Cowley Street, Westminster, on June 15.

The Rt. Hon. V. S. Srinivasa Sastri had an audience of the King at Buckingham Palace on June 14.

Captain the Hon. Spencer Boyle has left London for Cyprus.

Sir Bertram Hornsby left Egypt on leave on June 8 for England.

Prince Danilo of Montenegro arrived at the Carlton Hotel at the end of last week from Paris.

Sir John Maffey, Governor-General of the Sudan, who arrived at Anmer Hall, near King's Lynn, last week, was received by the King at Sandringham on June 11.

Sir Nigel Davidson, Legal Secretary to the Sudan Government, is shortly retiring from the Sudan Government service and will be leaving for England soon.

Dr. J. P. Wildeblood is holding at the Arlington Gallery, 22, Old Bond Street, W.1., an exhibition, which closes on June 27, of his representations of Mesopotamia and Kashmir.

An exhibition of paintings from India and Kashmir, by Mr. R. C. Weatherby, was opened on June 11 at the Alpine Galleries, Mill Street, off Conduit Street, W.1. The pictures will remain on view until June 21.

The Prince of Wales received the Chief of Bhor State, Major V. E. W. Simpson (Officer-in-Charge), and the King's Indian Orderly Officers at St. James's Palace on June 13.

Mr. and Mrs. Rudyard Kipling, who have been spending a holiday in Canada, arrived in the Clyde on June 14 on board the Duchess of Bedford and reached Liverpool the following day.

The King has approved the appointment of Mr. Harry Charles Luke, Chief Secretary, Palestine, to be Lieutenant-Governor of Malta, in succession to Sir Thomas Vans Best, who has been appointed Governor of the Windward Islands.

The Right Hon. Noel Edward Noel-Buxton, late Minister of Agriculture and Fisheries, who by deed poll notified in the *London Gazette* of June 11 changed his surname from Buxton to Noel-Buxton, will take the title of Baron Noel-Buxton, of Aylsham, in the county of Norfolk.

Professor L. F. Rushbrook Williams, who returned to London last week from his tour of lecturing on India in the United States, will read a paper to the East India Association at the Caxton Hall to-day (June 19), at 4.30 p.m., on "Indian Unrest and American Opinion." Viscount Burnham will preside.

The Royal Empire Society will hold a reception at the Imperial Institute on June 26, from 8.30 p.m. to 12.30 a.m.

The King has given authority to Mr. Frank William Cramer-Roberts to wear the Insignia of the Third Class of the Order of the Nile, which decoration has been conferred upon him by the King of Egypt in recognition of valuable services.

Brigadier R. G. H. Howard-Vyse, C.M.G., D.S.O., and Mrs. Howard-Vyse left Cairo on June 5 for Alexandria *en route* for England, where Brigadier Howard-Vyse will shortly take up his new appointment as Commandant, Equitation School and Inspector of Cavalry.

M. Smodlaka, of the Yugoslav Legation, opened on June 11 an exhibition of paintings of Yugoslavia which Miss Lily Waring is holding at the Beaux Arts Gallery, Bruton Street, Bond Street, W.1. The Yugoslav Minister, who was to have opened the Exhibition, had suddenly to return to Belgrade on June 10.

Mrs. Said-Ruete gave an At Home at 36, Cheniston Gardens on June 12. A moving picture of Miss Said-Ruete, Dr. and Miss Brock's journey through South Africa, Rhodesia, and Zanzibar was shown. Among those who accepted invitations were: The Afghan Minister, the Egyptian Chargé d'Affaires, the Persian Chargé d'Affaires and Mme. Nabavi, the Turkish Chargé d'Affaires, the Iraq Chargé d'Affaires, M. and Mme. Nohasen Khan Atabeki, Lord and Lady Headley, Mr. and Mrs. Robert Mond, Professor and Mrs. Elliott-Smith, Dr. and Miss Brock, Sir Percy and Lady Sykes, Sir Denison and Lady Ross, Sir Percy and Lady Cox, and Sir Robert and Lady Fox-Symons.

H.E. Monsieur Caclamanos received the members of the Byron Society and the Anglo-Hellenic League at the Greek Legation on June 13, when Sir Rennell Rodd, President of the Byron Society, supported by the Earl Beauchamp, presented to the Minister three portriats—of Lord Byron, Edward Trelawny, and Captain Hastings respectively—to be sent out to Missolonghi to replace those destroyed in the fire there last year. Two of the portraits are by Miss Ursula Wood, and that of Captain Hastings by M. Pericles Vyzantios. Among those present were Lady Helen Murray, the Hon. Katharine Thring, the Hon. Mrs. Tatton Bower, Sir Arthur Crosfield, Sir John and Lady Stavridi, Lady Meiklejohn, the Greek Archimandrite, Canon Douglas, Mr. John Mavrogordato, Miss Ada Byron, the Misses Stavridi, Miss N. Byron, Mr. John Drinkwater, and Miss Anne Lytton Milbanke.

THE WEEK AT HOME

London, Tuesday Morning.

The Government's Duration.

In country-houses, clubs, and other pleasant but ill-informed places, there is talk of the Government's falling before the year is out. It is felt, apparently, that no Administration could long hold office with the figures of unemployment increasing so terribly. The redoubtable Mr. Maxton, who possibly, however, is a finer orator than prophet, has just given the Government another six months of life—unless a stroke of the highest political genius be indulged in, and everybody knows that Mr. MacDonald will attempt no flights of that sort. What the Opposition (in whom one scarcely knows whether to include the Liberals or not, though I certainly think not) are manifestly hoping for (from the purely party point of veiw) is another winter of increased discontent, by which time, they hope, the country will have become thoroughly disillusioned with the Socialist Government. It is just possible, however, that before that problematical contingency arrives, the whole problem of unemployment will be approached on a non-party basis, even though the old fear concerning "power without responsibility" dies hard.

Conservatives' Agricultural Policy.

After months of anxious waiting, the agricultural policy of the Conservative Party was unfolded last week by Mr. Baldwin. It has been received coldly on the whole. The Empire Free Traders, of course, promptly denounced it because it fails to give direct protection to the farmer.

What Mr. Baldwin, after long weeks of thought, has now made up his mind to do is: (1) to guarantee a price (unstated) for wheat, the sum for such guarantee (which presumably would be about twenty shilling per quarter) to be derived from the proceeds of new Safeguarding duties; (2) to stop by prohibition or by countervailing duty the importation of dumped and bounty-fed oats; and (3) to impose a duty on imported barley. This, admittedly, is not very much; there was, moreover, a note of hesitancy in the announcement upon which Mr. Baldwin's political opponents have not been slow to fix. The impression appears to be growing that the Leader of the Conservatives is indulging in a kind of tentative immovability, that he will not be budged, that he has lost the imaginative touch essential to popular success. Be that as it may, it cannot be said that this enunciation of agricultural policy, which apparently is a vote-catching policy, has awakened much enthusiasm. The National Farmers' Union, in particular, received it with polite discrimination.

The Crusaders Cross.

It is an extraordinary but not inexplicable spectacle to see the Empire Crusaders vigorously attacking the one party from which they can hope ever to get much, one means, the Conservative Party. Every day, almost, a fresh lance is broken over Mr. Baldwin's unperturbed head, and almost any issue, from the Referendum to food taxes, will serve. The *Morning Post* has even likened Lord Beaverbrook's campaign to the Fourth Crusade, in which the Franks fell, not upon the Saracens (the Free Traders) but upon the Eastern Christians.

The truth is that Lord Beaverbrook is now thoroughly restless, and aims at nothing less, apparently, than the Premiership for himself. The gulf between him and the official leader of the Opposition is surely too large now ever to be bridged again—at least it would be, given normal consistency on either side. It is a pretty position—so-called Conservatives attacking miscalled Conservatives. But to the outsider Mr. Baldwin's supporters seem to have the better position, for they, at any rate, have kept equable, whereas the Crusaders give the impression of being really cross about what they consider to be the stupidity or the cowardice of the official Conservatives, but what may quite possibly be the result of a combination of knowledge (unpossessed by the Crusaders) and prudence (deplored by the Crusaders).

The University Man in Business.

It is continually cropping up, this question of the University man in business. Is he, or is he not, a success? One hears very general accounts of his failure, some employers even going so far as to say that, because since the War undergraduates have been drawn largely from schools very different from those which provided them before the War, the whole type of University man has changed—for the worse. The most common complaint, perhaps, is that the young 'Varsity man nowadays lacks enterprise, and plays for a mediocre safety.

To judge, however, by the annual conference of the Association for Education in Industry and Commerce, which took place last week in Liverpool, there is still among many employers in this country a growing desire to employ the services of University men in business, and to bridge the gap between commercial and academic life. The graduate's chief drawback, according to speakers at this conference, is his original attitude, which must, if he is to succeed, be one of humility and willingness to learn.

My own view is that the 'Varsity man can easily be a success in business in spite of his training. It is quite certain that his habit of judicial, unhurried thinking will find little expression in the life of rapid decisions imposed by business. He must, if he is to retain the cultural pleasures begun at the 'Varsity, live virtually two lives: the business life and the leisured life. Such a dualism is not easy to achieve, but whosoever achieves it will be a very successful man, because there must be unconscious and beneficial adjustments of the one life to the other.

London's Lido.

Mr. Lansbury, as a keen young Labour Member of Parliament once told me, has been the only Cabinet Minister really to stand up to, and to make his views prevail upon, the permanent officials. At last his dream of providing London with a Lido has been realised. For yesterday there was mixed bathing in the Serpentine, officially countenanced!

But it may be that the magnitude of this achievement has been exaggerated, for it is now being said, *pace* our Puritans, that the Serpentine bathing programme was unopposed by the Office of Works. The bathing pavilion, which cost £4,250, has accommodation, I notice, for 140 men and only 40 women. Where are our suffragettes now, to rid us of such shameful discrimination?

THE EARTHQUAKE IN AZERBAIJAN.

(From a Tabriz Correspondent.)

On the night of May 6, between 1.30 and 2 a.m., a strong earthquake shook the whole of the province of Azerbaijan, rasing to the ground the entire county of Salmas with its sixty or more flourishing villages.

A shock had taken place during the day violent enough to cause a cracking of the mud walls, and the wise had taken refuge out in the open fields for the night, but the bold and the indifferent had retired, as usual, to their comfortable beds, when the earthquake overtook them again at midnight when they were in sound sleep.

The underground current started, it is said, from Mount Ararat, and, coming south in two directions, east and west, destroyed the city and province of Van and Bashkaléh in Turkish Armenia, and then, in our own province, Maku in the north, both Russian and Persian Julfa, Khoy (partly), Salmas, Urmi (partly), the county of Sooloodooz and Suj-Bulak.

A side current separated from the main current somewhere near Maku in the north, and flowing down by the north and eastern shores of Lake Urmi has shaken Marand and Sofian on the Julfa road, Tabriz, Govgan, Maragha, Mianduab and Suj-Bulak.

As soon as the news of the calamity to Salmas was known in Tabriz, a band of Red Sun and the Lion (the Persian Red Cross) workers, doctors and nurses started at once to give first-aid to the wounded. His Majesty, Riza Shah Pahlavi, at once ordered 60 tons of ready-made bread and other foodstuffs to be taken to the stricken country in the quickest manner possible. Hence, all the motor cars, home or foreign, were commandeered and filled with food and nurses. Besides these, by order of the Shah, 500 karvars of wheat and 50,000 krans were set aside by the Finance Department for the relief of the sufferers in Salmas. The Shah has also ordered Sartib Zafar-ed-Dowléh (son of the elder brother of the late Shuja-ed-Dowléh of Maragha) Commander-in-Chief of the Imperial troops in this province, to keep him informed hour by hour of the conditions of Salmas, and other places.

In Salmas not a house is standing erect. A few thousand labourers are at work digging out the bodies of the dead. So far, it is said, nearly six thousand bodies have been found. The number of the sick and wounded is comparatively small, as, the calamity taking place at night, all those who were within the houses have been buried under the ruins. All the troops are safe, the first quake, which occurred in the daytime, was sufficient warning to the local commander of the garrison, who ordered his men to move out of the town and spend the night in the open air. Thus not a single man in uniform was lost.

There is, also, an eruption taking place upon a small hill between Salmas and Khoy, with a strong current of fire, sand and a very foul smelling gas.

We, too, in Tabriz, have felt the shock, or the shocks, daily. Hence, Tabriz, to put it mildly, is in a panic. Although no damage has been done to any building or any house, nor a single life lost by the quake, the people are in such a panic as if it were the end of the world. All the upper and middle classes, and, indeed, those of the lower classes, who can afford to do so, have shouldered a blanket or two and are running in every direction, so long as they can get themselves out of town in the shortest and quickest manner possible. The neighbouring *baghs* and gardens are filled with their owners, friends and neighbours, nay, even strangers, such are human brotherhood and sympathy at a time of calamity.

At first the machinery of the city was also upset. The employees in the post offices, in the finance and Customs and other Government departments used to get to their work rather late in the mornings and were generally irregular. But we are getting used to the shocks, and the old fear vanishes. Things are getting to be more regular.

Cinemas and other places of amusement were at first closed owing to the absence of patrons, every one being afraid to be inside of any building; but as things are assuming a more regular appearance, cinemas also are being opened and the cinema-loving classes crowded in as usual, daring even the earthquake!

Writing from Salmas, a friend of mine says: "You can imagine how we feel with the sight of so many dead, crushed skulls, broken legs and arms, unrecognisable faces covered with blood, dust and ashes, the foul smell from the dead and from the foul gas blowing out through the cracks and holes in the ground, and the daily and hourly quakes which we have here. The earth oscillates like a cradle under our feet and we fall down dizzily, as if we were drunk."

THE PALESTINE EXPLORATION FUND.

The sixty-fifth annual general meeting of the Palestine Exploration Fund was held on June 12 at the rooms of the Society of Antiquaries, Burlington House. Dr. H. R. Hall presided. In moving the adoption of the report he said that the Fund had conducted no excavations on its own account since Mr. Crowfoot completed the filling-in of his work on Ophel in January, 1929. The researches of the past six years had conclusively defined the various periods of occupation. Nothing of a sensational character had come to light. The cost of these excavations had been largely borne by Sir Charles Marston. Early in 1929 it was evident that the Committee would have to call a halt with the excavations. Sir Charles Marston, however, again expressed his willingness to help by contributing a part of the expenses of a short season, and this, it was hoped, would be carried out during the coming autumn. A proposal had been made that the Fund should join with the Board of Oriental Studies of Harvard University in excavating Sebastiyeh, the site of Samaria.

The formation of a joint advisory council of the Fund and the British School of Archæology in Jerusalem was ratified by the meeting.

Professor Garstang gave an account of his recent excavations at Jericho, which he illustrated by lantern slides. He said that the early wall went back to the earliest fortifications of the site, about the year 2000 B.C. The upper wall was of the time of Joshua, and the signs of destruction were clearly marked. It was incontestable that the city was fortified in the late Bronze Age, that it was destroyed, and that the destruction was followed by a general conflagration not later than 1300 B.C.

NEW ROUMANIAN CABINET.

The new Roumanian Cabinet, which was formed by Dr. Maniu on June 13, is composed of the following Ministers:—

Dr. Maniu	... ...	Prime Minister.
M. Vaida-Voevod	... ...	Interior.
M. Mironescu	... ...	Foreign Affairs.
M. Popovici	... ...	Finance.
M. Junian	... ...	Justice.
M. Madgearu	... ...	Trade.
M. Mihalache	... ...	Agriculture.
General Condeescu	... ...	War.
M. Kostakescu	... ...	Education.
M. Manoilescu	... ...	Railways and Communications.
M. Halipa	... ...	Labour.

Ghazi Mustapha Kemal Pasha, President of the Turkish Republic arrived in Istanbul from Ankara on June 11.

Mr. J. Spears, British Representative at Athens of Imperial Airways, died there last week as the result of a collision of his motor-bicycle with a motor-'bus between Athens and the bathing place at Glyphada.

M. A. Aghnides, a Greek, who has been a member of the Secretariat of the League of Nations in Geneva for ten years and who was previously director of the Press Bureau of the Greek Legation in London, has been appointed, subject to the approval of the Council, Director of the Disarmament Section of the League Secretariat, in succession to M. Golban, recently appointed Norwegian Minister to France.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Egypt's Cotton Policy.

The news that the Egyptian Government has decided to continue its policy of supporting the cotton market, and that for that purpose the Cabinet has approved a Bill for the transfer of a further £E8,000,000 from the Reserve Fund, will not unnaturally occasion some criticism, for it is felt that the Government has already gone further in its purchases than a policy of prudence would dictate. By the end of April the Government purchases amounted to more than £E7,000,000, and the total has been added to since then. Until recently the Government's policy of cotton purchases had widespread support in Egypt, but there has been a change of view, and the wisdom of continuing the policy is now being questioned. As I have already pointed out, Egypt can only suffer from the maintenance of an unreal level of prices, for the natural result must be for Lancashire to look elsewhere for cheaper supplies. Egypt's real interest lies in meeting the needs of Lancashire by attending to the question of the quality of the cotton and by producing it as cheaply as possible.

The Anglo-Persian.

At the annual meeting of the Anglo-Persian Oil Company, Sir John Cadman, gave a most interesting account of the company's position. Dealing with the fields, he pointed out that the net production from Masjid-i-Suleiman was approximately 5½ million tons or at about the same rate as last year, but that the actual crude output was in reality in excess of this figure. On the Haft Kel field a structure exceeding nine miles in length by about two miles in width, with a vertical head of oil exceeding 1,600 feet, has been proved. This field, it will be recalled, was connected with the Abadan pipe-line in November. On the Naft Khana field production has been drawn in quantities sufficient for local requirements. Sir John Cadman touched briefly on the position in Iraq, and remarked that the laying of the pipe-line to the coast, involving an outlay of many millions, could only be prudently undertaken when adequate reserves of oil are proved. It is very satisfactory that he should be able to state that the proof is well in sight. Referring to the outlook, Sir John Cadman pointed out that the demand for petroleum continues to expand, and he anticipates another successful year provided unforeseen factors do not intervene.

Another Neglected Trade Opening.

Reference has been made in these columns on several occasions recently to the poor showing made by British trade in regard to various commodities in the Egyptian market. In the current issue of the *Monthly Journal* of the British Chamber of Commerce of Egypt, attention is drawn to the small share that falls to this country of the trade in electric light bulbs and fittings. With building going on rapidly in every country it naturally follows that in Egypt, as well as in other Near Eastern centres, there must be a continually improving market for these commodities. Unfortunately, as far as Egypt is concerned, the figures suggest that our traders have not been paying the special attention to this outlet that is required. The figures given by our contemporary with regard to the trade in electric bulbs for the past three years are illuminating. In 1927 Egypt imported 1,323,321 bulbs of the value of £E43,677, the British share being 60,688 of the value of £E3,044, or approximately 7 per cent. In 1928 out of 1,606,009 bulbs of the value of £E46,457 the British share was 31,351 of the value of £E1,371 or about 3 per cent., while last year out of 1,563,741 bulbs of the value of £E46,773 the British share was 43,060 of the value of £E1,755 or just under 4 per cent. The position is somewhat better with regard to electric light fittings, the British share of the trade in 1929 of £77,983 being £E10,470. It should surely be possible for our traders to make a better showing in both these classes of the trade.

Imperial Bank of Persia.

The report of the Imperial Bank of Persia for the year ended March 20 last shows profits of £124,279, or very nearly the same as those of the previous year, which totalled £126,000, and with the carry forward the available total is £150,881. It is proposed to pay a final dividend of 7s. per share and a special bonus of 2s. per share, making, with the interim dividend of 4s. per share, 13s., free of income tax; to add £40,000 to the reserve fund, bringing it to £650,000, the amount of the issued capital; to write off bank premises £10,000; and to carry forward £44,881. Recent developments in Persia impart a special importance to the forthcoming general meeting of the bank, when it may be expected that Sir Hugh Barnes will refer to the adoption by Persia of a gold standard and the effect on the position of the bank of giving up the exclusive right to issue notes in consideration of the payment of £200,000 and the grant of certain privileges.

The "Shell" Report.

Without exception the great oil companies have shown excellent results for the past year, thus providing a welcome gleam of relief in the prevailing trade depression. The dividend statement of the "Shell" Transport and Trading Company has already been referred to in these columns, and the report, which is now forthcoming, shows that the net profits for the past year amounted to £6,483,387, an increase of £1,035,493 on the previous year. The company's revenue is, of course, derived from interest in numerous operating concerns and from investments. The distribution on the Ordinary shares is being maintained at 25 per cent., but it requires this time a considerably larger amount owing to the increase in the capital during the year. The reserve fund again receives a substantial allocation, bringing it up to £6,881,609, and the carry forward is £240,650, as compared with £237,604.

COMMENTATOR.

The India Stores Department have given a contract to the British Metal Corporation, London, for 370 tons of electrolytic copper ingot.

The contract for the re-equipment and re-organisation of the Constantza power station and electricity supply on the basis of the contractors taking over the exploitation of the supply service and working it through a private company has been given by the Constantza Municipality to the Belgian company L'Union Electrique Rurale.

The traffic receipts of the South Indian Railway Company for the week ended May 17 amounted to Rs.12,36,486, making the total from April 1 Rs.84,33,038, as compared with Rs.87,89,176 for the corresponding period of the previous twelve months.

It is reported that the Turkish Council of Ministers have approved in principle the agreement reached between the Minister of Finance and a representative of the American European Match Company by which this group will advance a sum of £2,000,000 to the Turkish Government in return for the concession of a match monopoly in Turkey over a period of twenty-six years.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 17.

The Stock Markets opened after the Whitsuntide holiday in lethargic mood, the dullness being accentuated by fresh liquidation in New York, which of course mainly affected international stocks. The weakness of the foreign exchanges and a firmer tendency in the discount market, coupled with preliminary sales to finance applications for the Reparations Loan, depressed the gilt-edged market. Home rails were affected by the disappointing traffic returns for the holiday week, but though prices were marked down there was little selling. Industrials, in spite of the fall in Wall Street, held their ground better than might have been expected, but the more speculative markets were still overshadowed by the fall in commodity prices. Royal Mail stocks, which have lately shown such a heavy fall, were inclined to recover a little on the appointment of a committee to overhaul the financial organisation of the group.

The view that quiet conditions are likely to persist in the Stock Markets for the next two or three months is confirmed by the events of the past week.

Reparations Bonds.

The prospectus of the London issue of the new Reparations Loan—or of the German Government International 5½ per Cent. Loan, 1930, to give the issue its official title—appeared on Thursday, the lists opening the following day. The strong support of the issue left no doubt of its success. The lists were closed at midday on Friday, and the markets anticipate that dealings will open at a small premium. The bonds are finally redeemable at par in 1965, but the German Government has the option of redeeming not less than one-tenth of the total issue of about £60 million (the London portion was £12 million) on any June 1 in any year after 1935. This provision will probably have restricted the demand from investors in search of a high-class long period security. Nevertheless, the bonds had their attractions, as at the issue price of 90 the flat return will be £6 2s. 3d. per cent., and the yield, allowing for redemption at the latest date, £6 4s. 1d. per cent. The issue, however, has wider importance than its appeal to the investor which may have been overshadowed by the long-drawn-out negotiations and discussions over details. It marks the end of the period during which Germany has been under the sharp surveillance of representatives of her creditors Now she takes her place as a free nation, whose honour, and not her freedom, as Mr. Owen D. Young has well said, are at stake in the event of a default. This is illustrated in the fact that it is for Germany to decide whether postponement of the payment of the conditional portion of the Reparations annuities is necessary or not.

BANQUE FRANCO-BELGE ET BALKANIQUE

Joint Stock Company

Capital - Leva 150,000,000 fully paid up.

Affiliated to the Banque Belge pour l'Etranger (a foundation of the Société Générale de Belgique), Banque de l'Union Parisienne, Wiener Bank Verein, Oesterreichische Credit Anstalt für Handel und Gewerbe, Ungarische Allgemeine Creditbank.

Head Office: SOFIA.

Branches at Doupnitza, Haskovo, Lom, Pleven, Roustchouk, Varna, Vidin.

Affiliated Banks: **BANQUE DE PLOVDIV AT PHILIPPOPOLIS.**
BANQUE BULGARO-BELGE AT BOURGAS.
BANQUE BULGARE DU NORD AT SVISTOV.

Banking business of every description transacted. Discounting of trade bills. Advances against securities. Endorsements and guarantees issued. Dealings in foreign exchange, securities, coupons etc. Special service of private safes

Cable Address: FRANCOBELG.

R.M.S.P.

The past week was eventful for the stockholders of the Royal Mail Steam Packet Company. It opened with the publication of the accounts for 1929, which, if they showed the most serious fears to have been unjustified, made by no means pleasant reading. The balance for the year was shown at £570,542, but £414,855 had to be deducted for fleet depreciation, and the balance for 1928 was £687,714 after provision for depreciation. Debenture interest and sundry minor allocations more than swallowed up the available balance, and the net result was a deficit of £78,706, so that the preference and ordinary dividends were passed. Comment was naturally aroused by the absence of reference to the company's heavy engagements falling due in the near future in the shape of maturing Trade Facilities loans and debentures, purchase money on the White Star Line, and on the latter's purchase of the Australian Commonwealth Line, as well as payments for new construction. It was revealed later in the week that in consideration of the appointment of a committee consisting of Mr. Frederick Hyde (of the Midland Bank), Brigadier-General A. Maxwell (of Glyn Mills), and Sir William McLintock the well-known accountant), to confer with the Boards of R.M.S.P. and its subsidiaries on matters of finance, management, administration, the principal creditors had agreed to defer their claims. They also insisted on the appointment of Mr. Walter Runciman to the Boards of these companies to make recommendations "as regards changes of management and administration."

J. Lyons and Co.

A large turnover is one of the main objects of the trading policy of J. Lyons and Co.; this is particularly so because to an ever-growing extent they are manufacturers of most of the products they sell, and mass production is one of the keys to success in manufacturing. The public who see the well-known tea shops packed with a great variety of foodstuffs hardly think of the large organisation and the number of factories which have produced the goods. It is because they are also manufacturers that J. Lyons and Co. are actively developing the sale of their goods outside their own shops. Thus are kept busy their large factories, bakeries, tea blending departments, besides the ancillary departments such as the laundry or printing works, their tea buyers in India and cocoa buyers in Africa. J. Lyons is a very self-sufficing organisation. The profits just declared testify to the efficiency of the firm and the wisdom of their policy. For a number of years, each year's profits have been higher than the last. Net profit for the twelve months ended March 31 last was £935,870, an increase of about £27,000 over the previous period. Reserves, as for the last three years, again receive £100,000 and now amount to £1,300,000. The carry forward at £33,226 is practically double the amount brought in. For the third year the "A" Ordinary shares received a 22½ per cent. dividend, and these shares now yield about £4 10s. per cent. The consistent development of the company suggests good prospects of capital appreciation.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

†*CASTALIA ...	July 11	†*ELYSIA	Sept. 12
*CIRCASSIA ..	Aug. 29	‡§BRITANNIA ..	Sept. 24

*First class passengers only. Specially low fares. †Calls Port Sudan. ‡ First Class and Third Cabin passengers. § Leaves Marseilles Oct. 1.

SPECIAL NOTICE. New T.S.S. CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Dairy Farm Plant.—The Director-General, State Domains Administration, No. 5, Midan Sheikh Yousef, Kasr el Doubara, Cairo, invites tenders for the supply and erection of mechanical plant for Darawa dairy farm situated at Delta Barrage opposite Barrage prison, Zimam Darawa, Menufiya. July 29.

Electric Generating Unit.—The Ministry of Public Works, Egypt, invites tenders for the supply, erection, delivery, and maintenance at Tor Quarantine on the Gulf of Suez, of an electric generating unit with accessories, motors, the erection of transmission lines and cordon lighting round a camp. June 30. (D.O.T.)

Vacuum Brake Fitting, etc.—The Egyptian State Railways, Telegraphs, and Telephones, invite tenders for vacuum brake fittings, armoured cables, unarmoured cables, French nails, connecting rods, leather, mild steel round bars, and signalling materials.

Cotton Duck, etc.—The Director of Stores, 20, Sharia El Falaki, Cairo, invites tenders for the supply of cotton duck, calcium arsenate, sulphuric acid, and sodium cyanide required by the Plant Protection Section. July 20.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Glasgow, June 30; Manchester, July 5; Birkenhead, July 11). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matra for Calcutta (Birkenhead, June 23); s.s. Mangalore for Calcutta (Glasgow, June 26; Birkenhead, July 3).

Bibby Line.—S.s. Shropshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 25); s.s. Oxfordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 9).

Cunard Line.—S.s. Bantria, closing in Glasgow July 19 for Casablanca, Gibraltar, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement. Closing in Liverpool July 19 and in Swansea July 22 for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducement; s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow, July 31; Liverpool and Swansea, August 2).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta London, June 14); s.s. Trekieve for Bombay (London, June 21).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 24); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17).

P. and O. Line.—S.s. Perim for Calcutta (London, July 4); s.s. Kaisar-i-Hind for Bombay (London, July 4).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, June 21); s.s. African Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, July 2); s.s. Corsican Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, July 5).

Ellerman and Papayanni Lines.—S.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Swansea, June 20; Liverpool, June 24); s.s. Manchurian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 5; Swansea*, July 5); s.s. Kelso for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 5); s.s. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, July 5; Swansea, July 10): A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 18); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 26; Swansea*, July 26). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Pierre Loti for Alexandria, Jaffa, and Beyrout (June 24); s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (July 1); s.s. Champollion for Alexandria, Jaffa, and Beyrout (July 1); s.s. Lotus for Alexandria, Jaffa, and Beyrout (July 8).

Motors and Motoring.

(By Our Motoring Correspondent)

Driving and Fatigue.

I see that someone has revived the old story about the risk of falling asleep whilst driving, and the subsequent danger to others brought about by this heterodox method of snatching a moment's repose. A leading medical authority recently told us that there is a serious liklihood of meeting a man who is driving in his sleep. The contention urged sems to be that when specially fatigued, or after a more than usually generous meal, moments of actual unconsciousness occur during driving, and that then, to all intents and purposes, the driver is sound asleep. I wonder if this medical man has ever seen a motion picture and realises that during each second he sees a very large number of pictures, and, which is relevant to my argument, does not see the picture for an exactly similar number of times. During those gaps his visual organs are absolutely inoperative, seeing nothing but a black void rendered the blacker by contrast with the light that has just vanished. To all intents and purposes, during the period when the automatic shutter cuts off the light as the film moves, the eye is asleep, but is it any the less able to wake instantly, in the fractional part of a second, to see the next illuminated picture? Every form of life, every organic and reflex movement, seems to be working on a wave system, a series of alternations, as it were. The beat of the heart raises the blood pressure; immediately before the next beat it has fallen almost to zero. At that period almost every bodily cell is dying, perishing for want of oxygen, falling into a state of coma or sleep. Yet it is keenly alive to the coming of the next wave of life, its functions are not impaired, its movements, its activities, none the less sure.

So it is with the motor driver. Moments of semi-, or even complete, unconsciousness may come upon him, in which perhaps, he may close his eyes, although I doubt it. But that no more impairs his road sense than it stops his heart beating! I doubt whether it is possible, by sheer fatigue alone, to cause the brain of a practised driver to lose control of the car for even the smallest fraction of a second. A man may drive in apparently a dazed state, and be absolutely oblivious to everything but his task of driving. An ignorant observer might consider him asleep or stupid, and yet his brain might be working quite normally. There is a paramount ego when driving; an "I" which keeps control, however much it may appears to have lost it.

I remember once driving, on a most tempestuous day for nineteen hours without a stop on some of the worst roads in England, during which I covered just over 380 miles. No great feat, but roads and weather were unspeakable, and the journey began in the dark hours of the early morning—to be exact, about 3 o'clock—and ended at 10 o'clock at night. When I say that the time was very early spring it will be realised how much of this drive was done in the dark. Further, starting at 3 a.m., had meant my actually starting about 12.30 to reach the official starting point. I remember that towards the end of the journey I was as nearly done as possible owing to the abnormal conditions. I daresay I fell asleep dozens of times, yet not for one-millionth of a second could my brain have lost control. As a matter of fact, my driving brain was the only part of me, at the end, that had any clear idea of what it was doing. I could have gone on driving for ever, could have driven across Niagara on a tightrope, so to speak, had it been part of the course, but every other part of me was finished. I couldn't have talked, couldn't have heard anyone else talking for quite a time after the journey's end. Had a policeman stopped me and asked me to get out and walk he would probably have noticed that I swayed about stupidly. A doctor would surely have said I was asleep. But the motoring part of my brain was almost abnormally alert.

The Practised Driver.

I am not disposed to view at all seriously the danger of either sleepy or drunken drivers. Except under the most intense fatigue or the influence of an exceptional amount of alcohol the brain of the practised driver continues alert. That is my considered opinion, arrived at after driving over, I am afraid to say how many miles. I say "practised driver," because until a man has acquired road-sense, the brain is liable to panic actions. But it does not take long for a man's brain to acquire road-sense, and when an eminent physician says: "It is the opinion of many competent observers that a proportion of the accidents which occur each week are due to sleep," I simply counter by saying that my opinion as a competent observer is that no accidents whatever happen from that cause. The man who has road sense has a brain that will continue to drive; the man who is a novice and who has not acquired road sense is about the last person in the world to fall asleep at the wheel.

Gear Changing.

A correspondent, writing regarding the gear changing on Morgan runabouts, says: "The best method is as follows: keep the right hand on the steering wheel and throttle lever controls and change gear with the left hand across the body. This method came to me naturally, so I cannot say how long it would take anyone to get used to it." I pass his remarks on for the benefit of those readers of THE NEAR EAST AND INDIA who drive these excellent little three-wheelers.

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C

The net profit of the Mortgage Company of Egypt for the year ended March 31 was £135,744, and £50,000 was brought forward. The dividend on the Five per Cent. Preferred shares requires £50,000, and the directors recommend that a dividend of 20 per cent., being 5s. per share, be paid on the amount called up on the Ordinary shares, requiring £50,000, that £5,000 be added to the contingency fund and £6,460 to the special reserve, and that £74,284 be carried forward. The cotton crop for 1929 is estimated to exceed 8,000,000 kantars, against 7,959,645 kantars in 1928 and 6,018,000 kantars in 1927.

RAILWAY CONDITIONS IN TURKEY.

In an interesting article in the United States "Commerce Reports," the United States Commercial Attaché at Istanbul, Mr. Julian E. Gillespie, deals with the history of railway construction in Turkey and the developments that are in progress or in contemplation. We give the following extracts :—

Since 1925 Turkey has initiated a very definite programme, aiming at the construction of some 2,500 kilometres of additional lines and the acquisition, control, and operation of the more important privately owned railways in the country. Approximately 180 kilometres of new lines are being constructed by the Turkish Government, 700 kilometres by a Swedish group, 380 kilometres by a German concern, and 22 kilometres by a native company. The present mileage, including all standard-gauge (1.435 metres), narrow-gauge (0.60, 0.75, and 1 metre), and in one instance broad-gauge (1.524 metres) lines in operation, aggregates about 5,215½ kilometres (3,241 miles), and 1,282 kilometres (797 miles) are under construction. Of the lines in operation, 2,554 kilometres are controlled by the Turkish Government, and 2,661½ kilometres by private interests.

Construction of a railway from Ankara to Erzroum via Sivas was undertaken in 1914, but in 1924 the National Assembly decided upon a route from Ankara to Kayseri and thence to Sivas, as this route would traverse more important producing sections of the country. The section from Ankara to Yerkeuy was opened to traffic in 1925 and laying of track was continued through 1926. On December 18, 1926, a contract was signed with a Belgian group giving it construction of the Kayseri-Sivas section. The section from Ankara to Kayseri, 381 kilometres (237 miles) in length, was completed and opened to traffic on May 29, 1927. Later in the same year the contract with the Belgian group was cancelled. The Government decided to complete the line to Sivas and continued the work during 1928 and 1929. The section from Kayseri to Sivas is expected to be completed about September, 1930, and the entire line from Ankara to Sivas opened to traffic by the close of the year. It will then be operated as a division of the State railways. Rolling stock in operation on the Ankara-Kayseri section in 1927 comprised 20 locomotives, 7 baggage cars, 24 passenger cars, and 394 freight cars.

The construction of the Samsun-Sivas Railway was undertaken in 1911 and was continued until the beginning of 1914. Studies were made in 1920 for the completion of the line, and in 1922 it was included in the Chester project, but not until early in 1924 was construction started. The section Samsun--Havra was completed in September, 1927. Later Amasya was reached, and at present traffic is being maintained as far as Zile, a distance of 220 kilometres (137 miles). An additional 70 kilometres were expected to be opened to traffic at the end of 1929. The construction of the Turhal-Sivas section of the railway was provided for in the contract signed with the Belgian group for the construction of the Kayseri-Sivas section of the Ankara-Sivas Railway. Following cancellation of that contract the Government undertook to construct the section. Its completion now appears probable within the period stipulated in the cancelled Belgian contract.

The Samsun Littoral Railway is a narrow-gauge line, of which the completed portions extend from Samsun to Carsamba, a distance of 37½ kilometres (24 miles). The section from Carsamba to Terme on the Black Sea coast, about 22 kilometres (14 miles) is under construction, and an extension from Samsun westward to Alacom, 90½ kilometres (56 miles) is projected. The track is owned and operated by a private joint-stock company in which the Turkish Government has certain interests.

Anatolian and Baghdad Railways.

The Anatolian Railway, operated by the Turkish Government, has a total length of 1,032 kilometres (641 miles), including the Haidarpasha-Ankara branch (578 kilometres), the Eskisehir-Konya branch (435 kilometres), the Arifie-Adapazari branch (9 kilometres), and the Alayunk-Kutahya branch (10 kilometres). For purposes of administration the Anatolian Railway and the section of the Baghdad Railway from Konya to Yenice, 346 kilometres (215 miles) in length, were combined in 1914, and the system is commonly referred to as the Anatolian-Baghdad Railways. Both railways have kilometric guarantees from the Government. The continuation of the Baghdad Railway from Yenice to Nissibin is operated at present by a French concern, the Chemin de Fer de Bozanti-Adana-Nissibin et Prolongement. The main line from Yenice to Nissibin has a total length of 750 kilometres (466 miles). One branch line runs from Toprank Kale to Alexandretta on the Syrian border, over a distance of 59 kilometres. Another branch, extending from Derbezie (west of Nissibin) northward to Mardni, has a length of 25 kilometres (15½ miles).

Originally the Mersin-Tarsus-Adana Railway was owned and operated by the Anatolian Railway Company. The track from Yenice to Adana also is used by the Yenice-to-Nissibin section of the Baghdad Railway. Subsequent to the War, it was taken over by a French company operating the Yenice-Nissibin line under the same conditions as the latter, but the owner was still the Anatolian Railway Company. On December 10, 1928, when the agreement was concluded between the Government and the Anatolian Railway, the Mersin-Tarsus-Adana Railway was sold to the Turkish Government.

The section of the Oriental Railways within present Turkish territory is operated by the Société Anonyme des Chemins de Fer Orientaux and is 337 kilometres (209½ miles) in length. It is stated that the capital involved in the Turkish section of this railway amounts to approximately £T2,000,000 gold. Rolling stock in operation in 1926 consisted of 45 locomotives, 208 passenger cars, 810 freight cars, and 22 baggage cars. Passengers carried totalled 3,653,979 (3,532,054 in 1925) and freight amounted to 106,371 tons (97,590 tons in 1925).

The two railways, Arpacay (Georgian frontier)-Kars-Sarikamish and the Sarikamish-Erzroum-Maden Yenikeuy, both operated by the Turkish Government, had in operation in 1927 equipment comprising 67 locomotives, 30 passenger cars, and 605 freight cars. The Sarikamish-Erzroum-Moden Yenikeuy line is 230 kilometres (143 miles) in length and of 0.75-metre gauge, while the Arpacay (Georgian frontier)-Kars-Sarikamish line is 124 kilometres (77 miles) long and of 1,524 metre gauge. The organisation of the lines is not yet completed, and operation is conducted in an irregular manner.

The line from the Persian frontier to Bayazit and Karaköse, with a siding connecting Bayazit with Bayazit Agha is of 1-metre gauge and is 170 kilometres (105½ miles) in length. This system is operated very irregularly, if at all, and is in very poor condition. It appears that, owing to its very slight economic importance, the Government does not consider any improvements at present. The Mudanya-Bursa Railway, operated by the Société Anonyme Turque du Chemin de Fer Mudanya-Bursa, is of 1-metre gauge and has a total length of 42 kilmetres (26 miles). No kilometric guarantee is given to this line, which is operated profitably. Rolling stock operated by the railway in 1926 consisted of 6 locomotives, 27 passenger cars, 62 freight cars, and 2 baggage cars. The Illidja-Palamoudlauk (Aliaga-Palamut) Railway, operated by the Société du Chemin de Fer Illidja-Palamoudlouk, crosses a rich productive district west of Balikesir and north of Izmir, and runs from Palamut to Aliaga on the Ægean coast. Its track is of narrow (0.60 metre) gauge, and its total length is 29 kilometres (18 miles). The line was built by private interests and is of local importance only.

The Directors of the London and Lancashire Insurance Company have appointed Mr. F. J. Cottle and Mr. G. A. Rutter assistant secretaries.

The traffic receipts of the South Indian Railway Company for ten days ended May 20 amounted to £E7,263, making the total from April 1 £E40,296.

MOTOR TRANSPORT IN THE SUDAN.

The question of motor transport is beginning to assume relatively as much importance in the partially developed countries of the Near East as it has for some time past assumed in the highly developed countries of the West (says an article in the *Monthly Journal* of the Sudan Chamber of Commerce). In regions where till quite lately only the "ship of the desert" could go, and where for a long time it will not be possible to lay a railway line, the motor vehicle is effecting nothing less than an economic revolution. It would therefore be interesting to review the present position in the Sudan, casting a glance at the rapid progress of the last ten years; and to examine briefly the outstanding aspects of the question with regard to the future.

On January 1, 1928, there were according to statistics compiled by the International Chamber of Commerce, 31,000,000 motor vehicles in the world, comprising private cars, motor-cycles, lorries and omnibuses. Of these 1,762 were the Sudan's share. By January 1, 1930, this number had increased to 3,183, of which 2,820 were cars and lorries. In the last ten years the Sudan has purchased motor vehicles (excluding motor-cycles) worth £E666,890; while the total value of last year's imports is approximately 2 per cent. of the total import trade of the country for the same period. To this figure, moreover, must be added the value of motor spirit consumed by these vehicles, which roughly amounts to about £E70,000 a year, as well as the value of tyres, spare parts, etc., imported separately. In considering the bearing of motor transport on the internal economic development of the country it is in lorries and public vehicles, functioning in the Provinces that we are chiefly interested. The appearance of the motor car in the Sudan as a vehicle of public transport, carrying merchandise and passengers from one town to another, dates back only to three or four years ago. Since that time inter-provincial transport has rapidly advanced till it has come to be a regular feature of certain districts. The principal routes are the following: Khartoum—Wad Medani and stations en route; Wad Medani—Gedaref; Gedaref—Kassala; and El Obeid En Nahud—El Fasher, a total distance of some 700 miles. Besides these there is a network of secondary routes within the Gezira and in Kordofan Province. The traffic along these routes is not of course regular all the year round. Its intensity varies greatly according to the season. During the rainy season there is very little of it, as the roads are for the most part intractable. At the height of the dry season, however, there are from 10 to 15 passenger and goods lorries going and coming daily between Khartoum and Wad Medani. These lorries are licensed to carry 22 passengers each, and they more often than not are packed full; so that from 220 to 330 persons travel daily on this line between Khartoum and Wad Medani. The usual fare for the whole journey (100 miles) is PT10 per person; and for goods £E1.500 m-m. per ton. Between Wad Medani and Gedaref there is an average of 3 or 4 lorries travelling daily, carrying both ways 60-80 passengers; while between Gedaref and Kassala, at the height of the season, there are about 8 to 10 lorries carrying to and from some 160 to 200 passengers daily.

Along the above routes, however, motor transport is only an alternative to railway transport. It is in Kordofan and Darfur, on the other hand, that the motor vehicle is doing its most useful work. There are 8 principal itineraries in Kordofan and Darfur: (1) El Obeid—Dilling—Talodi—Tunga (332 miles), (2) Talodi—Haiban—Delami—Rashad—Rahad—El Obeid (191 miles), (3) Rashad—Tagali—Kaka (140 miles), (4) El Obeid—Bara (38 miles), (5) El Obeid—El Nahud—El Fasher (396 miles), (6) El Fasher—Nyala—El Geneina—Abeshr (344 miles), (7) El Obeid—Abu Zabad—El Nahud (130 miles), (8) El Obeid—Abu Zabad—El Zabad—El Odaya—Muglad—Abu Gabra (310 miles). There are altogether some forty public cars or lorries operating on these several routes. Departures are weekly. For merchandise the rate is P.T. 6 per mile per ton up to 100 miles, and P.T. 7 beyond this distance; while for persons the fare varies between P.T. 5, and P.T. 10 per mile, each passenger being allowed some 50 lb. free luggage. It is roughly estimated that some 600 persons and 30 tons of merchandise are transported monthly on these routes.

The lorry on the above-mentioned routes does an average of 100 miles a day in 8 hours. The chief difficulty of motor transport in Kordofan and Darfur is the lack of benzine depots in the towns lying on the motor routes, which means that every car leaving El Obeid on any of the routes mentioned above has to carry a sufficient quantity of benzine for the return journey, as well as for the whole outward journey. The creation of depots at one or two of the most important centres would be a great help, and this, we understand, is being contemplated by the organisers of motor transport in that province. The average life of a lorry or car operating on those routes is one year. The nature of the ground differs greatly from one part to another. Where the soil is very clayish, there are in the dry season cracks of so huge a size as to render progress extremely difficult. The difficulty of having to cross Khors (rain torrents) in the rainy season and immediately after it, is being partly overcome by the building of what are known as Irish Bridges across the Khor beds, that is, laying a bed of concrete across the Khor bed, uniting both ends of the road, so that a car can ford the Khor without any risk of being stuck in the muddy bottom. The best roads are in the Nuba Mountains.

That motor transport is greatly helping in the process of economic development is certain; that it will play an increasingly important rôle in the future is equally certain. There is, however, a disadvantage attaching to the initial stage, namely, that the purchase of such a comparatively large number of motor vehicles, and the cost of ruuning them (i.e., the purchase of the necessary quantities of motor spirit, oils, etc.,) draw out of the country a substantial amount of cash, thus contributing to the shortage of liquid money in the local market. Under present purchase facilities there is a danger that more cars and lorries will be purchased than is necessary for the country at the present stage of its development. This would react badly not only on the general economic situation but also on the motor transport business itself.

BANQUE MISR (S.A.E.)

Capital L.E.1,000,000 (Fully Paid) - Reserve L.E.615,453

HEAD OFFICE: CAIRO.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended June 7:—

Grain.—Arrivals of grain at shipping centres increased considerably during this week, with an expectation of further important quantities coming forward during the next few days, and these circumstances had the effect of bringing about a decided improvement in the grain market here, which has recently been characterised by complete stagnation. The main inquiry has been from Antwerp, for which port several shipments of Yugoslavian wheat, brought down in lighters, and also of Roumanian wheat have been and are still being effected. The improvement in the position has been enhanced through the English and Irish markets continuing their purchases of comparatively large quantities of maize for prompt and July shipment. The freight market was consequently livelier this week, enabling stale tonnage to complete at rates between 9s. 6d. and 10s. 3d. Continent, whilst for U.K. ports from 11s. 9d. to 12s. 6d. has been accepted for prompt shipment. A large prompt steamer was fixed at 12s. 6d. Rotterdam, 13s. Antwerp, Amsterdam.

Timber.—Further heavy rains have again somewhat impeded the transport of ready timber to the loading ports. Shippers are therefore cautious in entering into fresh engagements. A restricted demand from abroad has caused a general reduction in prices, which was decided upon at a meeting of the most important producers, held lately. Five or six vessels are loading for Greece and these have swept the market for that destination. Small parcels for Rotterdam, shipment June and July have been placed at £7 15s. and £8 respectively and there are still some parcels on the market for Rouen. Rates of freight are in the neighbourhood of £5 10s. to £5 15s. for Greece, £5 15s. Alexandria, £7 15s. Syria and Palestine, £7 Sicily and £7 10s. South France.

Weather and Crops.—The weather has been very changeable. On Tuesday, June 3, there was a considerable fall in the temperature which dropped still further on Wednesday, and it is still remarkably cool for the season. It has generally been rather cloudy and rain fell more or less abundantly throughout the country on Wednesday, June 4, measuring 10 to 49 m.m. (about ½ to 2 inches), whilst local showers, sometimes violent, were experienced in many districts during the rest of the week, again doing some damage to railways. Hail has caused serious damage to crops in limited areas in several districts, but not to such an extent as to prejudice the excellent prospects of the crops in general.

Sulina.—Bar depth remains 24 feet, and as the flood season is now practically over, there is no reason to fear any reduction. River minimum 24 feet.

Constantza.—This week about 1,800 tons of grain arrived from the interior and about 2,400 tons were exported, mostly to Hamburg. At the time of writing a steamer is loading about 8,000 tons for Continental destinations. Eleven vessels loaded about 49,000 tons of petroleum products and three took oil fuel for bunkers. To facilitate further the loading of benzine and paraffin oil, new pipe lines are being laid from the shore tanks to the berths.

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

CYPRUS TRADE DEPRESSION.

The report on Cyprus trade for April shows a considerable falling off in both imports and exports as compared with April last year, and both were also below the quinquennial average. For the four months January-April the following are the values of imports and exports, as compared with the same period last year:—

	Imports	Exports
1929	£619,915 ...	£568,523
1930	£527,299 ...	£398,330
Decrease ...	£92,616 ...	£170,193

These figures show the continuance of trade depression. The principal decreases in imports were: Flour (—£25,808); cotton good (—£6,406); and edible oils (—£4,696). There was an increase of £6,246 in the import of petrol, large imports of which were due to a rumour of increased duties. The principal decreases in exports were:—Carobs (—£32,554); pyrites (—£9,945); asbestos (—£5,551); raisins (—£4,637); and cotton (—4,426). Shipping was above the average.

NEWS FROM ALL SOURCES.

The traffic receipts of the Suez Canal Company from May 31 to June 6 amounted to 20,400,000 francs.

The Egyptian State Railways have given contracts for steelwork to H. J. Skelton and Co., London, and P. and W. McLellan, Glasgow.

The South Indian Railway Company has under consideration a scheme for the electrification of the Nilgiri Mountain Railway.

An association of grapefruit growers has recently been formed at Tel Aviv with the object of improving cultivation, packing, and sales organisation.

The petroleum products exported from Roumania during March amounted to 176,876 tons, as compared with 237,206 tons in the preceding month, and 181,804 tons in March, 1929.

The Eastern Telegraph Company, Ltd., announce the payment on July 15 next of a dividend at the rate of 3½ per cent. per annum, less income tax, on the Preference stock of the company for the quarter ending June 30.

The net profits of the Bank of British West Africa for the year ended March 31 amounted to £121,822, as against £128,331. With the balance brought in the available total was £175,432, as against £180,610. It is proposed to maintain the dividend at 6 per cent., and after allocating £25,000 to the contingency fund and writing £25,000 off premises, to carry forward £53,432.

Barclays Bank (Dominion, Colonial, and Overseas) have received the following cable from their Cairo office:—The statistics for Egyptian trade from February 17 to February 28 are as follows:—Total imports, £E714,785; total exports, £E1,150,065; cotton exports, £E961,129. Imports from February 1 to 16, when the old Egyptian Customs Tariff expired, amounted to £E8,709,281.

The Board of Directors of Barclays Bank (Dominion, Colonial, and Overseas) have declared interim dividends for the half-year ended March 31 last at the rate of 8 per cent. per annum on the Cumulative Preference shares and at the rate of 4½ per cent. per annum on the "A" and "B" shares, subject to deduction of income tax at the rate of 3s. 9d. in the £ in all cases, payable on July 17.

The Bulgarian Customs duties collected on cotton and woollen materials imported from abroad and certain other imports have been increased as from June 3. The increase is arrived at indirectly by raising the coefficient by which the paper leva is calculated as compared with gold. In Customs transactions the accepted ratio has hitherto been 20 paper leva to one gold leva. Henceforward the Customs authorities are to reckon the gold leva at 27 paper leva.

Company Meeting.

ANGLO-PERSIAN OIL COMPANY.

Record Net Profits.

The Haft Kel Field.

Sir John Cadman's Speech.

The twenty-first ordinary general meeting of the Anglo-Persian Oil Company, Ltd., was held on June 17, at Winchester House, Old Broad Street, London, E.C. Sir John Cadman, G.C.M.G. (Chairman of the Company) presided.

The Secretary (Mr. John Clark) read the notice convening the meeting and the report of the auditors.

The Chairman said:—Ladies and Gentlemen,—The report and accounts have been in your hands for ten days. May I assume that you have read them?

Accounts.

The year under review has been one of ordered progress, and there is little subject for comment in the accounts. On the last occasion we met, the period concerned was of nine months only; we now start with our first complete financial year ending on December 31. As we have also re-arranged the balance-sheet to conform with the new Companies Act, it is somewhat difficult to compare the present with the preceding results, but I hope the figures given in red on the balance-sheet have helped you to understand the position.

The increase in investments is mainly due to our participation in the Consolidated Petroleum Company, and the large increase in creditors is partly caused by an amount still due at the end of the year but since paid in respect to this investment. There are also notable increases in the royalty due to the Persian Government and in British taxation.

The net profit for the year amounted to the record figure of £5,206,761, which more than justifies the forecast made by me on the occasion of the last meeting. From this net profit we have deducted for extra depreciation £352,465, for the usual reserves £300,000, while £1,000,000 has been placed to general reserve. You will further note that a special allocation of £500,000 has been made to Preference share reserve. This has, in effect, come out of the large "carry forward," which is no longer required now that our liability for excess profits duty has been settled and paid. The resultant balance of profit has enabled us to recommend a final dividend on the Ordinary shares of 15 per cent., less tax, making 20 per cent. for the year, and leaving £687,064 to be carried forward.

Production.

Persia.—The net production of oil from Masjid-i-Suleiman was approximately 5½ million tons—the rate of production differing but little from that of the preceding year. In reality the actual crude output of the fields was in excess of this figure, but refinery operations at Abadan resulted in a temporary excess of residue and consequent storage congestion which threatened to interrupt the continuity of refining. This excess was dealt with in a novel way. After some research and the fullest consideration of the many questions involved and as a result of our unique knowledge of the reservoir conditions at Masjid-i-Suleiman, we decided to reverse the pumping in one of the pipe-lines and, at little expense, we pumped this residue back to the fields and injected it into certain gas wells, connected only with the upper part of the oil structure. It was found, as expected, that the oil rock readily received the oil so injected. In this way, the great gas domal area has been used as a natural absorption plant. From tests subsequently carried out, our conjecture that much of the lighter fractions would be thereby recovered has been fully sustained.

Rapid strides have been made in advancing our knowledge of the new field at Haft Kel, which lies 35 miles south-east of Masjid-i-Suleiman. A structure exceeding 9 miles in length by approximately 2 miles in width, with a vertical head of oil exceeding 1,600 feet, has already been proved. One well, when tested, produced oil at the rate of 5,400 tons per 24 hours, with a flow head pressure of 630 lb. per square inch. There is no doubt that this well if opened out would compare favourably with the world's record. This field was connected with the Abadan pipe-line in November last and is now contributing regularly to our supplies.

From Naft Khana, the field you will remember to the north-east of Baghdad, partly in Persia and partly in Iraq, production was drawn in quantities sufficient to satisfy local requirements, which, however, are not large.

In areas under test, drilling operations proceeded normally. Gas at very high pressure has been encountered in one of them, and there is a possibility that oil may be proved down the flanks of this structure. In the search for new fields our geologists are applying the most modern physical methods, and they are much assisted by the Air Service which we have introduced for the greater mobility of the management.

Iraq.—Our investment in the Iraq Petroleum Company continues to increase with the inevitable additions to the capital required for proving and developing a modern oilfield.

Transport of oil to the coast will involve the laying of what is likely to prove one of the most costly pipe-lines yet constructed, since the area where the most important discovery of oil has been made lies some hundreds of miles from the Mediterranean coast, from which alone it can find its natural outlet to the world's markets. This will mean an outlay of many millions of pounds, which can only prudently be made when reserves of oil are proved sufficient in volume not only to fill the pipe-line but also to transport continuously through it a quantity of oil sufficient to meet pumping costs and the interest and amortisation charges on the huge expenditure anticipated. This proof is well in sight, and the policy of the Iraq Petroleum Company is being actively directed to completing it in the most economical and efficient manner possible.

Albania and Argentine.—The work carried out during 1929 on our fields in Albania and the Argentine was not productive of encouraging results. In the latter country we have had the benefit of the first-hand observations of Sir John Lloyd, who visited South America late in 1929.

Refineries.

The petroleum industry as a whole is faced at times with very difficult problems arising from the fact that the natural constituents of crude oil are by no means proportionate to the market demands for each and all of them. If refining operations were confined to simple processes of distillation, there would inevitably be a large and increasing disparity between the two. To a greater or lesser extent this instability has always been present. In pre-motor days, petrol was practically a waste product, and was accordingly destroyed. To-day the situation is entirely reversed, and were it not for the immense advances made in the processes of distillation and refining, and, above all, in cracking heavy oils into lighter products, the world demand for petrol would automatically have involved the continuous production of large excesses of other products, and besides wasteful earlier depletion of the crude would have created a problem of the first dimension.

Our refinery programmes are under constant review with these considerations uppermost in mind. I do not expect ever to be able to report to you that we have reached a static condition, for the simple reason that there is nothing static in industrial science, or in the character of the market demand. We are, however, well abreast of the times, and the plant and equipment already completed, or now under construction, are capable of converting the crude oil into the constituents which the market most needs, and of ensuring in almost every circumstance a complete producing equilibrium from the field to the market. At times, however, the maintenance of such equilibrium may prove excessively expensive. It is as an insurance against such a contingency that a fields topping plant is being established, the function of which will be to eliminate on the fields, when occasion demands, any surplus constituents for return direct back to storage in the oil rock.

Let me finally assure you that no effort is being spared to investigate the possibility of extracting and marketing new products from our crude. The whole range of our operations from start to finish is coherent and interdependent, and the most scientific and economic methods are being adopted not only in respect of major operations but also in regard to the many auxiliary services.

EGYPTIAN GOVERNMENT.

ASYUT BARRAGE.

THE EGYPTIAN GOVERNMENT intends shortly to INVITE TENDERS for the remodelling of the Asyut Barrage across the Nile in Upper Egypt. The works will comprise the building of about 200,000 cubic metres of masonry, mainly in the form of additions to and extensions of the sub-structure of the Barrage. An additional lock will also be built and new sluice and lock gates will be erected to replace those now existing. Tenderers may quote for either or both the masonry and the ironwork of these works.

The Government will reserve the right to accept or reject any tender; and it may accept or reject either the masonry or the ironwork part of the tender if both are tendered for together.

The drawings, contract, and specification are now being drawn up and can be inspected towards the end of June at the Reservoirs Department of the Public Works Ministry, Cairo, Egypt, and at the office of the Consulting Engineers, Sir Murdoch MacDonald and Partners, 72, Victoria Street, London, S.W.1. The exact date will be advertised later.

In order to obtain two (2) sets of the Contract documents tenderers must make a deposit of £E5,000 and a payment of £E50. The deposit and payment must be made to the Ministry of Public Works, Cairo, direct or through the National Bank of Egypt in Cairo or Alexandria; in London the deposit and payment must be made at the National Bank of Egypt, 6 and 7, King William Street, London, E.C.4, to the account of the Egyptian Government. The deposit of £E5,000 will subsequently be refunded. The sum of £E50 will be kept by the Government and not refunded to the tenderer.

This notice is given to enable those who desire to participate in the adjudication to make early arrangements for visiting the site while the river is in its normal summer condition and before it begins to rise towards the end of July.

A visit to the site before tendering by a competent engineer representing the tenderers will be one of the stipulations precedent to the acceptance of a tender.

Digitized by Google

It is the constant endeavour of the Board to ensure that there shall be complete unification of control and policy—to the entire exclusion of watertight compartments. The result, I am pleased to say, has been far-reaching, affecting every phase of the company's activities; a notable instance may be cited at Abadan, where we have by successive improvements increased the spirit yield from a ton of crude oil by over 40 per cent.

Shale Oil.

The position of the Scottish shale industry has undergone little modification. We have again received no dividend on our holding of ordinary shares in Scottish Oils, Ltd. By reason of over-production in other quarters, the market for sulphate of ammonia and paraffin wax has been seriously depressed.

The first cracking unit to which I referred last year is now in satisfactory operation, and the proposed addition of further plant should aid in placing this industry on a more stable basis.

Shipping.

An improvement in freights during 1929 and the early months of 1930 enabled us to sell advantageously nine of the older and less efficient units in our fleet—their total deadweight tonnage being 62,000. These vessels were all built between 1893 and 1916.

In order to replace them and to provide facilities for expansion in trade, contracts have been placed in Great Britain for nine new vessels of a deadweight tonnage amounting to 83,000. These vessels will be completed and delivered to us during a period terminating in the spring of 1931. Thereafter the fleet should consist of 85 ocean tankers with a total deadweight tonnage of 780,000.

Marketing.

Sales in all market continue to show satisfactory expansion. Prices remained remarkably stable from March onwards, and no important changes have since occurred, notwithstanding the high freight rates ruling towards the end of the year. We have continued to give the closest attention to distribution costs; much reorganisation has taken place, resulting in considerable economies.

The arrangements to which I have alluded on previous occasions for marketing our products in India continue to work well. In addition, anticipations of the advantages which would accrue from our investment in the Consolidated Petroleum Company have been realised. Mr. Heath Eves visited, during last winter, the areas in Africa covered by this company, and was impressed with the progress already made and the scope which exists for further development. There was ample evidence of the ability and keenness of the staff of the Consolidated Company, who were energetically and loyally working in the interests of the new company.

I told you last year of the steps which we had been taking to enhance the quality of our motor spirit; I am glad to say that our new "BP" spirit had a most satisfactory reception from the British motoring public and that its popularity continues. We can claim to have a spirit, admirably adapted to the requirements of the modern engine and representative of a notable achievement in industrial research.

Before passing from the question of marketing, I should like to say that the Board is fully in sympathy with the widespread desire to prevent the defacement of the countryside by unnecessary and unsuitable advertisements. We have, for some years past, steadily reduced the number and size of our advertising signs in rural districts and have used our influence to prevent unsightly displays.

Position in Persia.

Notwithstanding the incessant claims on his time, His Imperial Majesty the Shah managed, in January last, to devote several weeks to a tour of the southern province of Khuzistan, during which the inspected several centres of the company's activity, notably the refinery at Abadan. He expressed himself as greatly impressed with the progress made since his last visit, and caused a telegram couched in stimulating and eulogistic terms to be sent to London. His Majesty's visit, as you may well imagine, afforded a great stimulus to all our workers in Persia, and still further advanced the good understanding that exists between the Persian Government and the company.

Persia has been, and continues to be, faced with many difficult problems of administration. A vigorous and progressive policy of modernisation is being pursued—a policy which is much helped by the remarkable development now taking place in the means of communication throughout the country. Great progress has also been made in establishing the machinery of law and order throughout the land. The national policy of reform, which is resolute and far reaching, also involves considerable changes in the general fiscal organisation. It is not for me to comment on this beyond stating that, where the company's interests are affected, our representations are assured of a fair and sympathetic hearing from His Imperial Majesty's Government. For our own part, let me add that we realise how closely the welfare of this company is associated with that of Persia. It is our earnest desire that we may continue to be regarded, not merely as a great commercial asset, but as a proved well-wisher to Persia and the Persian people. We welcome everything that makes for prosperity and good government in that country, and we are proud to think that—so far as a commercial organisation can do so—we are helping to make these things possible.

I would like to mention the pleasure we have all felt in learning that the good understanding existing between Persia and Iraq has found its latest expression in the exchange of diplomatic representatives between the countries. I have no doubt that their efforts will result in an amicable solution of outstanding problems.

I am sorry to have to end my remarks on Persia by again asking you to record our deep sympathy with the victims of yet another disastrous earthquake in the north—comparable with the Khorassan disaster to which I alluded last year. As on the previous occasion, the Board deemed it only fitting and right to make a contribution to the relief fund, and I am sure that this action will have your full approval.

Rationalisation.

Good progress has been made throughout the year with the efforts to eliminate from the petroleum industry those elements which make for waste, instability and uneconomic production. I cannot too often repeat that these efforts are made as much in the interest of the public as of the industry itself. Profuse production and irregular prices bring enduring advantage to no one; this is particularly the case with petroleum. Notwithstanding the many discoveries that have been made—discoveries that have falsified the predictions of all the pessimists—it is fairly certain that the day will come when our successors will be faced with a shortage of the crude petroleum which now flows so lavishly from the earth. They will have to face the problem in their own way, and I am not suggesting that we should tighten our belt on their account. After all, the plea for conservation can be placed on too altruistic a level. There are many possibilities of waste in the actual methods of field production—waste by which a large proportion of the recoverable oil is left irretrievably in the ground owing to faulty technique and irresponsible drilling. Further, uncontrolled production, without regard to the world's capacity of economic absorption, has long been responsible for a deplorable degree of wastage and disorganisation.

It has been generally recognised for a considerable time past that blind and reckless competition is at the root of these evils. It is, however, one thing to recognise the evil, another to remedy it. The diversity of interests is indeed so great that to find a complete remedy seems barely feasible, but I am glad to say that the endeavour to do so is very strongly and widely supported. I need hardly add that the Board is very actively co-operating in this movement, both by example and precept.

Staff.

It is always a pleasure to me to bear testimony to the excellence of our staff, wherever and however employed, on land and sea, and now in the air. Year by year we are reaping a larger benefit, not only from their accruing experience, but also from the keenness and enthusiasm displayed by them in their multifarious spheres of activity. Great achievements have been accomplished, great economies have been made and great projects have been and are being developed. None of these would be possible without a band of most efficient and loyal workers. The company is proud of its staff, and the staff of the company. I am sure that you will uphold the Board in every considered scheme they may from time to time

approve for the welfare of the various sections of the staff. In this connexion, I am glad to say that it has been found possible still further to extend our provident schemes so as to bring in yet further classes of workers in Persia, this country, and elsewhere.

It is difficult in a great corporation such as this to cater for every need of the many thousands of persons employed. Large numbers of them live in an environment devoid of the normal services which go to make a happy and contented people. Much, however, has been done. In Persia, particularly, the social services have been developed in a manner commensurate with the needs of the growing communities, both Persian and British, grouped in our various working centres. Social and moral welfare are closely related things and the latest movement to assist British employees has been the appointment of a chaplain. In creating this new service—which has been warmly welcomed—we are in the first place indebted to Mr. D. B. Kittermaster, of Harrow, who visited Persia to advise upon this difficult and important problem. I have also to acknowledge the invaluable assistance that is being given to the company by the Rev. P. B. Clayton, the founder Padre of Toc H.

Prospects.

You will appreciate, if only from this year's satisfactory accounts, that the successful operation of a large company is not to be measured solely in terms of quantities produced. More and more, in the interest of the world at large, and of the shareholder himself, it becomes necessary to seek a principal advantage in expanding the economic value of the unit ton of crude oil. Crude can be made to serve many purposes. It can be burnt as a fuel without treatment. It can be distilled into simple fractions of petrol, kerosene, and fuel oil. But most advantageously of all, it can be subjected to a series of processes designed to yield a far wider range of products with a greater economic utility to consumer and producer alike.

Along these lines advances are being made, but much still remains to be done before we can be satisfied that the maximum potentialities of the crude are really being fully exploited.

What then are our prospects? The world demand for petroleum continues to expand. With it this company can look for a parallel expansion of its business, and failing the intervention of unfavourable and unforeseen factors, all the causes I have named should contribute to another successful year.

The Chairman concluded by moving the following resolution:—"That the report, balance-sheet, and profit and loss account for the year ended December 31, 1929, be received, approved, and adopted."

Sir George L. Barstow second the resolution, which was carried unanimously.

H.E. Mirza Eissa Khan:—Mr. Chairman, Ladies, and Gentlemen,—I have not much to say, but it is once more my pleasant privilege to address a few words to you, following the Chairman's lucid exposition of the results of last year's working of the company. When last we met I touched on the note of hopefulness in the Chairman's speech. I am delighted to see how well he has been able to sustain that note in the speech to which we have just listened. I am naturally particularly interested in his comments on Persia, and would thank him for his kindly references to my country, especially in regard to the marked progress that is being made under the wise guidance of His Imperial Majesty the Shah, a progress which he has in no way overstressed. The friendly relations that happily exist between my Government and the company are very largely due, as I have said on former occasions, to the helpful actions and the sympathetic personality of your Chairman. Future years will, I am confident, only strengthen these cordial relations to the mutual benefit of all concerned.

I was very interested to listen to what Sir John Cadman has said regarding the expansion of the economic value of the unit ton of crude oil. Speaking from a Persian point of view, I entirely agree with him that it is unwise to develop our national resources of oil profusely and wastefully without regard to the current demands of the world's markets. Every ton of oil exported leaves one ton less in the ground; we would naturally therefore rather see such a tonnage exported as will earn a fair profit on the world's markets, and not squander our precious resources of oil at uneconomic returns in markets already fully supplied.

We in Persia are very pleased with the royalty which has resulted from last year's operations. I have had occasion already to express the thanks of my Government to your Chairman, and I hope that the shareholders are equally pleased with the dividend that has been declared. We look forward to many future years of ever-increasing properity, under the wise guidance of Sir John Cadman, with the good will and assistance of my Government and the efforts of the company's energetic and loyal staff.

The Chairman then moved that a final dividend of 15 per cent. per annum, less income tax, making a total for the year of 20 per cent., be declared on the Ordinary shares, and that such dividend be paid on July 31, 1930.

Lord Greenway seconded the resolution, which was unanimously approved.

The Chairman then moved the following resolution:—"That Lord Greenway, Sir Hugh Barnes, Sir John T. Cargill, Messrs. H. B. Heath Eves, and Mr. F. W. Lund be and are hereby re-elected to the Board."

Sir E. H. Packe seconded the resolution, which was carried unanimously.

The auditors, Messrs. Brown, Fleming, and Murray, were re-appointed, and the meeting ended with a vote of thanks to the Chairman, which was briefly acknowledged.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 5, state:

During the past week the market has been erratic and the week's summary of price movements is as follows:—Sakellaridis: July, 28.02 dollars, 0.07 dollars down; November N.C., 23.85 dollars, 0.76 dollars down; January N.C., 24.00 dollars, 0.78 dollars down; March, 24.38 dollars, 0.77 dollars down. Ashmouni: June, 19.80, unchanged; August, 18.00 dollars, 0.25 dollars down; October N.C., 16.90 dollars, 0.48 dollars down; December N.C., 17.18 dollars, 0.49 dollars down; February N.C., 17.55 dollars, 0.45 dollars down; April N.C., 17.83 dollars, 0.48 dollars down; June N.C., 18.20 dollars.

Sakel.—The past week has been notable chiefly for Monday's session when, on rumours that the Government were about to interfere in new crops, shorts were stampeded and the price of November forced up over half a dollar to 24.75 dollars. This price held for the next day, but yesterday and to-day a wave of pessimism submerged both the cotton and share markets, and prices for the unpegged new crop positions close at the lowest of the week and of the season.

The Government called a conference of native growers and merchants to Cairo on Wednesday to consider suggestions for the disposal of its stocks. No official announcement has been made, but it is generally understood that the conference advised the Government to offer from its stock those qualities not otherwise procurable on the market, at cost plus expenses, until the dates of the first arrivals of new crop cotton. From those dates, it advised that the existing old crop stocks should be held off the market for a year unless prices touch 30 dollars for Sakel and 20 dollars for Uppers. No intervention in new crops was advised and no reduction in acreage the following year. It now remains to be seen whether the Government will adopt any or all of these suggestions.

Apart from the above, there is little to write about the market. Demand from the trade is insignificant and almost entirely for low grades. It seems idle to express an opinion as to the future course of prices until the Government has decided on a policy, but otherwise nothing has happened which seems likely to relieve the general bearish nature of the situation. We give below the statistical position of Sakel in Egypt, as at the end of May:—Stock, Alexandria, 1,533,000 kantars; stock, up-country (about), 100,000 kantars; total,

1,543,000 kantars. At the same time last year the stock of Sakel in Egypt was about 1,125,000 kantars. We would add, for purposes of comparison, that exports of Sakel for the period June/August last season amounted to about 376,000 kantars.

The Sakel/Uppers new crop straddle (November/October) this week stands at 695 points, against 723 points last week and 1,176 points at this time last year.

Uppers have followed the decline in Sakel, but have been otherwise featureless. The first tender of June amounted to 512,000 kantars. We give below the statistical position of Ashmouni and Zagora in Egypt as at the end of May:—Stock, Alexandria, 1,837,000 kantars; stock, up-country (about), 10,000 kantars; total, 1,847,000 kantars. At the same date last year the stock of Ashmouni and Zagora in Egypt was about 1,079,000 kantars. We would add, for purposes of comparison, that exports of Ashmouni and Zagora for the period June/August last season amounted to about 775,000 kantars.

The Ashmouni/American new crop straddle (October/October) this week stands at 236 points, against 236 points last week and 288 points at this time last year. The week's receipts amount to 53,936 kantars, against exports 78,420 kantars; the stock in Alexandria stands at 3,906,624 kantars.

Spot.—As from May 31 last, the spot market will be closed on Saturdays until further notice. The total turnover this week amounts to about 2,500 bales, of which we estimate 750 bales Sakellaridis, 1,600 bales Ashmouni and Zagora, 100 bales Pilion, and 50 bales other varieties.

Sakellaridis.—Practically the entire turnover this week consists of low grades and Sekina. There has been a small demand for Fully Good Fair, but this cotton is practically non-existent on the market.

Ashmouni and Zagora.—There was some inquiry for Good Zagora at about last week's premiums, but the bulk of the business was concentrated on Good Fair and below; spot differenecs for these grades are slightly easier.

Pilion.—A few lots of high grades changed hands at about last week's premiums.

Other Varieties.—There was a small demand for Fully Good Nahda without change in the premiums.

Crop, 1930.—The temperature has continued favourable and the plant is progressing well. Leaf worm attacks are reported in many districts of the Delta but are being controlled. Water is sufficient.

The report of the Alexandria General Produce Association for May reads:—

Lower Egypt.—The temperature during May was uneven; rather cool weather during the first fortnight of the month was succeeded by a temperature favourable to the development of the plants. The crop presents a regular appearance; the plants are healthy and in good condition, but are still slightly behindhand. It is confirmed that the proportion of land which has had to be re-sown is very small this year, and the plants on such land are in good condition. A few sporadic cases of Wilt, which attacks Sakellaridis more especially and dries up the plants, have been reported. Locusts have appeared in certain districts but have not attacked the cotton plants. Water for irrigation has been sufficient.

Upper Egypt and Fayoum.—The temperature during May was favourable to the plants. The crop is in good condition and the plants, although slightly less developed than normal, are healthy and vigorous. Locust swarms have been reported, but they have done no damage. Water for irrigation has been sufficient.

Notes of the Week.

The Egyptian Situation.

Once again the Wafdists have played into the hands of their critics among their own countrymen, who claim that they are essentially a Party of negation. It is the duty of a Government, it is pointed out, to govern, and a political party exists primarily with the idea of giving effect to its principles and policy through the medium of government. The Wafd, however, so it is urged by its Egyptian critics, has neither the liking nor the faculty for administering the country. As to whether this is or is not the case the outside observer has no means of forming judgment. What is clear is that the leaders of the Wafd—as if true to the contention that the Wafd is a Committee and not a political party—are at all times ready to subordinate practical considerations of administration to academic questions. Two years ago there was no evidence to show that the Public Assemblies Bill was of such vital importance to the nation that it was worth while dislocating the whole machinery of government over it; yet the Wafdist Government contrived to build a first-class crisis upon it, only in turn to abandon the Bill, and nothing more has been heard of the particular clauses of that measure which were to be pressed through Parliament at all costs. In the present instance, when Egypt is in serious need of a tranquil existence and expert administration, in order to surmount economic difficulties of the first order, the Nahas Cabinet has preferred to resign office as the result of a disagreement with the King over a question which, quite apart from the issue raised by the Bills that King Fuad would not allow to be submitted to the Legislature, could not become a matter of practical politics so long as the Nahas Ministry continued to carry out the normal functions of a Government. Egypt accordingly appears to present the interesting anomaly of a political Party, commanding the support of the overwhelming majority of the people, which grows tired of office or finds reason to resign it after a few months in power. Short-lived Governments are a curse to any country, and it is obvious that, while the Wafd retains its big majority in Parliament, no Ministry formed outside its ranks can be sure of enjoying any length of life. The way out of this difficulty adopted two years ago was the suspension of Parliament. That solution was interrupted last year by the British Government, which, in its anxiety for a treaty with Egypt, insisted upon the immediate restoration of parliamentary institutions. By this means it weighted the scales in favour of the Wafd and a return to a system which Egypt has not yet proved herself able to work successfully. The whole problem is essentially an internal one, and the only point on which there can be certainty at the present moment is that no British Government, however well intentioned, will make itself directly or indirectly responsible for driving Egypt a second time into a political *impasse*.

A Possible Respite.

For the present the position in Egypt is that a Ministry has been formed under Ismail Sidky Pasha, who has more experience as an economist than any other Egyptian politician and for that reason is well fitted to take charge of the country's affairs at a time when economic problems are uppermost. The future course of events must turn mainly on the attitude of the Wafd with its large parliamentary majority. Parliament, which was within a few weeks of an adjournment over the summer recess, has been prorogued for one month, under powers conferred on the King by the Constitution, and in this way the new Ministry may hope to avoid conflict with the Chamber or Senate possibly for several months. The change of Ministry can have no effect upon the question of an Anglo-Egyptian treaty, which seems likely to remain for some time to come where the Egyptian Delegation to London left it. One compensation, indeed, that Nahas Pasha's Government may find in its resignation is that it will no longer be expected to explain the logic of its position in regard to the treaty negotiations. The emphasis that the Delegation laid on its having secured the friendship of Great Britain was the more gratifying, because in 1928, when Nahas Pasha was dismissed from office, he declared that his successor would never have taken the course that he did without being certain of British support and that the situation in Egypt resolved itself into the question: "Do the British desire our friendship or our humiliation?" As a result of his visit to London he was able to answer that question himself in no uncertain terms. Among Egyptians, however, this emphasis on the certainty of British friendship was beginning to be contrasted with the refusal to sign a treaty and the placing of the treaty proposals into diplomatic cold-storage for an indefinite period. Any new Ministry will, in all probability, be more

Digitized by Google

than content to leave them there, as the economic situation which it will have inherited will absorb most of its attention. Of the £E39,000,000 Reserve Fund that Egypt could command last year no less than £E28,000,000 have been immobilised in purchases of cotton and of the Public Debt; £E4,000,000 have been allocated as an agricultural reserve and £E5,000,000 are required to balance the current Budget. With only £E2,000,000 on which it could actually lay its hands on the morrow, the late Government was committed to a big Public Works programme and to the purchase of the whole, if necessary, of this year's cotton crop. It will be the duty of the Egyptian Government between now and the end of the year to deal with this unsatisfactory position, and the great test of Egyptian patriotism would seem to be reserved for the meeting of Parliament after the long recess, when the well disciplined majority in the Chamber, which will, without doubt, endorse the action of the Nahas Ministry in subordinating economic problems, however pressing, to questions, however academic, with a constitutional aspect, will have to pass judgment on the new Ministry's handling of a situation bequeathed to it by a Wafd Government.

The Syrian Situation.

Accounts of the reception by the peoples of Syria of the recently promulgated Constitutions are conflicting. One might have thought that the policy of perpetuating divisions, by the establishment of separate Constitutions for the various States into which the Mandatory Power has partitioned Syria, would have aroused resentment; and, indeed, according to reports from Damascus, that has been so. The High Commissioner, however, who recently arrived in Paris on leave, gave a very different picture of the situation in Syria—a picture, incidentally, which has been confirmed in certain independent quarters. M. Henri Ponsot stated that Syria had accepted the Constitution as a sound basis for future prosperity, that the sense of security, which was now complete, had stimulated tremendously the economic activities of the country, and that, in a word, the policy of the French in paying primary attention to questions of irrigation, water supply, road construction, and the like, had been completely vindicated. There is little doubt that more has been accomplished, in the economic sphere, under the French ægis in Syria than is commonly imagined. For instance, deserted towns are coming to life again, and the areas under cultivation are increasing. Yet there are still irreconcilables. It is reported that the Nationalist leaders of Syria State have protested strongly against the High Commissioner's recent actions, mentioning specifically his efforts to prevent the Constituent Assembly from fulfilling its mission, the division of the country through the promulgation of different Constitutions, the reservation in the local Constitution (contained in Article 116) which nullifies the principle of national independence, the maintenance of the present provisional Government, and the prevention of public meetings. Whether the emotion giving rise to these protests is merely an obsolete survival or a strong, continuous impulse, it is difficult to say, but in the opinion of the Mandatory Power, at any rate, it must be the former.

"Tourism" in the Near East.

The holding of the International Congress of Tourism this year at Istanbul is an event of some significance for the Turkey Republic, which thus found itself in the position of host to a score of touring organisations, representative of more than a dozen countries. The Congress was opened on May 31 in the historic Dolma-Bagtche Palace by Shukri Kaya Bey, Minister of the Interior, who laid stress on the sympathetic interest with which the Turkish Government would follow the proceedings. Tourism, he declared, in its normal functioning and while exercised in its own domain, contributes eminently to the realisation of a better knowledge of one another among the nations, and constitutes an element of the first order in the development of international collective life, in the fraternization and union of peoples, in a world an element in the sacred cause of peace. As Tourism meant something to Turkey, so, he hoped, Tourism would find that Turkey stood for something from the point of view of the tourist, who, though he might lack some of the amenities that the country is striving hard to provide, in the way of roads and hotels, would find much to interest him in the contemplation of a work of regeneration in so short a time. The Congress was opportune, inasmuch as it coincided with a realisation of the advantages that Turkey stands to gain from the development of a tourist traffic. Various regulations have been modified, in order that as many disabilities as possible that press on visitors may be removed, and a month ago the use by motor tourists of triptyques issued by the Touring Club of Turkey was authorised. Turkey, it may be stated with confidence, has only to establish a reputation for official friendliness and lenience to her foreign guests to become a popular goal for tourists on the strength both of the attractions of the country and of its position on one of the world's great highways.

The European Association.

In the current issue of its *Review of India* the European Association draws prominent attention to the increasing evidence of the failure of both the Congress party and the Liberal party to face the realities of the present situation. The Congress party have wasted time and energy on seeking for formulæ, and in noisily denouncing the "Satanic" Government. In a different way the leaders of the Hindu Liberals have also failed to face the realities of the situation. It is true that they have denounced the barren policy of civil disobedience, but they have made no real effort to organize their followers so as to enable the party to take an effective part in the Round Table Conference. On the other hand, the Muslims and the Europeans have recognised that the way to gain the objects which they have at heart is to organize their communities and to attend the Conference in London. That Conference is to be called to consider the Simon Report, and to find points of agreement among all parties in India as to the form of the future Constitution. The Association fears that a complete solution of the Indian problem is not to be found. On the one hand it will be a very long time before India is fit for self-government; and on the other hand, "the old system of Government through the British services in India cannot continue for more than one service generation after another dose of reforms."

THURSDAY, JUNE 26, 1930.

THE REPORT OF THE SIMON COMMISSION.

If we exclude the extremists in both directions, it will, we think, be generally agreed that this momentous Report is worthy of its high occasion. Devoid alike of picturesque and of sentimental writing, it gives a singularly clear view of the issues to be faced, and the manner in which they should be handled. Above all, the members of the Commission have made out their claim that they have kept the principle of Mr. Montagu's announcement of August 20, 1917, steadily in view. If the rate of advance towards the defined goal will not be so rapid as many in India hope for, expect, or demand, there is no retrogression in these proposals; there is, in fact, in almost every respect a real advance. The chief aim of the Commissioners has been to provide for a true federation of Provinces, and, it may be, ultimately of States, with full local self-government, subject to a central Government, unitary in form, but not responsible to the Indian legislature, though rightly subject to the pressure and influence of the latter. The difficulties in the way of a true federation are admittedly great. Other federations have been formed out of existing States with full experience of self-government. In India the process is to be reversed; the Provinces have in the first place to learn to govern themselves. The arguments for such a form of federation are, however, irresistible. The conditions of India are too vast and too diverse to allow of self-government, if the different Provinces do not have opportunity to develop on their own lines; and the creation of such a federation may ultimately permit of the Indian States joining as Federal units. Until they do so, there must be, as the Butler Commission showed, not one, but two Indias, and no purely Indian central government will be possible. The course recommended to be taken in respect of the British Provinces will, we think, meet with general approval. Dyarchy, it is agreed, cannot continue; the only possible course which would not be markedly retrogressive is to make all subjects transferred. Some doubt will be felt as to the transfer of the branch known as Law and Order. The only alternative would, however, be to make it a central subject; and this would render Provincial autonomy farcical. Doubtless the Ministerial Cabinet proposed will in many cases function badly and will depend on the good will of the majority; but it is not too much to hope that such good will is not unlikely in most of the Provinces. The extension of the franchise and the increase in the number of the members of the Legislative Council are inevitable, whatever difficulties they may cause. One point, however, is clear. The greater the power and freedom given to the popular representatives, the greater will be the necessity for the Governor to possess the right to interfere, to keep the machine of government in working order. The Governors of Provinces will, indeed, have to be picked men in future.

The proposals for the Central Government are more certain to meet the hostility of nationalist critics. Fair-minded men will not dispute the desirability of resorting to indirect election for the Legislative, or, as it is proposed to call it, the Federal Assembly; indeed, the principle of such election is familiar to Indian minds, and ought never to have been abandoned. The allotment of members according to population will be resented in the older and, as they think, more advanced Presidential Provinces, but much can be said for it, especialy as a basis for the entrance of Indian States, the possibility of which is hoped for in the Report. The retention of the Council of State and its reconstitution somewhat on the lines of the American Senate will also be generally accepted. The Report plainly states that its signatories do not recommend that the Government of India should at present be responsible to the Indian Legislature. It follows that it must remain responsible to Parliament, the ultimate guarantor of peace in India. This position will, doubtless, be fiercely assailed; but the Report justifies its assumption, on many grounds, the chief of which are communal dissensions and the Indian States. Another position which the Report takes up with equal firmness is that, as long as the Army is partly European in character and is responsible for the security of the Frontier, it cannot be subordinated to an Indian Legislature. The members of the Commission clearly affirm their support of the process of Indianisation that has been entered upon, but recognize that for many years it must be a "slender trickle." They recommend ,therefore, that the Army should be regarded as an Imperial concern, subject to an Imperial authority, who should be the Viceroy and the Commander-in-Chief, the latter being removed from the Indian Legislature, and the pressure of Indian politics. We think there can be no doubt of the essential soundness of this recommendation; but it must be recognised that it will excite the bitterest criticism.

Space does not allow of more than a brief mention of the most important of the remaining points. The immediate separation of Burma is recommended, chiefly on the ground that the demand is irresistible, and what must be done had better be done quickly. The subject of the Indian States is necessarily dealt with in faint outline only, but a very valuable suggestion is made that a greater Indian Council should be formed, for consultation and advice on matters that affect the States as well as the Provinces. The financial position as examined by Mr. Layton is not unhopeful, but its success depends on two propositions, the willingness of the Provinces to tax themselves, and the continuance of peace and order. The Commissioners are emphatic as to the necessity for maintaining the Security Services, the I.C.S. and the Police, without further diminution of the European element. They evidently would prefer this element in the Irrigation and Forest Departments also to be retained. The Report will, to many, seem to go beyond the limit of safety, while it will fall short of the expectations of still more. The latter, however, should note the Commission's remark that the inherent right of a man to smoke a cigarette must be curtailed, if he lives in a powder magazine; and India still enjoys many of the attributes of such a magazine. Many details may be open to criticism; but it is especially desirable that the Report should receive the support of reasonable men, and above all that it should not be bowdlerised in the vain effort to appease the irreconcilable. As the Report indicates, several of the safeguards recommended even by Mr. Montagu were expunged by the Parliamentary Committees. It may be hoped that no such fate will await this admirable Report. It should be accepted as it stands in essentials, or rejected altogether.

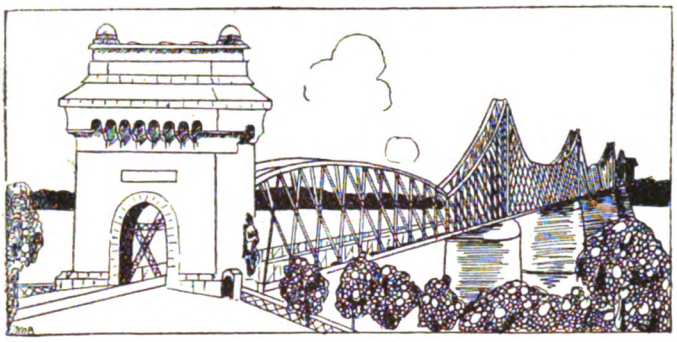
From Our Own Correspondents.



ROUMANIA.

Bucharest, June 18.

The Return of Prince Carol.

The joy and delirious enthusiasm with which the populace greeted Prince Carol on his arrival defy description, and the fuse lighted in Bucharest ran rapidly all over the Kingdom from one end to the other. This event is the dominant note in the present situation of Roumania, and its political importance is for the moment completely overshadowed by its romantic suddenness. It is clear that the general restlessness of the last few years, with their succession of crises, political, financial, etc., can be accounted for by the dynastic crisis. Indeed, if one seeks the cause of the abnormal civic conditions obtaining during these last few years—martial law, censorship and so forth—one finds that at the root of the violent political antagonisms lay the absolute necessity, for the Liberal Party, of preventing the National-Peasant Party from coming into power. It was not for the Liberals a question of political supremacy, but one of life or death. The cause of the stormy atmosphere of the last phase of the opposition of the National-Peasant Party, before they came into power was to be found in the dynastic situation created by the Act of January 4, 1926. This Act, conceived and carried out entirely by the Liberals, and suggested by them to the King, who imposed it on all parties, gradually became for the Liberal Party a question of principle.

Having enforced the Act arbitrarily at a moment when the health of Jean Bratianu and of King Ferdinand was failing, with the aim of assuring to the Liberals the maintenance of their supremacy for a long term of years, this party was obliged to uphold the Act by more and more arbitrary measures. They thus compromised themselves more and more *vis-à-vis* the person of the present King. The censorship, martial law and other vexatious measures had no other aim than to prevent any manifestations against the dynastic situation created by them. Proof of this is the fact that, no sooner was the censorship removed by the National-Peasant Government than a growing wave of popularity has led to the restoration of the former Prince Carol. The Maniu Government, being essentially constitutional, could not do otherwise than leave public opinion free to express itself, but it was also obliged to conform to the dynastic order that was established when it came into power. Hence an attitude on the part of the Government which has often disappointed many of the adherents of the Government party. For example, when one of the Regents, M. Buzdugan, died, contrary to the expectations of the great mass of the party and the majority in the Parliament, the name of Prince Carol was never mentioned by the Ministers as that of a possible successor on the Regency Council. It is hardly right, therefore, to say that Dr. Maniu has brought back Prince Carol. He let him come, knowing of and encouraging the relations that existed between the members of his party and the father of the young King Michael; but he did no more than keep within legal bounds the manifestations of public opinion in favour of the return of him whom the nation persisted in regarding not only as its legitimate King, but also as the only authority capable of consolidating the prestige of the Dynasty and of satisfactorily conducting the affairs of the country.

This wise attitude has rendered possible the return of the Sovereign under the most favourable conditions for the tranquillity of the State and for the maintenance of law and order. The King was not brought back by any party, nor by the Army, nor by a popular movement. He came back *proprio motu*. He made the journey with the help of some devoted friends. He put himself in the hands of his people. He was acclaimed by them, freely proclaimed by Parliament, elected by the nation, and was duly reintegrated in all his rights by the same Parliament. During the flight of Prince Carol over Roumanian territory and the few hours in which the decision of the Chambers was taken, the Maniu Government naturally made no attempt to restrict popular manifestations which expressed the will of the people. But no more convincing proof of the direction this was taking could have been given than the mighty wave that swept the Sovereign on to his Throne, rapidly and irresistibly, and it was clear that any obstructive attitude on the part of the Government would not only have been unpopular but highly dangerous to the peace of the country besides being entirely against the principles of the National-Peasant Party. The democratic principles of this party have found further expression in the suppression of the arbitrary Act of January 4, 1926. They were also expressed in the beginning of the supremacy of this Party by the first free elections ever held in Roumania, which brought them into power. The Liberal Party at the present moment has not only been worsted, but it will also be obliged completely to revise all its relations with the nation. This was understood at once by M. George Bratianu, who immediately separated himself from the Liberal Party when he saw that they were adopting a hostile attitude of the re-establishment of the Monarch. The son of Jean Bratianu followed the dictates of his conscience and of the tradition of his family, for the Bratianus have always considered themselves as the props of the Sovereign. Thus in a few seconds he effected the rupture of the anti-democratic policy of the Liberal Party. It had been responsible for two great democratic reforms, the agrarian reform and universal suffrage, but it had been powerless to improve the lot of four million small landowners who had been forced into a political economic status which was not just, and it had been unable to educate or gain the four million electors created by their

own electoral reforms. In fact these electors were violently suppressed every time they ventured to assert their rights as citizens, while the small proprietors were kept in a state of economic dependence by a fiscal programme occupied mainly with the protection of industry and the "revalorisation" of the currency, to the entire neglect of agriculture, which was reduced to the lowest ebb.

The National-Peasant Party, which has struggled against both these tendencies, was regarded by the Liberal Party as a formidable danger to them, because by intimating its intention of suppressing all vexatious measures against the manifestations of public opinion it was endangering the barriers that upheld the Act of January 4, 1926. It may be added that the attitude of the National-Peasant Party in regard to Prince Carol—arising naturally out of their democratic principles—showed great foresight and was a great political inspiration. The suppression of public opinion would have led sooner or later to a military *pronunciamiento*, but the events of June 6 showed clearly how repugnant it is to the Army to take any direct part in political affairs. The Army ardently desired the return of a Chief whose leadership they missed and who had given many proofs of his interest and of his capacity. But the Army awaited his arrival with arms lowered and acclaimed him with wild enthusiasm only after all the constitutional formulæ had been fulfilled.

The New Government.

After a vain attempt to form a coalition Government King Carol II entrusted Dr. Maniu with the formation of a new Cabinet. The present Ministry is almost the same as the last one presided over by Dr. Maniu and will follow out the programme of the latter. The only new Minister is M. Manoilesco—a staunch friend of the King, on whose account he was at one time put in prison by the Liberal Government—who has been appointed to the Ministry of Communications and Public Works.

ALBANIA.

The Census.

Tirana, June 11.

The results of the census of May 25 have surpassed expectations. They are given as follows:—

Prefecture.	1927.	1930.
Berat	116,670	142,616
Dibra	83,714	86,992
Durrës (Durazzo)	58,375	77,890
Elbasan	82,402	111,422
Gjinokastra (Argyrocastro) ...	127,904	143,926
Korça (Koritza)	131,570	147,536
Kosova	40,117	49,081
Shkodra (Skutari)	114,308	132,336
Vlora (Valona)	43,784	53,461
Tirana	34,782	57,808
Total	833,627	... 1,003,068

The return of 1923 gave the total as 814,380. The population of Tirana, which in 1923 was given as 10,845, and in 1927 as 16,513, is now stated to be 30,806. Since it was a town of little importance, until declared the capital of the country, its increase is quite intelligible. But the increase in the general total is mainly due to the thoroughness of this last census and carelessness on previous occasions. Even so, the authorities are not satisfied that the returns are entirely correct, owing to the reluctance of parents in country districts to declare to the officials who took the census the number of their children and their ages, since boys would be unable to escape military service once the authorities are in possession of these details. Accordingly, the headmen of villages are now required to compile and submit returns which will be compared with those obtained on May 25. Headmen whose returns are found to be false will be liable to severe penalties.

Rumours and Trade Opportunities.

The report circulated at the end of last month that

Italian troops had been landed near Shkodra, following an insurrection in the north, is yet another example of the mischievous fabrications which are constantly emanating from Yugoslav sources. There are no Italian troops in Albania and there has been no disturbance whatsoever. It is felt that, if Yugoslavia sincerely desires to maintain friendly relations with Albania, the Yugoslav authorities should discover the origin of, reveal, and disclaim responsibility for, such reports, which seem merely designed to do harm to Albania by discouraging foreign capitalists from interesting themselves in the country. There are many opportunities for profitable investment by established and reputable firms, which should not be discouraged by the failure of obscure and incompetent groups or individuals. British business men would do well to pay more attention to Albania, and to ascertain the true situation for themselves, rather than rely for their information upon the popular Press. Naturally, Italian competition will be encountered, but that is no valid reason why British firms should not compete. It is Italy's policy to develop Albania as a means of consolidating Albanian independence; but there is no Italian monopoly of opportunities, and even the firms operating under the S.V.E.A. are by no means all Italian. There are many industries, including tobacco, which capital could develop. With the construction of the road system there ought to be a market for British cars. Electric power is required. No contract has yet been made for the construction of the new quarter of Tirana, which will comprise some 800 houses. Tirana must have its sewerage and water systems. There are rich marsh lands to be drained. In fact there is everything to be done in a country which has only within the last two or three years acquired the necessary stability and security from foreign aggression to develop its resources. The problem of finance is admittedly a difficult one.

The 1930-31 Budget.

The Budget for 1930-31, approved by the King on May 17, 1930, balances with totals of 31,385,000 gold francs. Expenditure is estimated as follows:

	1929-30. Gold francs.		1930-31. Gold francs.
Ministry of Finance	4,847,078	...	5,406,841
Ministry of Justice	1,334,670	...	1,268,700
Ministry of Interior (and Public Health)	3,003,060	...	2,007,600
Ministry of Foreign Affairs	892,160	...	800,000
Ministry of Public Works (and Posts and Telegraphs	2,307,680	...	2,408,200
Ministry of National Economy	1,163,075	...	1,147,400
Ministry of Education	3,443,600	...	3,533,980
Headquarters of National Defence and Gendarmerie	14,834,077	...	14,722,279
Total	31,827,200	...	31,385,000

The above figures do not, however, altogether represent the true situation. For example, the expenditure of the Italian loan of 50,000,000 gold francs, which is allotted exclusively to the construction of public works (i.e., roads, bridges, ports, railway, Government buildings, irrigation and canalisation, improvement of livestock and agriculture, and studies (655,095 gold francs) is not shown. For work executed before December 31, 1929, 15,174,744 gold francs had been paid, and the amount paid out during the present year will probably reach a similar figure. Again, of the total for National Defence and Gendarmerie, 120,000 gold francs are allotted for Naval Forces, 150,000 for the Enti Kombëtar, and 3,595,000 for the Gendarmerie. The total military expenditure of 10,365,214 gold francs may seem high, but justification is sought in the history of the country during the last ten years. Moreover, the discipline and physical training imparted by compulsory military service are certainly beneficial.

Beer in Albania.

Inquiries have recently been made into the consumption of beer in Albania. The official return of beer imported during 1929 gives the total quantity of beer in cask as 4,290 kilograms, valued at 2,610 gold francs, and of beer in bottle as 464,929 kilograms, valued at 339,293 gold francs. Thus the total value of imported beer in 1929 would be less than £14,000.*

There is no reason to suppose that these figures are not reasonably accurate. Most of this beer is consumed at Tirana, Shkodra (Skutari), Durrës (Durazzo), and perhaps other towns near the coast. At Korça the consumption is restricted by the cost of transportation inland. Very little indeed is consumed in the rural districts, rakija and coffee being preferred. On the other hand, if beer could be provided by the glass, and at more reasonable prices than at present, there is no doubt that the consumption would be considerably increased.

Silver Currency.

Hotels, restaurants, and most business concerns in Tirana have, since June 1, refused to accept the silver *krone* (silver coins of all nations having circulated hitherto at a uniform value of approximately 3d.), owing to the fluctuations in the price of silver. The possibility of withdrawing kronen from circulation altogether is contemplated. The national currency is the *qindar* (cent), *lek* (there are quarter and half *lek* coins), the gold franc, and the napoleon. There are 20 *qindar* to the *lek*, 5 *lek* to the gold franc, and, of course, 20 gold francs to the napoleon, which is worth rather more than 16s. Notes of 5, 20, and 100 gold francs circulate.

Miscellaneous News.

It is reported that there will shortly appear a newspaper, with a weekly supplement in French.

The King visited the new Royal Military School at Tirana for the first time, on June 4. It is said that he was fully satisfied with the building and instruction. He left the capital on the 9th for Durrës (Durazzo), where he will remain during the summer.

A sale of the work of the refugees from Kosova, of which I spoke in a recent letter, was organised by Mrs. Pennington on Sunday, June 1. It was very successful, and it is very gratifying to know that this beautiful work is obtainable in London.

Through the invitation of Princess Senije Zogu, a crêche is to be opened in Tirana. Princess Senjie's work on behalf of the Albanian Red Cross, of which she is President, deserves the highest praise. She is also President of the Association of Albanian women.

* The Albanian figures are supported by those of Syria, which, with a population almost three times as great (2,962,046 in 1927-28), imported 1,044,294 kgs. of beer in 1927 and 1,410,519 kgs. in 1928.

CYPRUS.

Nicosia, June 3.

The Acting Governor.

Mr. Henniker Heaton took over the administration from May 15, on the departure of Sir Ronald Storrs. Mr. Gunnis, A.D.C. and Private Secretary, left a week later.

The Cyprus Exiles.

The Governor has replied to the request that the two Greek exiles, M. Katalanos and Dr. Zannettos, may be permitted to return to the island. With regard to the former it is stated that for the present permission cannot be granted. As regards the latter, it would appear that a more favourable decision may be conditionally given.

The Trade Mission.

The Committee which is to visit Palestine, Syria, Egypt and Greece, with a view to furthering trade with those countries, will sail from Larnaca on June 15. It is in charge of Mr. M. T. Dawe, Director of Agriculture, and other members being Mr. H. L. Jones, Chairman of the Imperial Ottoman Bank and of the Agricultural Bank, Mr. N. P. Lanitis, Director of the Cyprus Wine Company, and Mr. Caruana, Chief Clerk of the Treasury, as Secretary.

Agricultural Prospects.

In the vine growing districts the outlook is favourable; and should weather conditions continue to be favourable, the vintage should prosper. The Agricultural Department continues to fight various insect and other pests. Perhaps stronger efforts should be made to extend cultivation of mill barley, which has gained so decided a reputation. For malting purposes at home breweries it cannot be surpassed, and one of the largest brewing companies in England years ago expressed readiness to take any quantity of this grain that could be offered. Unfortunately the area suitable is rather limited.

Locusts having reached the winged stage, the purchasing centres in the four districts that have been invaded have been closed. The campaign has been carried out with much success, poisoned bran being successfully used in various places, including part of the Limassol district.

The rat campaign has also been continued, poison being laid in many places, including a Muslim tannery at Nicosia, the director of which reported that the result had been most successful.

As regards sericulture, it is much to be regretted that prices are still unfavourably affected in spite of the laudable efforts that have been made to develop the industry. Perseverance, however, should lead to a state of prosperity in an island which offers such opportunities for successful results.

In view of the present agricultural crisis, several largely attended meetings have been held at Nicosia, under the presidency of the Director of Agriculture, at which a number of resolutions have been passed for the improvement of agricultural methods, towards the carrying out of which it is necessary that substantial aid should be given. It is hoped that a sum of £26,000 may be granted from the Fund for the development of Colonies.

EGYPT.

Alexandria, June 20.

The Political Crisis.

The sudden political crisis which has arisen in the past few days took the majority of the country by surprise, although anyone who had been closely following events must have foreseen something of the sort, as it was quite obvious that King Fuad could not sign the Bill for the prosecution of Cabinet Ministers. The Wafd have now resigned and Ismail Sidky Pasha is the new Prime Minister. At the time of writing Sidky Pasha has not completed his new Cabinet.

The Premier's Plans.

It is believed here that, when he has selected his Cabinet, Sidky Pasha will have to dissolve or prorogue Parliament. The almost unanimous vote of confidence passed by both Chambers in Nahas Pasha and his colleagues shows that the Wafd Parliament is solidly behind the Wafd Cabinet and will not, therefore, work under any other. The general opinion is that, when Parliament is dissolved, Sidky Pasha may alter the electoral law. That will be a serious step, but one which, in the judgment of many observers, is most necessary to Egypt: It has become increasingly obvious, they think, that the country is not fitted for universal suffrage, and the present moment seems most propitious for the required change. It is also reported that Sidky Pasha will do away with the Senate and form one Chamber of 300 members, 100 of whom will be nominated and the rest elected on the two degree election basis. By that means, with 100 of his supporters in the nominated seats, and given a probable 70 or 80 seats by elections, he will have a working majority. If these plans materialise, there is hope for Egypt. There will be a Government and an Opposition, and the House will be composed of influential and educated persons. At the present moment it is full of Wafdist sheep, who have been put in office solely because they are Wafdists, and just do as they are told.

Sidky Pasha is one of the most important economists in the country. His opinions are sound—he is almost the only Egyptian politician who has condemned the cotton policy that has been adopted—and he is respected by the foreign element in the country.

The main difficulty about this political plan is the fact that the Wafd will fight it tooth and nail, for it spells *finis* to their party in its present state, and serious trouble may be expected in the country. The severe economic depression to which Egypt has been reduced will, however, induce many people to give their support to the new Cabinet, which, judging by its rumoured constitution, will be likely to restore commercial confidence. It is a great pity that Mohamed Mahmoud Pasha and his party are still standing aloof, for Sidky Pasha and Mahmoud Pasha together would have done an immense amount of good for Egypt.

At the present moment all is quiet. Large Wafdist demonstrations, which had been arranged for to-day, have been forbidden, and apparently the Wafd are not insisting upon their plan.

Residency in Alexandria.

The High Commissioner and the Residency staff moved down to Alexandria to-day for the summer. Yesterday Sir Percy Loraine called upon King Fuad to present Mr. H. B. Mack, the new Second Secretary at the Residency, and to pay his respects to His Majesty before leaving. Sir Percy's visit has been deliberately misread by the extreme sections of the Wafdist Press, who are busy blaming the English, in no restrained terms, for the crisis. Some of the articles which have been appearing this week testify to the necessity for a rigorous Press Law in this country, for they have been openly seditious.

It is stated in one of the French papers that the Deputy who rose in the Chamber and said that the Wafd would not stop at "crushing the highest head in Egypt to protect the Constitution" will be arrested and charged with sedition.

NEW EGYPTIAN CABINET.

The new Egyptian Cabinet, which was formed by Ismail Pasha Sidky on June 20, is composed as follows:—

Ismail Pasha Sidky	Prime Minister, Finance and Interior.
Hafez Pasha Afifi	Foreign Affairs.
Abdel Fattah Pasha Yehia ...	Justice.
Tewfik Pasha Rifiaat	War.
Tewfik Pasha Doss	Communications.
Hafez Pasha Hassan	Public Works and Agriculture.
Aly Pasha Maher	Education.
Hilmi Pasha Issa	Wakfs.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for ASSISTANT MISTRESSSHIPS for teaching English in Egyptian Government Schools.

Applicants must be between the ages of 25 and 34, and must have some teaching experience, and possess University qualifications with a Diploma in Teaching or the Higher Froebel Certificate.

The initial salary offered is £E25 a month (about £307 a year) and the appointments will be on contract for a period of five years, and renewable at the end of that time.

Full particulars and Form of Application may be obtained from the Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 5.

Two More Ordinances.

The Governor-General has had to promulgate two more Ordinances. One of them, called the "Unlawful Instigation Ordinance," provides against instigation to refusal of payment of "certain lawful dues," or taxes. The other, called the "Prevention of Intimidation Ordinance," is to provide against picketing used as a political weapon, and against the use of coercive measures against Government officials. These measures to restore order in India, it is said, have for some time been contemplated, and, if the Ordinances have not been promulgated earlier, it was with a view to give the Congressmen an opportunity to desist from the civil disobedience movement of their own accord. That, one hopes, was but a way of putting it; for a Government that could have been hoping that the Congressmen would desist from anything of their own accord, did not know with whom it had to deal. It may, of course, just have been another way of saying: "Needless to say, if the Congressmen had desisted from the civil disobedience movement of their own accord, India would never have heard of these two new Ordinances."

Sir Chimanlal Setalvad.

Sir Chimanlal Setalvad, quoting from the Secretary of State's last speech in the House of Commons, has said: "'We have invited responsible representatives of India to come and confer. What more can we do?' is an utterance of despair." He has also said: "Mr. Benn rightly disowns the creed of exploitation of India, and warns his countrymen that, if they hold to that creed, the days of British connexion with India would be numbered. It is this exploitation that prevails more or less in many departments of national life such, as the mercantile marine, insurance, banking, industries and commerce, that India wants to end. This can only be achieved by India's becoming complete mistress in her own house, and she wants, therefore, to be a Dominion with as full internal freedom and independence as Canada, Australia, and South Africa, with only such agreed safeguards as may be requisite for the transition period, and as will automatically disappear later."

What Sir Chimanlal Setalvad would have had the Secretary of State do, instead of saying what they had done, and asking what more they could do, was to make "an announcement that would clear all doubts and misunderstandings, and make plain that the Conference will meet definitely for the purpose of evolving a constitution of Dominion status for India, with necessary safeguards for the transition period."

The Federation of Indian Chambers of Commerce.

That is the cry on all sides. Thus the Committee of the Federation of Indian Chambers of Commerce and Industry, in a letter to the Viceroy, says: "It is desirable to throw greater light on what exactly this Round Table Conference is to be. If it is going to be a body where the question of framing a Constitution for Dominion status is to be decided, then it should be definitely known as early as possible, so that those who have refused at present to give their co-operation may seriously consider whether it is not worth the country's while to accept the proposal. On the other hand, if it is going to be a mere debating place where the leaders will have no more hand in framing the Constitution than stating their case before the representatives of His Majesty's Government for their favourable or unfavourable consideration, then it is equally essential that India should know her position. But from the mutual point of view of India and Great Britain it seems most desirable that the terms of reference of the Round Table Conference, its functions, and the attitude of the British Cabinet with regard to the period within which Dominion status may be established, should be clearly and unequivocally defined." That sounds very much like asking that the Constitution that the Round Table Conference was to be an instrument in framing, should be settled in advance of the Conference. It is as if they said: "The Round Table Conference begins whenever a few of us come together in India, and we want to get on quicker with the business."

Mr. M. A. Jinnah.

To Mr. M. A. Jinnah we owe another statement on the Secretary of State's speech. It was published as that; but it is much more a running commentary on Mr. Slocombe's interview with Mr. Gandhi. After quoting Mr. Gandhi's phrase, "the substance of independence," Mr. Jinnah says: "I take it that the phrase 'substance of independence' rules out independence, and that it equally rules out immediate, complete Dominion status. Else, I think, Mr. Gandhi would not have hesitated to use at least the well-known expression 'complete Dominion status.' Mr. Gandhi says he is willing to negotiate on the question of what should be the substance it should include and the form of Constitution that should be framed. So whether you accept the vague phraseology of Mr. Gandhi or the more definite phraseology, 'that the purpose and aim and object of the Conference should be to frame a Constitution so directed and so aimed as to lead India to the realisation of complete Dominion status at the earliest possible moment,' it is to my mind the same thing, and this has been clearly defined by the Viceroy's October announcement, and has since been emphasised by him in these words: 'the object of the Conference is to find a solution which will lead India to her appointed goal most rapidly and surely.' I think every thinking man knows that this is the real issue, whether you use Mr. Gandhi's words, 'the substance of independence,' or the words I would prefer, namely, 'the transfer of power from the present bureaucratic system of government to representatives of the people responsible to the Legislature."

Four Difficult Issues.

Mr. Jinnah goes on: "To achieve this at least four difficult issues have to be negotiated and settled." They are the questions of defence, the relations between the Indian States and what is now British India, but will then be a Dominion, the question of minorities, and foreign affairs. When speaking of the third question, that of the minorities, Mr. Jinnah has these very interesting words: "The question of minorities, and particularly the Hindu-Muslim question, has got to be settled either before the Conference between ourselves or at the Conference, and although the Muslims are as anxious and as keen to advance the national cause—and I believe the bulk of them without hesitation will support the demand for the realisation of Dominion status by India as rapidly as possible—yet, when we talk of responsible Government and Dominion status, we must not forget that for the first time in the history of India we are aiming at setting up a representative Government which will have power to decide by a majority vote, and minorities are naturally apprehensive of their position in this Constitution. Therefore, it is but essential that safeguards should be provided in the Constitution which will secure their willing consent, and create a feeling of real security among them."

Exploitation.

As I copied the words, "naturally apprehensive" to the end of the quotation, I had these words of Sir Chimanlal Setalvad brought to my mind. "It is this exploitation that prevails more or less in many departments of national life, such as the mercantile marine, insurance, banking, industries and commerce, that India wants to end." In the nineteenth century, and in this century, certain

Digitized by Google

Englishmen, Scotsmen, and other non-Indians built up insurance companies, banks, and other business houses in India, the Indians either not caring themselves for any such things, or, caring for them, and trying themselves to build them up, they failed. Other things being equal, such as capacity for business, trustworthiness, industriousness, power of perseverance, they had a better chance than the non-Indians of success; for their working expenses would always be less; the totals of their salary sheets would be much smaller. They failed, and they well knew twenty years ago, and would tell you privately, why they had failed. Now they behold that mercantile marine, those insurance companies and banks, etc., and they say that it is all exploitation, and in their wills, if they ever are complete masters in their own house, there will be a short shrift for a variety of successful non-Indian enterprises in India. Whether they have actually thought out what steps they will take, is doubtful. I imagine they have not. What in their hearts they are ready to proceed to, I often fear, reading what they say, is plain confiscation.

THE INDIAN STATUTORY COMMISSION.

The second volume of the Indian Statutory Commission's Report contains unanimous recommendations for a new constitutional scheme for India. In a final chapter the Commissioners point out the more important changes that they recommend. What follows, they state, must not be treated as a summary of the volume. The Report proceeds :—

The Scope of Our Proposals.

363. British India at present has a constitution, based for the most part on the Government of India Act, which includes (1) a Central Executive—the Governor-General in Council; and a Central Legislature—the Council of State and Legislative Assembly; and (2) nine Provincial Governments, each associated with a Provincial Council, and covering between them 97 per cent. of the whole area. The balance is represented by the North-West Frontier Province and other minor administrations. Our proposals touch every part of this constitution. We will venture to repeat words which we used in the first paragraph of our former volume, when we wrote that we were entering upon our task "upon the basis and assumption that the goal defined by Mr. Montagu represents the accepted policy to be pursued, and that the only proposals worthy to be considered are proposals conceived in the spirit of the announcement of August 20, 1917, and inspired with the honest purpose of giving to it its due effect." We have kept this principle steadily in mind throughout the whole of our deliberations, and our recommendations are based upon it.

Outline of Provincial Changes.

364. In the provinces, the main consequences of adopting our proposals would be as follows:—

The boundary now set up between departments of which Indian Ministers may take charge and departments from which they are excluded will be removed, and thus dyarchy will terminate.

The conduct of provincial administration as a whole will rest with a provincial Cabinet, the members of which will be chosen by the Governor. These Ministers, whether elected members of the legislature or not, will have joint responsibility for action and policy. The constitution of the provincial Cabinet will be elastic and, where and when the Governor considers it necessary, it will contain an official element.

The powers of the Governor for certain essential purposes, such as the protection of minorities, and of the civil services, will be defined, and will be exercised within the limits and under the conditions we have described.

Full powers of intervention in the event of a breakdown will remain in the hands of the Governor, subject to the direction of the Governor-General.

The Provincial Legislatures will be based upon a widened franchise—the extension we propose would treble the electorate and would include the admission of a large number of women voters.

Certain important minorities will be adequately protected by the continuance of communal electorates unless and until agreement can be reached upon a better method.

The Depressed Classes will get representation by reservation of seats.

The Legislatures will be enlarged, and the constituencies reduced to a more manageable size. The Provincial Councils, instead of being, as at present, purely legislative bodies, will acquire certain powers of recasting their own representative system, so that each province may advance to self-government on lines which are found to be best suited for its individual needs, subject always to securing that the vote of the majority should not introduce constitutional changes which would prejudice minority rights.

The provinces will be provided with enlarged financial resources.

As for provincial areas, the question whether some redistribution is desirable will at once be taken up; such cases as those of Sind and the Oriya-speaking peoples will be the first to be considered.

Burma, which is admittedly not a natural part of British India, will be separated forthwith. Provision must be made without delay for framing its future constitution.

The administered areas of the North-West Frontier Province will now receive an advance in constitutional status represented by the creation of a local legislature, with powers which we have described. Both it and Baluchistan will acquire the right to representation at the Centre.

The complicated and interlacing systems of administration of the Backward Tracts will be revised, and such parts of these as remain excluded areas will come under the charge of the central administration.

Modifications at the Centre.

365. We now pass to the Centre.

The Legislative Assembly, which should be called the "Federal Assembly," will be reconstituted on the basis of the representation of the Provinces and other areas in British India according to population. Members representing Governors' Provinces will be elected by the Provincial Councils by the method of proportional representation, which will ensure that members belonging to minority communities will be included in sufficient numbers in the Federal Assembly. Members will be returned from the North-West Frontier Province and other areas outside the Governors' Provinces by methods appropriate to each case. The official members of the Federal Assembly will consist of such members of the Governor-General's Council as sit in the Lower House, together with twelve other nominated officials.

The Council of State will continue with its existing functions as a body of elected and nominated members chosen in the same proportions as at present. Its members, who must have high qualifications, will, so far as they are elected, be chosen by indirect election carried out by provincial Second Chambers if such bodies are constituted, or, failing this, by the Provincial Councils.

The existing legislative and financial powers of the two Chambers of the Central Legislature will remain as at present, but the Federal Assembly will also have the special function of voting certain indirect taxes, collected by a central agency, the net proceeds of which will fall into a Provincial Fund for the purpose of being distributed amongst the diffierent units represented in the Federal Assembly.

The Central Executive will continue to be the Governor-General in Council, but the Governor-General will henceforward be the authority who will select and appoint his Executive Councillors. Existing qualifications will remain, but will be laid down in statutory rules made under the new Government of India Act, so that when occasion arises to modify these conditions hereafter this may be done without passing a new Act of Parliament. But any modification in the Statutory rules made for this purpose would require to be laid before both Houses of Parliament and the approval of both Houses expressed by resolution.

It is proposed that among the members of the Governor-General's Council should be one whose primary function it would be to lead the Federal Assembly. We have made other suggestions relating to the composition and character of the Governor-General's Council, and we propose that the Commander-in-Chief should no longer be a member of it, or of the Central Legislature.

The Army.

366. We have suggested for consideration a method by which, if agreement could be reached, the obstacle which the composition and functions of the Army in India present to the more rapid development of responsible government might be removed through treating the defence of India as a matter which should fall within the responsibilities of the Governor-General, advised by the Commander-in-Chief, as representing the Imperial authorities, instead of being part of the responsibilities of the Government of India in relation to the Central Legislature.

Civil Services, High Courts, India Office.

367. As regards the Civil Services of India, the Security Services must continue to be recruited as All-India Services by the Secretary of State, and their existing rights must be maintained. These Security Services include the Indian Civil Service and the Indian Police Service. It is a matter for consideration whether the Irrigation Service and the Forest Service should not be similarly recruited. The privilege of premature retirement will be extended.

The rates of Indianisation laid down by the Lee Commission for the Security Services will be maintained.

In addition to the existing Public Service Commission, we intend that there should be established by Statute similar bodies covering the provincial and subordinate services in all the Provinces.

The High Courts will be centralised, and the expenses of the High Courts will become a central charge.

As regards the India Office, the Governor-General will remain in constitutional theory under the superintendence, direction and control of the Secretary of State, and the extent to which this control is relaxed or falls into desuetude will depend upon future practice, and cannot be laid down in the Statute.

Apart from the Secretary of State's authority over the Governor-

General in Council, he will exercise no control over Provincial Governments, save in so far as he does so in connexion with the exercise of special powers vested in the Governor.

The functions and composition of the Council of India will be modified. Its size will be reduced, and the majority of its members should have the qualification of more recent Indian experience than is required at present. The Council will exist primarily as an advisory body, but independent powers will continue for (1) the control of Service conditions, and (2) the control of non-votable Indian expenditure.

Indian States.

368. Lastly, for the purpose of promoting the closer association with British India of the Indian States in matters of common concern for India as a whole, we propose that the new Act should provide that it shall be lawful for the Crown to create a Council for Greater India, containing both representatives of the States and members representing British India. This Council would have constitutional and deliberative functions in regard to a scheduled list of "matters of common concern," together with such other subjects of common concern as the Viceroy from time to time certifies as suitable for consideration by the Council. We refer to Part VIII of this volume for a more detailed account of the machinery and methods which we contemplate, and we put forward the proposals as designed to make a beginning in the process which may lead to the Federation of Greater India.

British Contribution to Indian Progress.

369. In writing this Report we have made no allusion to the events of the last few months, in India. In fact, the whole of our principal recommendations were arrived at and unanimously agreed upon before these events occurred. We have not altered a line of our Report on that account, for it is necessary to look beyond particular incidents and to take a longer view.

Our object throughout has been to bring to the notice of the British Parliament and the British people such information as we are able to supply about the general conditions of the problem which now awaits solution, together with our considered proposals. We hope, at the same time, that our Indian fellow-subjects, after doing us the courtesy of studying the Report as a whole (for isolated sentences may give to any reader a wrong impression) will find that what we have put forward has been written in a spirit of genuine sympathy.

No one of either race ought to be so foolish as to deny the greatness of the contribution which Britain has made to Indian progress. It is not racial prejudice, nor imperialistic ambition, nor commercial interest, which makes us say so plainly. It is a tremendous achievement to have brought to the Indian sub-continent and to have applied in practice the conceptions of impartial justice, of the rule of law, of respect for equal civil rights without reference to class or creed, and of a disinterested and incorruptible civil service. These are essential elements in any State which is advancing towards well-ordered self-government. In his heart, even the bitterest critic of British administration in India knows that India has owed these things mainly to Britain. But, when all this is said, it still leaves out of account the condition essential to the peaceful advance of India, and Indian statesmanship has now a great part to play. Success can only be achieved by sustained good will and co-operation, both between the great religious communities of India which have so constantly been in conflict, and between India and Britain. For the future of India depends on the collaboration of East and West, and each has much to learn from the other.

We have grown to understand something of the ideals which are inspiring the Indian national movement, and no man who has taken part in working the representative institutions of Britain can fail to sympathise with the desire of others to secure for their own land a similar development. But a constitution is something more than a generalisation; it has to present a constructive scheme. We submit our Report in the hope that it may furnish materials and suggest a plan by means of which Indian constitutional reconstruction may be peacefully and surely promoted.

THE EUROPEAN IN INDIA.

In a very brief chapter of the first volume of its Report the Simon Commission deals in an informative and adequate way with the position of the European in India. There are, it is pointed out, three classes of Europeans in the country, namely, the commercial men, the British members of the Services and employees of railways, and some 60,000 British troops and British officers holding commissions in the Indian Army. The Commission emphasises the fact that the British element in the Services is comparatively small. In the whole civil administration of India, from the highest to the lowest grade, the European element is about 12,000 out of a total approaching to a million and a half. But this 12,000 includes a large number of British engine-drivers on lines directly managed by Government, a few British police sergeants in some of the larger towns, and other Europeans in subordinate posts. In the superior grades of the Civil Service the total British element is about 3,500. In addition to these three main classes of Europeans there are the missionaries of various denominations, a few women engaged in medical and other social work, some retired officials, army officers and planters who have settled in the hill stations, and a limited number who carry on in country districts well organised agricultural production of an exceedingly high standard. The European population in India, according to the Census of 1921, numbers 156,637, of whom 45,000 were women. The adult males, not in Government service, aggregated 21,780.

"Small as these numbers are," the Commissioners go on to say, "the part that is played by British enterprise in the commercial life and organisation of India is incalculably great. In Bombay the bulk of the industrial capital is Indian, and apart from shipping and allied interests, the British element constitutes a comparatively small fraction of the whole. Most of the textile mills, for example, are Indian-owned; though some of these employ British managers or heads of departments. By contrast the control and direction of a large part of Calcutta business is in English, and still more, in Scottish hands. As a centre of overseas trade Madras is of much less importance, but here also there is a substantial element which is British. Cawnpore is a most striking example of a great industrial town in the interior with textile and leather industries which have been largely developed by British capital."

After referring to the European Association, with its 31 branches, and 8,000 members, the Commissioners remark as follows on the extent and importance of European influence in India: "The true significance," they say, "of the position of the European in India can only be realised by bearing in mind the course of history and the economic development of the country. It is now more than three hundred years since the first British merchants settled in Surat, north of Bombay, and more than two centuries have passed since British traders established themselves in Bengal. The Indian railway system, designed and carried out by British enterprise, has transformed the conditions of Indian commerce. It is British organisation and leadership which have promoted the modern industrial development of India just as it has been the adoption of political conceptions derived from Britain which has chiefly affected the recent course of Indian politics. There can be few cases in history where so small a body of men has brought about changes so widespread and so fundamental. Yet, while the British connexion is continuous and deeply rooted, the British individual is a sojourner who, after spending his working years in India, looks forward to retiring to that other country which is his real home. Only a small fraction of those who go out for the purposes of business or employment settle down in India permanently, and the domiciled European community does not grow. The noteworthy fact is that, over areas so vast and amid populations so immense and diverse, the importance of the small European community, by whatever standard this may be measured, is out of all proportion with its size."

Colonel Clifford Boardman Winter, C.M.G., D.S.O., who died suddenly at his residence in Harrington Gardens on June 6, at the age of 61, was in the Isazai campaign on the N.W. Frontier in 1892. Transferred to the Political Department in 1895, he served chiefly in Baluchistan. In 1903 he was appointed H.B.M.'s Consul at Turbat-i-Haidari, Persia. In 1912 he became D.A.Q.M.G. of the Karachi Brigade. In April, 1915, he was given the same appointment on Sir John Nixon's staff in Mesopotamia, and he remained as A.Q.M.G. until invalided in the spring of 1919.

PERSONAL AND GENERAL

TO-DAY

June 26, 1930 (New Style).
June 13, 1930 (Old Style).
Muharram 29, 1349 A.H., of the Muslim Calendar.
Sivan 30, 5690, of the Jewish Calendar.
Tir 5, 1309, of the Persian Calendar.

Sir Denys and Lady Bray have moved to 23, Cadogan Court, S.W.3, which will be their address in future.

Russell Pasha arrived in London from Egypt on June 18, and will be at 10, Wyndham House, Sloane Gardens, with Mrs. Russell until the middle of July.

Miss Cornelia Sorabji arrived last week at the Halcyon Club, 14, Cork Street, from India. She will remain in London until the end of September.

Sir Nigel Davidson, K.B.E., who has retired from the Sudan Government service after 23 years in the Sudan, during the last five of which he has been Legal Secretary, sailed from Egypt on June 16 for England.

Lord and Lady Lloyd of Dolobran will open the garden party and fête in aid of the British Empire Union, which will be held at the Rectory Gardens, Church Street, Chelsea, this afternoon (Thursday) at 2.45 p.m.

The third annual dinner of the Mesopotamian and Persian Force will be held to-morrow (June 27), at 7.30 p.m., at the Hotel Victoria, Northumberland Avenue, W.C.2. Lieut.-Gen. Sir George F. MacMunn will preside, and the principal guests of the evening will be Lord Lloyd of Dolobran and Field-Marshal Sir Claude Jacob.

Under the auspices of the Indian Society, M. Victor Golonheff will give a lecture (in English) at the Institut Français du Royaume-Uni, 3, Cromwell Gardens, S.W.7, on July 2, at 8.45 p.m., upon "Temple of Sambor Prei Kuk and their Relation to Indian Art of the Gupta Period." Sir Francis Younghusband will preside.

The Secretary for India has appointed Sir Samuel Findlater Stewart to be Permanent Under-Secretary for India, in succession to Sir Arthur Hirtzel, who is about to retire. Sir Samuel Stewart had the honour of being received by the King at Windsor Castle on June 17, when His Majesty invested him with the Insignia of a Knight Commander of the Most Eminent Order of the Indian Empire.

A dinner was given at the Savoy Hotel on June 19 by Dr. and Mrs. Robert Mond to celebrate the completion of 50 years' research work by Sir Flinders Petrie, the Egyptologist. In addition to Sir Flinders and Lady Petrie the guests included: Field-Marshal Viscount Allenby and Viscountess Allenby, Lord and Lady Melchett, Prince and Princess Wiasemsky, the Bishop of Gloucester, Sir Henry Birchenough, Lady Burghclere, Sir Charles Close, Lady Evans, Sir James and Lady Fraser, Sir Richard Gregory, Sir Charles and Lady Marston, Sir Frank and Lady Newnes, Sir Denison and Lady Ross, Sir Andrew Taylor, Sir Herbert Samuel, Sir Robert and Lady Witt, Mr. H. G. Wells, Mr. Howard Carter, Dean Inge, Professor Stephen Langdon, the Hon. Henry and Mrs. Mond, Professor F. Ll. Griffith, Mr. and Mrs. Sigismund Goetze, the Rev. C. B. Mortlock, Professor Peet, Dr. Seligman, Mr. Sigmund Samuel, Mr. and Mrs. Leonard Woolley, Mr. and Mrs. Emile Mond, the Principal of King's College, Major H. and Mrs. Brackley, Mrs. Irene Austin, M. Jean Capart, Mr. and Mrs. N. de G. Davies, Mr. Philip de Laszlo, Professor and Miss Donnan, Dr. Hamed Mahmoud, Mr. Robert Mathias, and Mlle. le Manach.

The title of Lord Noel-Buxton has been taken by Mr. N. E. Noel-Buxton, whose elevation to the peerage appeared in the recent Birthday Honours.

ETCHINGS OF THE EAST.

The works of Mr. Charles W. Cain, who is now exhibiting etchings of India, Burma, and Mesopotamia at the Greatorex Galleries, Grafton Street, Bond Street, W.1. (until July 5) are familiar to readers of THE NEAR EAST AND INDIA, which has consistently praised the art of this young Englishman. In the present exhibition, admirers of his work will be pleased to renew acquaintance with several favoured works—particularly those dealing with Mesopotamia and Burma—but there is also a most interesting leaven of new etchings.

Of these, one would pick out first—mainly because it is a new *genre* for Mr. Cain—some remarkable decorative representations of elephants, Buddhas, fish, and so on. The technical skill of these is uncanny: so slick an appearance to ivory and elephant hide would, one might have thought, be almost impossible in such a difficult medium. It is, in essence, a new field for Mr. Cain, triumphantly entered, and one in which we wish him all success. Artifice such as this deserves abundant reward.

Then comes what is certainly his finest detailed work so far: "A Persian Bazaar." This etching, which was in the Royal Academy this year, is perfectly composed, containing I know not how many complete figures. Imagination has been mated in it to a beautiful sense of form and of atmosphere, so that the Persian must say: "That is what it looks like," and the non-Persian, "That is what it must look like." In other words, it is both realistically and artistically satisfying. Another new work, which portrays yet again that command of mysterious repose which is a characteristic of Mr. Cain's art, is "A Closed Door." Nor will the visitor be slow to seize on such works as "Wedding Guests," "The Beggar," or "The Letter Writer," as fresh indications of the artist's eloquence on his favourite theme.

It would be wrong, however, so to identify Mr. Cain with the East as to suggest that he is not at home away from it. It is a common-place that he is the most accomplished etcher who has ever been to Mesopotamia; it ought to be equally well-known that he is one of the most accomplished etchers in our younger generation. To attempt to tie him to the East does a service neither to himself nor to British art. Maurice Hewlett, it may be remembered, was writing epics of the English soil when the public which knew only his early works, wanted him to keep on writing medieval romances But the wind bloweth where it listeth. K. W.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

Bans and Banners.

The fight between Lord Beaverbrook and Mr. Baldwin is approaching a head. It was never thought, except by the obtuse or the hopelessly optimistic, that the device of the Referendum, which was dragged in to patch up a truce between the Empire Crusaders and the official Conservatives, would really work. But over one thing there has been considerable miscalculation. For it was freely asserted, last spring, that Lord Beaverbrook was only too glad to have hit upon the the Referendum as a means of retreat from a very difficult position. The event has completely belied this reading. For so far from retreating, Lord Beaverbrook is all for advance. He has even, during the last few days, appealed again for funds with which to fight his enemies, including, most notably, those Conservatives who are not "sound" upon the question of Empire Free Trade. This appeal, which is in effect a direct menace to the Conservative Party Funds, has been the last straw to the Conservatives, who are holding a meeting to-day for the express purpose of confirming Mr. Baldwin in the leadership of the Party. That he will be so confirmed goes, I think, without saying. But what will it signify?

Very little, probably. For Lord Beaverbrook, who under the banner of Empire Free Trade has irrevocably banned all those who will not keep step with him, is appealing—with a success which, if undefinable, is at any rate considerable—over the heads of official members of the Conservative Party to the rank and file in the country. His fight for food taxes is undeniably making progress in agricultural districts, and if the North Norfolk by-election is won by the Conservatives, it will be claimed as a victory for Lord Beaverbrook. But will the industrial districts ever stand for the protection of agriculture? It seems doubtful. That is what Conservative headquarters are thinking of.

The one thing certain at the moment is that the Conservative Party is no longer a happy family. To the outsider its two most pronounced characteristics are recklessness and reticence—Lord Beaverbrook shouting "On," and Mr. Baldwin saying "Be careful"—an impossible combination. The other two Parties ought, indeed, to consider themselves very fortunate at the discomfiture of their chief enemy.

Politics and Economics.

Get Mr. Winston Churchill out of Parliament (and, particularly, away from the sight of Mr. Snowden), and he nearly always says something worth considering. At the Romanes Lecture at Oxford the other day, for instance, he made the most interesting suggestion (not entirely original, because Germany did something of the sort ten years ago) that, for the purpose of discussing the paramount problem of to-day, which was economics, not politics, Parliament should create a "non-political body, free altogether from party exigencies and composed of persons possessing special qualifications in economic matters." Such an economic sub-Parliament, which might be chosen, in proportion to the party groupings, of one-fifth of the members, could, Mr. Churchill thinks, easily be embraced by our constitutional system.

There is certainly no doubt that Parliament does need expert advice on economic matters, on which it nearly always is at its worst. Too often Parliament treats these matters in a childish or in a perfunctory way, so that the old idea of parliamentary control over expenditure has little enough basis in reality. But would the party passions of men actually disappear in such an economic sub-Parliament? Would men consent to have responsibility without power, that is, to serve on a body with no legislative powers? And how could economists and business men give up their time to the nation when the time of most men is taken up in earning a livelihood?

Mr. Churchill's scheme is most admirable in theory; he has certainly touched on one of the weakest points of our governance and direction. But it seems extremely doubtful whether it would succeed in practice.

Caught at Ascot.

This year will be memorable for many things, but for nothing more than the ruining by storm of the long skirt at Ascot. Everyone has read, seen, and heard, of the unhappy women caught last week in the rains of Ascot, and the wisest and most superstitious will have seen in the destruction of the exquisitely absurd draperies in which the most *chic* women wrapped themselves the righteous anger of Jove.

But do you imagine that such an event as the mere ruining of dresses and hats, the loss of shoes and tempers, the bogging of cavaliers and cars, will upset a fashion? If you do, you evidently are very foolish. Or perhaps you are very wise. For at any rate you know nothing of women.

A London Concert Hall.

Those who are old enough to remember the loss of St. James's Hall, where the Joachim Quartet used to play, and even those who have only heard of it, will be genuinely alarmed at the prospect of London's losing the Æolian Hall for music. But, as was stated in a letter to *The Times* last week, signed by some of our most eminent composers and executive artists (chiefly, of course, singers and performers of chamber music), this beautiful Hall is to be sold by auction on June 30.

It would be really appalling if this Hall were lost for music. It has—and I must have heard hundreds of concerts in it—only two disadvantages: its seats are not commodious enough, and occasionally the sound of a motor-horn is wafted through the inner wall. Otherwise it is perfect for its purpose of recitals and chamber music. "If ever I were a rich man," as Belloc nearly said, I would certainly buy the Æolian Hall. For there is none like it—except the Wigmore.

The Test at Lords.

Although England won the first Test Match at Nottingham, after a tremendous struggle in which ill-fortune dealt malicious blows to either side, nobody appears to be very confident that Australia will be made to bite the historic dust at Lords, where the second match begins on Friday. It is thought—poor pessimists that we are—that our team will not improve very much, that our best has been shown, whereas the Australians are steadily getting better and working up to a grand climax. There are optimistic writers among us, but, like so many optimists, they are jejune to a degree, and cannot possibly carry conviction to the man who understands either writing or cricket.

It would, of course, be foolish to write on the prospects of this next match without knowing our team, but it is almost incredible that our middle batting will fail again as it did in our first innings at Nottingham. With the exception of Hobbs (whose pre-eminence among batsmen in the world is surely now beyond dispute) everyone in the English eleven can improve on his batting. And if Geary plays, our bowling should be adequate. Certainly our fielding will not let us down. On the whole, I think that what historians call the theory of "contingency" will decide this match.

ALTER EGO.

AVIATION IN ASIA.

The Anniversary Meeting of the Central Asian Society was held at the Royal Society's Hall on June 11. Field-Marshal Lord Allenby presided. The Hon. Secretary's report for the year disclosed the interesting fact that the Society, which but a few years ago had only 400 members, now boasted 1,300 members. He further commented on the excellence of the Society's *Journal*.

Certain changes in personnel were made. Lord Allenby became President, *vice* Lord Peel, who was made a Vice-President. Mr. G. Stephenson, leaving the Council, became a Vice-President. In place of Miss Ella Sykes, resigned, General Sir Raleigh Egerton became Hon. Librarian. Colonel F. M. Bailey and Colonel J. A. Tod were elected to the Council in place of Sir Charles Marling, resigned, and Mr. G. Stephenson; and Dr. Gray and Mr. G. W. Hunter were elected honorary members of the Society.

In his review of the year the Chairman referred to the importance of the Indian problem, and remarked that history had no excuse for those that let things slide.

Lord Thomson, Secretary of State for Air, then spoke on "Aviation in Asia." He pointed out that British aviation was non-existent in Central Asia, being confined to the fringes, the northern frontier of India, and to Arabia. While Imperial Airways had a regular weekly service to India, the Royal Air Force played an important part in both regions. As an instance of its activities in Asia, the distribution of one squadron just before the evacuation of Europeans from Kabul might be quoted. Of ten Victoria troop carriers stationed at Hinaidi, near Baghdad, on that day, two were at Aleppo with the High Commissioner for Iraq, two were at Risalpur on the North-West Frontier, three were on their way to that frontier by way of the Persian Gulf, and three were at their base. For the relief of Europeans in Kabul, seven similar machines were flown from Baghdad to Peshawar, a distance of 2,500 miles, and assisted in evacuating 586 people without a mishap to a single passenger. Air services already being operated between Europe and Asia were the British air mail to India and the French service to Beyrout. Dutch, French and German lines contemplated services to Baghdad. In Persia the Junkers firm had played a leading part in the development of civil aviation, and four air routes radiated from Teheran to Pahlevi, Meshed, through Shiraz to Bushire, and through Hamadan to Baghdad. The efficiency of the Junkers firm was beyond all praise, and the enterprise of the Persian people in taking to the air most noteworthy.

Russia formed a link between Europe and Asia. There was a service every week-day from London through Berlin, Moscow, and Sochi, on the Black Sea, to Baku, thence weekly to Teheran, and from there twice weekly to Bushire, a journey occupying 61 hr. 50 min. actual flying time. Russia now had aviation centres at Tashkent, Samarkand, Termez, Kabul, Lake Aral, Khiva, Charjui, Semipalatinsk, Sergiopol, and Alma-Ata. The most important link was that between Moscow and Tashkent, which would give Russia access by air to the whole northern frontier of Afghanistan and to Mongolia and Sinkiang. The line from Tashkent to Kabul was to be operated once a week throughout the year. Three new air lines had been added to the Russian network this summer, and had increased the total length of airways from 7,438 miles to 11,445 miles. One of the lines, running over the Caucasus Mountains to Baku *via* Tiflis, completed the former air connexion between Vladikavkaz and Baku. The two others ran through Siberia, one, from Moscow to Irkutsk, being the first step towards establishing services to Japan and China, the other connesting Semipalatinsk, in South Siberia, with Alma-Ata, in the Soviet Republic of Central Asia. New lines planned for the next three years would raise the total length of airways to 25,955 miles. The great thing about Russian aviation was that it was regarded as a colonising, civilising influence.

The Russians had made considerable strides in aircraft and aero engine construction in recent years, mostly following the German model. Many types of purely Russian design had already been produced. Germany was largely interested in Russian developments, and if friendly relations could be established with Russia it was possible that a joint arrangement would be made for the operation of the route from Moscow to Irkutsk, Urga, Peking, Nanking, and Shanghai. France was planning to fly in co-operation with the British and the Dutch to Rangoon and thence to Bangkok and Saigon, and also to Hanoi and on to Canton. Chinese lines were being worked between Nanking and Shanghai, and also between Hankow and Shanghai, with the assistance of an American company. A line from Canton through Hankow to Peking was planned. Japan had started one line from Tokyo through Osaka to Dairen, in Manchuria, but the results so far were disappointing.

Great Britain, said Lord Thomson, was doing practically nothing in Asia, and he would like to see a great deal more activity on her part. The British could produce the finest engines in the world, but they had to compete with a large number of rivals. The only solution was to produce machines more cheaply, by means of mass production. Undoubtedly the air was now our chief line of defence, and the development of British aviation would not only revive the old Empire spirit (which might be drooping) by bringing the scattered parts of the Empire closer together, but it should also be possible to develop in this country a great air-transport industry feeding a vast air-transport system. Instead of the few thousands of men now employed in the manufacture of aeroplanes, he could foresee the time when hundreds of thousands would gain their livelihood in this industry.

THE CENTRAL ASIAN SOCIETY.

The next two lectures arranged by the Central Asian Society deal with India. The first, which is not open to non-members, is to be held at 74, Grosvenor Street, W.1. Mr. Srinavasa Sastri will speak on "The Constitution for India." At the second, which will be given in the Royal Society's Hall, Burlington House, W., Sir Reginald Craddock will speak on "The Indian Reforms and Asia." These lectures will take place on July 2, 5.30 p.m., and on July 16, 5 p.m., respectively.

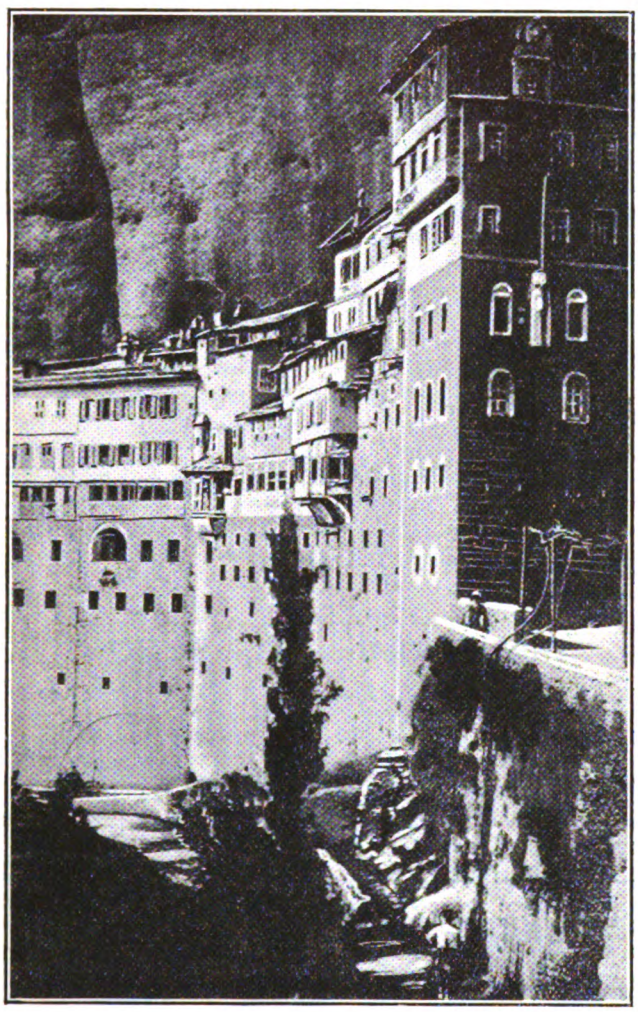
THE PELOPONNESE.

A Tourist Centre in Greece.

BY X. L. MESSINESI.

There are many countries which can be divided in our thoughts into two definite divisions, the capital, and the rest of the land. When it was decided to make Athens the capital, Greece bestowed upon that town the ultimate predominating position in Hellenic economic and social life, a position that had been acquired for Athens in the realm of art by her sons of old.

The tourist to Greece will probably always look to Athens as a place to make his headquarters, especially in these days when flying is entering into the sphere of practical travel, and Athens will thus once more resume her position as a centre of trade routes, the position that she enjoyed in classic times. The growing importance of Salonika as a port will tend only to enhance its importance as a halting place on the route between western and northern Europe on the one hand and India and the East on the other, for Salonika forms a natural stepping-stone on this route.



THE MONASTERY OF MEGASPELAION.

Greece, however, has a wider field for the tourist of outstanding importance. The Peloponnese seems to concentrate many of her main attractions within its somewhat limited confines. This is contrary to what we might have expected, for the Gods of old showed some disdain for this land. The Father of the Gods held his court on Mount Olympus, and Eros too, who apparently even in those times was too powerful a deity to subjugate himself to the Patriarchial Zeus, held his separate abode on the northern shores of the Corinthian Gulf on lofty Parnassus. Even the Muses dwelt on Mount Cithaeron, close to Thebes and to the Attic plain.

It was also to the north of the Gulf of Corinth that the devout came to commune with their deities. The Athenians, and later the other Hellenes, learned of the mysteries of life and death at their initiation to the Demetrian rites of Eleusis, and the then civilised world put no such trust in its own oracles as it did in that of far-famed Dodona, and in the Pythian utterances of the Delphic Apollo.

In the Peloponnese, however, we can see the most traces of the past, where man made continuous history for many thousands of years. It was to Olympia that Hellenes flocked to vie with each other in prowess at the athletic contests; Corinth attained a leading position in the opulence of commercial enterprise and trade, and Epidaurus acquired most repute in the care of man's physical ailments. Sparta became a model to mankind of valour and rigorous State discipline. It was to the Peloponnese, too, that Zeus assigned his arsenal to cope with mankind, for he kept his store of thunderbolts on the Panachaic range behind the town of Aegion, now better known by the name of Vostizza.

The student of pre-Homeric and Homeric Greece will be attracted by such towns as Mycenae, Tiryns, and Argos, and will not fail to visit Tegea, Mantinea, and Nemea. Those who have a liking for poetic phantasy will wish to visit the vales of Arcady.

The tourist will find in the Peloponnese all that he has been taught to expect in the nature of classical remains, but he will be agreeably surprised to find that it is all set in an atmosphere of beauty and grandeur; a countryside that changes completely in aspect at every turn, though always bathed in the delicate irridescent hues that are the outstanding charms of the country. What will astonish him most, however, is that he will find much of extreme interest and beauty in the ruins of later ages. Byzantium has many traces of her mighty past to show; in fact, there are many who aver that the ruins of Byzantine Mistra, close to Sparta, is the most attractive of the sights that Greece has to show. During the Middle Ages the Frankish and Venetian Crusaders covered the country with their feudal strongholds and castles, one of which in particular is of peculiar interest to Englishmen, for on the site of ancient Cyllene stands a castle surmounting a steep hill, around which in mediaeval times sprang the prosperous and mighty town of Clarentza. This fief came through inheritance into the possession of the British Crown, and gave the title of Duke of Clarence, borne more than once by members of the British Royal Family.

Finally, it was in the Peloponnese that the Greeks managed to raise the standard of revolt against the Turkish overlord, and it was there too that the naval battle of Navarino was fought and independence obtained.

Since Greece obtained her freedom the Peloponnese was the mainstay of her economic life, for the cultivation of the currant vine formed for many years the large proportion of her national income. To-day the currant industry is still a factor of considerable significance to Greece's annual income, for it is responsible for the livelihood of some half a million people, the currant vineyards occupying a strip of land on the northern and western shores of the Peloponnese some 200 miles in length. To-day one can see in this land, which has been the scene of so much strife and struggle, an industrious population of smallholders grouped into a cartel organised on a basis of rationalisation, which is probably the most developed in the world.

The tourist will, therefore, find that in visiting the Peloponnese he is not merely going to a vast outdoor museum, but to a land of diversified attractions, and to scenery of unparalleled serene beauty.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Egypt's Cotton Policy.

The change of Government in Egypt will naturally mean that the cotton policy which has been pursued in recent months will be carefully reviewed, but it is not likely that any new step will be taken until Professor Todd has had time to go into the whole cotton position and has presented his report. As illustrating the point I made last week that the cotton policy is not meeting with general acceptance, I would instance a letter recently addressed by Prince Omar Toussoun to the late Minister of Finance in which he points out that the prices of Egyptian cotton are bound up with those of American, and that, while the acreage was restricted last year and large purchases were made by the Government, yet prices did not improve as was anticipated. The new cotton, he remarks has come on to the market and is rising and falling as usual in accordance with the prices of American. He anticipates a decline in prices from year to year except in the event of a disaster to the American crop, and he expresses what most people will regard as an eminently sound view that it is better for the fellah that 10,000,000 kantars should be sold at £E5 per kantar than that 6,000,000 kantars should be sold at £E8 per kantar. In other words, he advocates production and no artificial interference with prices.

The "Shell" Meeting.

At the meeting of the "Shell" Transport and Trading Company, Lord Bearsted was able to give a most satisfactory account of the past year's operations. The net profit at £6,720,991 shows an increase of £1,036,485 on the previous year, and the dividend has been maintained at 25 per cent. free of tax on a larger capital. Lord Bearsted dealt in detail with the question of production. He pointed out the world output was not less than 210,000,000 tons as against 187,600,000 tons for 1928, and emphasised the point that it is the United States and Venezuela that must be looked to for an improvement in the position. He is hopeful that the movement for co-operation in conserving supplies will be successful. Commenting on the year's developments, Lord Bearsted remarked that the world markets for primary petroleum products showed little change as compared with the previous year. He referred to the severe competition encountered, the result of which has been that prices in some parts were forced to an uneconomic level. The figures he gave with regard to the incidence of taxation show very plainly the burden which the present level of national expenditure imposes on the industries of the country. The Government taxes paid by the group last year amounted to almost double the amount of the dividends distributed and was almost equal to the amount paid in wages and salaries.

Cyprus Asbestos.

The production of the Cyprus Asbestos Company for 1929 amounted to 14,110 tons of asbestos fibre as against 16,287 tons for the previous year, and the net profit amounted to £45,000 as compared with £61,037. Again no dividend is to be paid, £50,000 being placed to the reserve bringing it up to £100,000, the carry forward being £38,827 as against £43,724. With a view to the reduction of working costs additional expenditure has been incurred on development work, and the production capacity on the present low recovery yield has been raised to about 20,000 tons per annum. It is pointed out that any increase in recovery yield, as the quarries become more developed, will increase the output without additional cost. Unless world market conditions improve it is anticipated that the output will have to be restricted during the current year, but as there appears to be an indication of an increasing demand for asbestos it is hoped that it will not be necessary to continue restriction after 1930.

Conditions in Turkey.

At the meeting of the Ottoman Bank, the Chairman, Sir Herbert Lawrence, gave a comprehensive review of developments in Turkey during the past year. He pointed out that while a number of the crops were better than in 1928 the important nut crop was a failure, representing a loss to the export trade of a million pounds. The export trade was affected by two other factors, the depression in prices and the increased competition experienced by Turkish products in the world markets. He instanced in this connexion Greece and Bulgaria as regards tobacco, California and Australia as regards fruit, America and South Africa as regards mohair and Greece as regards carpets. The result of these various conditions was a fall in the value of Turkey's exports to £T155 millions. Turkey, it is interesting to note, is endeavouring to meet the competition in the only sound way in which it can be countered, namely, by the improvement of the quality of its products. The decline in exports, the large increase in imports, and increased Budget liabilities, brought about at the end of the year a depreciation of the exchange. Sir Herbert Lawrence commented on the prompt measures taken by the Turkish Government to meet the situation, such as the limitation of exchange operations and economy. The problem now is to effect a permanent stabilisation of the exchange and Budget equilibrium, and Sir Herbert Lawrence expressed satisfaction at the investigation of the Turkish position by M. Rist, whose advice, he pointed out, has been responsible in a large measure for the monetary restoration of Europe.

COMMENTATOR.

THE IDEAL HOLIDAYS EXHIBITION.

It would be difficult to imagine a more fitting time for the Ideal Holidays Exhibition, which was opened on June 20, at the Agricultural Hall by Princess Marie Louise, and continues until July 3. This is the period when everyone in the City is beginning to think of holidays, and Wimbledon, the second Test Match at Lords, etc., all combine to give an atmosphere of relaxation. At the exhibition those who have still not made up their minds where to go—and if the truth be told the majority of people are usually in that predicament—will find plenty of suggestions for delightful holidays ranging from sea voyages and visits to the leading resorts on the Continent to more modest tours at home. A stand likely to attract particular attention is that dealing with Greece, where, in addition to a collection of interesting photographs, exhibits are shown of various industries such as pottery, carpets and cigarettes. The Sparta carpets admirably reflect the craftsmanship of this important Greek industry. Not far away is the stand of the Palestine Railways, showing a number of interesting photographs illustrating the facilities offered by this line. British and foreign shipping companies are well represented at the exhibition. The Cunard Line shows a model of the Aquitania with pictures and photographs, while a real gondola similar to those seen on the Venetian canals is on view at the stand of the Consulich Line, the Lloyd Triestino Line, the Adria Line, the San Marco Line, and the Puglia Line, where are also to be seen models of the large Italian motor liners. Of the other stands in this very entertaining exhibition mention may be made of those of the Egyptian Produce and Industries Ltd., showing ladies handbags, wallets, slippers, etc., and Feans Ltd., whose exhibits include a head rest and a seat cushion.

The Greek Government is understood to have approved a scheme for an electricity supply system for the town and district of Salonika.

The Egyptian State Railways have given a contract to J. Stone and Co., London, for white metal.

The countries participating in the fourth World's Poultry Congress, which is to be held at the Crystal Palace from July 22 to 30, include Bulgaria, Cyprus, Egypt, Greece, India, Palestine, Roumania, Turkey, and Yugoslavia.

The Bulgarian Ministry of Agriculture is to create an Institute for the development of exports of home-grown agricultural produce including fruit and vegetables to be controlled by the Minister of Agriculture, who will be assisted by experts from the various branches of trade.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 24.

The past week opened badly in the Stock Markets, forced liquidation coupled with a further slump in Wall Street serving to depress prices in nearly all sections. This state of affairs continued for two or three days, but towards the end of the week there was a distinct improvement in the tone, which can be traced to the recovery in the prices of commodities, not only of those in which the speculative markets are directly interested, such as copper, tin and rubber, but also of staple commodities, such as wheat, wool, etc. It is now more generally realised, of course, that the depression in security values is not unconnected with the prolonged fall in commodity prices and world trade depression, and any recovery in commodity prices is naturally regarded as a first indication of a turn in the tide.

Some disappointment was caused by the fall in the price of the new Reparation Loan, which, although substantially oversubscribed, fell to a discount as soon as "inside" support was withdrawn.

Wall Street Collapse.

The New York Stock Market staged another of its spectacular collapses last week, although the tone improved before the close. Some measure of the decline is indicated by the fall in the index of 50 active industrial stocks of about 10 per cent. within a week, but, of course, many popular speculative counters suffered far more severely than this. The chief cause of the selling wave, as of others in recent weeks, was apparently the increasing appreciation of the American public that American industry cannot escape the world-wide economic depression. This realisation comes harder by reason of the official policy of Coueism which throughout the last quarter of 1929 and the first three months of this year endeavoured to cloak disagreeable symptoms and to prove that American industry was immune from the "downs" of life, and had only the "ups" to enjoy. Unemployment, however, cannot be concealed when it is widespread, and the public is now the less inclined to believe encouraging reports, even when they are justified, for having been misled before. Last week's collapse was actually precipitated by the passing of the Tariff Bill which is naturally disliked by those who do not benefit from the Protection granted. Whether or not the stock markets have touched bottom remains to be seen, but the unpalatable truths that immediate recovery is not in view, that improvement will depend on harvests, and that if these are bountiful worse troubles for American industry than those yet experienced lie ahead, must be faced. American psychology being what it is, temporary rises may be seen, but without more favourable fundamental conditions these must prove short-lived.

Accessory Makers' Deal.

With the continuance of the depression in many branches of British industry and it resultant adverse effects on the profits of by no means a few firms, the prosperity enjoyed by leading motor accessory manufacturers is rendered all the more noticeable. There concerns have carefully avoided destructive competition on the scale that has been witnessed in the motor industry, and this, coupled with the fact that they have drawn full benefit from the growth in the popularity of the motor car, has enabled them to achieve their present strong position. This desire for co-operation and smooth working in the trade is well exemplified by the agreement recently announced between Joseph Lucas Ltd., and S. Smith and Sons (Motor Accessories) Ltd., two of the leading concerns of their kind. The latter has announced that it has sold to the former the electric lighting and starting and magneto section of its business. By this change it is expected that both companies will be enabled to concentrate their

Digitized by Google

efforts on those lines in which they have specialised for many years. Without involving any question of amalgamation, a further step is being considered whereby the servicing of the numerous products manufactured by Smith's will be extended to the numerous depots and service stations owned by Lucas throughout the country. These concerns should derive considerable benefits from such agreements as these which in turn should be passed on to the shareholders. For this reason such shares as Joseph Lucas £1 Ordinary shares, yielding about £6 9s. per cent., and S. Smith and Sons 7½ per cent. Cumulative Preference shares, which yield about £7 10s. per cent., have added attractions.

Rand Dividend Features.

Taken as a whole the June dividend announcements of the Witwatersrand Gold Mining companies make a very satisfactory showing. Among the leading concerns the Geduld Proprietory is paying 3s. 3d. per share as against 3s. for the first half of 1929, and the Langlaagte Estate 2s. in place of 1s. 6d. for several preceding half-years, while Crown Mines, Sub Nigel, Springs and several other leading producers repeat their distributions of twelve months back. There is also the feature of increased dividends to be distributed by sundry mines whose period of operations is becoming short. Among these is the Geldenhuis Deep, which is paying 9d. against 6d., the Witwatersrand Gold whose 1s. interim dividend compares with 6d. for the whole of 1929, and the Rose Deep which returns to the list with a distribution of 6d. after eighteen months' absence. On the other hand, the Brakpan disbursement is only 4s. 3d., as compared with 4s. 9d. for the first and 5s. for the second half of 1929, while the 3s. rate of the Van Ryn Deep shows a further contraction of 6d. In both cases the changes reflect shrinkage in profits due to less favourable developments. References to the merits of Kaffirs in these times of depressed trade have repeatedly appeared in the Press since the New Year, but so far the public has evinced few signs of interest. More ominous, perhaps, even the substantial speculating class have failed to come into the market, possibly anticipating the mixed showing of these dividend announcements. The high returns obtainable on many of the South African mining shares, even after the necessary allowance is made for amortisation, are undeniably attractive, but the shares must be regarded as of a speculative nature.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at April 30, 1930, published in conformity with Article 8 of the Statutes:—Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,925,000; Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,413,750; current, deposit, and other accounts, £E14,485,804; Egyptian Government, £E12,807,668; Sudan Government, £E133,741; Mixed Tribunals, £E2,149,962; bankers' accounts, £E391,914; cheques and bills payable, £E220,531; sundry other accounts, £E1,668,153—£E37,659,023. Assets: Government securities and securities guaranteed by the Egyptian Government, £E19,562,188; sundry securities, £E906,284; advances on merchandise, £E2,518,048; advances on securities, £E4,152,347; advances otherwise secured, £E1,631,902; sundry other advances, £E1,519,113; bills of exchange, £E1,785,785; local bills discounted, £E667,468; buildings and furniture, £E196,727; money at call and at short notice, £E1,209,000; bankers' accounts, £E246,785; sundrey other accounts, £E1,095,216. Cash: Notes, £E1,321,968; gold, £E512,566; silver, nickel, etc., £E333,626—£E2,168,160—£E37,659,032. Issue Department.—Notes issued, £E26,500,000—£E26,500,000. Gold, £E3,339,570; *British Treasury Bills, £E9,910,430—£E13,250,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills and British War Loan, £E11,750,000—£E13,250,000—£E26,500,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

The India Stores Department have given a contract to Morris Motors, Ltd., for 236 bodies for 30 cwt. Morris six-wheeler lorries.

FERTILIZERS

TIME and Science have provided many remarkable changes from the primitive ways of the ancients to the organised methods of modern farming.

In the provision of fertilizers, supported by scientific research and a free advisory service, Imperial Chemical Industries Limited are helping to produce bigger and more profitable crops in every part of the Empire.

Enquiries may be made to:—

IMPERIAL CHEMICAL INDUSTRIES LIMITED

IMPERIAL CHEMICAL HOUSE, LONDON, S.W.1

A booklet N.E.I.9. entitled "The Products of Imperial Chemical Industries Ltd." will be sent, post free, on application to the Publicity Department.

NEAR EAST MARKET REPORTS.

The following cabled reports have been issued by Barclays Bank (Dominion, Colonial, and Overseas):—

Egypt.

Alexandria, June 16.

General trade conditions have been stagnant. Distribution has been slow and prices of almost all commodities have declined gradually.

The depression in the cotton market has continued and quotations for new crop months have fallen to the lowest levels recorded this season; November Sakels contracts are now standing at 23.09 dollars and October Ashmouni at 16.09 dollars. Owing to the absence of any signs of trade revival most business houses appear to have abandoned hope at present of a normal outlet for their cotton and all available stocks are being tendered to the Government. The first tenders for June amounted to 533,000 kantars, which constitutes a record for any single tender. The Government now hold nearly 2,750,000 kantars, or almost half of a normal Egyptian crop. The new crop has been progressing satisfactorily, with sufficient water and favourable climatic conditions. A few attacks from leaf-worm have been effectively dealt with and little or no danger from locusts has been reported. Arrivals from September 1, 1929, to date are 8,377,942 kantars, compared with 7,946,874 kantars for the corresponding period last season, while exports are 5,662,543 kantars, against 6,716,554 kantars. Stocks are 3,879,622 kantars, against 2,383,549 kantars a year ago.

The Sudan.

Khartoum, June 13.

Conditions generally are dull and not much improvement is expected until after the rains. Gum arrivals have been large and high for the time of year, but overseas demand is holding back in the hope of a fall in prices. The latest quotations c.i.f. U.K. are £68 per ton, but the tendency is downwards, as consumption is low. Prices for the new coffee crop are expected to rule lower than last year.

Palestine.

Jerusalem, June 11.

Forward sales of oranges have started and prices range between 5s. and 5s. 6d. per case on the tree, compared with 6s. and 7s. for the same period last year. The decrease is said to be due to large losses incurred last season, causing traders to be very reserved in their offers.

BRITISH INDUSTRIES FAIR.

The Department of Overseas Trade announces that the British Industries Fair, 1931, will open in London and Birmingham as usual on the third Monday in February (the 16th) and will close on Friday, February 27. In a letter to manufacturers, the Comptroller-General, Department of Overseas Trade, Sir Edward Crowe, writes:—"The London Section of the Fair, which, as you are no doubt aware, is organised by this Department, will again be held at Olympia, where all the buildings, including the whole of the Empire Hall, will be available for the first time. His Majesty's Government have again made a grant of £25,000 for advertising the Fair, and the services of the Trade Commissioners, the Commercial Diplomatic Officers, and the Consular Service will be available for making the Fair known to trade buyers in all parts of the world. In view of the success of the last Fair, it is anticipated that all the available space will be taken up at an early date, and consequently no guarantee can be given that space will be available in respect of applications received later than July 31, 1930."

By the addition of two floors of the Empire Hall, Olympia, which were not available last February, the exhibiting area of the buildings is increased by 50,000 square feet to a total of 300,000 square feet. Following a recommendation by the exhibitors' advisory committee, it is announced in the official regulations that the Fair in London will open and close half an hour earlier than in previous years.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*First class passengers only. Specially low fares. †Calls Port Sudan.
‡ First Class and Third Cabin passengers. §Leaves Marseilles Oct. 1.

SPECIAL NOTICE. New T.S.S. CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Sewage Ejectors, etc.—The Egyptian Ministry of Public Works invites tenders for the supply and delivery of two duplicate pneumatic sewage ejectors, 2-100 gallons liquid capacity each, to work by compressed air at a pressure of 25 lb. per square inch for one to be delivered at El Arish and 25 lb. per square inch for one to be delivered at Mankabad, together with accessories and spare parts. October 24. (D.O.T.)

Surgical Instruments, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of surgical instruments, sundries, and appliances required for the year 1930-1931. August 26.

Steam Roller.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of a 15-ton steam roller to be run with coal. August 5.

Surgical Instruments.—The Egyptian Department of Public Health invites tenders for the supply of surgical instruments, etc., sundries, and appliances during the period from May 1, 1930, to April 30, 1931. August 26. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Glasgow, June 30; Manchester, July 5; Birkenhead, July 11); s.s. Tarantia for Bombay (Glasgow, July 16; Manchester, July 24; Birkenhead, August 2). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, July 3); s.s. Malakand for Calcutta (Birkenhead, July 10).

Bibby Line.—S.s. Oxfordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 9).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, June 28); s.s. Burdwan for Bombay, Port Okha, and/or Bedi Bunder (Jamnagar), and Karachi (London, July 18).

Cunard Line.—S.s. Bantria, closing in Glasgow July 19 for Casablanca, Gibraltar, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement. Closing in Liverpool July 19 and in Swansea July 22 for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducement; s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow, July 31; Liverpool and Swansea, August 2).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17).

P. and O. Line.—S.s. Perim for Calcutta (London, July 4); s.s. Kaisar-i-Hind for Bombay (London, July 4).

Prince Line.—S.s. African Prince for Malta, Alexandria, Jaffa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, July 2); s.s. Corsican Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, July 5).

Ellerman and Papayanni Line.—S.s. Manchurian for Gibraltar*, Algiers,*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 5; Swansea*, July 5); s.s. Kelso for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 5); s.s. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, July 5; Swansea, July 10); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 18); s.s. Maronian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 23); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 26; Swansea*, July 26). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (July 1); s.s. Champollion for Alexandria, Jaffa, and Beyrout (July 1); s.s. Lotus for Alexandria, Jaffa, and Beyrout (July 8); s.s. Theophile Gautier for Piræus, Istanbul, Izmir, Larnaca, and Beyrout (July 15); s.s. Mariette Pacha for Alexandria, Jaffa, and Beyrout (July 15).

The Egyptian State Railways have given a contract to Ericsson Telephones, Ltd., Beeston, Notts, for telephone apparatus.

The Egyptian Department of Irrigation have given a contract to Yarrow and Co., Scotstoun, Glasgow, for a boiler for a Nile steamer.

Engineering Topics

(By An Engineering Correspondent)

Gas.

About a quarter of a century ago there were a number of engineers connected with the electrical industry who prophesied the early demise of gas as a source of light, heat, and power. Time has shown that there is room for both gas and electricity in the commercial and domestic worlds, and that co-ordination between the two instead of cut-throat competition is to the good of all concerned. The recent annual meeting of the Institution of Gas Engineers at Leeds was the first to be held since the granting of the Charter, and it has already been pointed out that it is a curious coincidence that the meeting took place in the town in which the first chair in gas engineering was established in a British University. It was very interesting to hear, from Prof. J. W. Cobb, the Livesey Professor of Gas and Fuel Industries at the university, of some of the activities in which that centre of learning and the Institution have been associated.

Professor Cobb drew attention to the need for improved efficiency and economy in the gas producing industry, and hinted that the present prosperity of most gas undertakings was due to the increased demand for the various by-products of the industry, rather than to an increased recognition of the many good points of gas itself. The use of all kinds of smokeless fuel is on the increase, and as the industry supplies also a large amount of liquid fuel, in the shape of light oils, naphthas, benzole and tar, and heavy oils, for all of which good prices are being realised, it is evident that the gas undertakings of the country are in an exceptionally good position at present. It is also developing rapidly, and is, in so doing, budgeting on a continuance of the present demand for its by-products. Whether that course is or is not altogether wise, remains to be seen. If the trade of the country is at the beginning of a serious fall, as many prophesy freely, the chief market to be affected will be that of iron and steel, which is a large user of gas-works by-products. The motor trade also would be amongst the first to be heavily hit, and that again would affect the gas industry, through its oils and motor fuels by-products. Still, those responsible for the developing of the gas industry must, it may be taken, have considered future trade in all its possibilities before going in largely for extensions of plant and new and improved machinery. There is one good point in connexion with the industry, and that is the amount of attention which is being paid to technical education. By the comprehensive scheme of the Institution of Gas Engineers, the training at evening classes of those engaged in practical work during the day is given every encouragement. The University of Leeds, for example, provides a three or four years' full time course in the Dept. of Coal and Fuel Industries for those intending to enter the profession of gas engineers and who wish to undergo an intensive theoretical training in addition to the workshop experience they are getting elsewhere. Further, there are scholarships which enable promising young men to obtain this University tuition, and possibly the publicity which is being given to this scheme—a publicity I am pleased to augment as far as I can—is due to the fact that the demand for trained men in the gas industry largely exceeds the supply.

Pipelines.

One of our leading technical journals has drawn attention to the need for ensuring that the walls of cast iron pipes sunk in the ground are strong enough to withstand earth pressure. It points out that for years past engineers have been under the impression that when a deep trench was dug, pipes laid at the bottom, and the trench earth filled and rammed, that an "arch" of earth was formed over the pipe, sufficiently strong and stable to hold up the rest of the earth filling and so carry its weight, keeping it off the pipe. The *Contract Journal* shows that this view is fallacious and that actually the whole weight of the filled-in earth falls on the pipe. It instances a pipeline over 2,000 feet long, composed of 48-inch cast iron pipe and a second of 3,500 feet of a double line of 48-inch pipe, laid in 1895, the pipe wall being the usual full inch in thickness.

It appears that from the source of the pumping station, about 4,600 feet away, a water supply was carried in a 10-foot brick conduit, and continued in one single and two double lines of 48 inch main. The soil in which the pipes were laid was a clean sand, carrying water, and absolutely stable. The pipes were laid at a depth of from 9 to 28 feet, according to the contour of the country, and a proposed change in connexion with a road level led to the pipeline being examined. To the surprise of the engineers it was found that in one length of 2,000 feet there were 59 pipes badly cracked. In the 3,500 foot run there were 32 cracked in one stretch and 11 in the other, and the cracks were very bad and were old-standing. In most cases the crushing effect was most noticeable, the pipes being cracked and flattened, and, whilst most of the pipes were cracked on the top or the bottom quite a number were cracked at the sides. The cracking of these pipes is an unusual demonstration of the necessity for designing pipelines to carry safely, when empty, the full earthload which they will have to stand up against in practice, and that no dependence should be placed either on the supporting power of the earth pressure on the side, or on the so-called arch action of the earth above the pipe.

An Istanbul message states that the consortium of Turkish and foreign banks, which was formed last March with the object of assisting the stabilisation of the exchange, is to be prolonged until the end of this year.

The traffic receipts of the South Indian Railway Company for the week ended May 24 amounted to Rs.12,80,742, making the total from April 1 Rs.97,14,680, as against Rs.1,01,85,123 for the corresponding period of the previous year.

Company Meetings.

"SHELL" TRANSPORT AND TRADING COMPANY.

Dividend Maintained on Larger Capital.

Viscount Bearsted's Speech.

The thirty-second annual general meeting of the "Shell" Transport and Trading Company, Ltd., was held on June 23 at the Cannon Street Hotel, London, E.C.4. Viscount Bearsted, M.C. (the Chairman), presided.

The Secretary (Mr. E. A. Smith-Rewse) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Before dealing with the general situation during the past year, or with the position as we find it to-day, I will comment briefly on the salient points of the balance-sheet and profit and loss account which are before you.

Comparing the accounts as now laid before you with those of the previous year, it will be noticed that the balance-sheet totals have been increased by approximately five and three quarter millions. This has been caused primarily by the issue of 3,983,754 Ordinary shares allotted at par to the holders of Ordinary shares as at January 1, 1929, being an issue at the rate of one new share in respect of every five old shares; and 150,000 Ordinary shares issued and sold in Paris at a premium as mentioned in the report which all of you have received. There is further an increase in profits of £1,036,485, the remaining small difference being principally accounted for by an increase in creditors of £42,000. The premium less expenses on the 150,000 Ordinary shares issued during the year, which will be seen from the balance-sheet to have amounted to £527,444 3s. 9d., has been added to the reserve account, which now reaches the figure of £6,881,609 10s.

As before mentioned, the profit and loss balance has increased by a sum of £1,036,484 16s. 4d., and amounts to £6,720,990 12s. 3d. This enables the Directors to recommend a final dividend on the Ordinary shares of 15 per cent., making with the interim dividend of 10 per cent. already paid, a total dividend for the year of 25 per cent., free of tax. This final distribution will absorb £3,618,204 3s., whilst the interim dividend on the Ordinary shares paid in January, 1930, and the dividends on the First and Second Preference shares already paid will have absorbed the sum of £2,862,136 2s., thus leaving a balance to be carried forward to the next year of £240,650 7s. 3d., against the balance brought in at the commencement of the year of £237,604 0s. 11d. It will be noted by you that notwithstanding the issue during the year of 4,133,754 Ordinary shares the Directors have been able to recommend that the dividend for 1929—on the increased capital—shall be the same as that paid for the year 1928. No doubt you will all consider this an eminently satisfactory result.

Turning to the asset side, it will be noted that the property account stands at practically the same figure as in the previous year, there having been only a reduction of £71,666, 17s. 1d., this account now representing an amount of £26,613,208 19s. Balance of dividends declared by sundry companies has increased by £1,057,191 4s. 2d., whilst the investments as detailed in the balance-sheet before you have increased by £3,835,398 12s. 8d. and now stand at the figure of £10,462,500. This increase, as you no doubt appreciate, is the direct result of the increase in capital previously referred to, and for the same reason it will be noted that the cash at bankers on current account at short notice has increased by a sum of £1,026,351 6s. 2d. to £1,158,482 14s. 7d., so that the total liquid assets at December 31, 1929, amounted to £11,620,982 14s. 7d. This abnormally high figure will, of course, be gradually reduced as the new capital raised is absorbed in extensions. The Directors as heretofore are able to assure you that all depreciation necessary has been fully covered by all the companies in which you are interested.

World Production of Petroleum.

I will begin my survey of last year by referring to the world production of petroleum. Again the total figures during the year show a very substantial increase. Unfortunately also this increase has been at a greater rate than that of the previous year, which was only nine million tons, whilst production in 1929, as compared with that of 1928, amounted to not less than 210,600,000 metric tons, against 187,600,000 metric tons for 1928, an increase of 23,000,000 metric tons. Of this increase the United States of American have been responsible for about 14,000,000 tons, and this notwithstanding the fact that real efforts have been made in that country to keep production within bounds in order that the indusry might be put on a more satisfactory basis, and supplies of petroleum conserved for the future requirements of the world. In Venezuela the production increased by about 5,000,000 tons, and here again definite steps have been taken in order to conserve supplies, and I trust that common sense will bring about a situation which will prevent the wastage which has been going on in these two countries, as unless tangible results are achieved in this direction more and more money will be spent unnecessarily, and the policy of leaving the future to look after itself will continue. The production in the other countries throughout the world has been more or less maintained at approximately 1928 level, and therefore it is to the United States of America and to Venezuela that we must look for an improvement in the present situation. I am glad to be able to report that there appears to be a distinct hope of common sense prevailing in this matter of wasteful production, as we are still endeavouring by friendly co-operation to conserve supplies, to produce as cheaply as possible, and to frame our production programme in a manner which will give to the consuming public the best possible advantage from the proved natural resources of petroleum.

With regard to our group's production, this has increased from 22,000,000 tons in 1928 to 25,000,000 tons in 1929, the main increases being in Venezuela, where the output went from 7,000,100 tons in 1928 to 8,800,000 tons in 1929; and in the Dutch East Indies, where there was an increase of about 750,000 tons. As I have already indicated, we are only too willing to bear our full share of any reasonable policy of conservation which may be decided upon throughout the industry, and as a result of the friendly negotiations previously mentioned I trust that our figures of production for the current year will reflect a measure of progress in the policy of conservation. This progress is desirable from two points of views; firstly, that of world conservation, to which I have already alluded; and secondly, and unfortunately, because of the fact that as the general trade of the world is at present undergoing a period of acute depression, the demand for petroleum products may not show an increase in the same ratio as in the past. Looking at our industry from these two points of view, therefore, it becomes all the more desirable that those who are responsible for the policy and direction of petroleum companies should turn their minds more towards greater efficiency in producing refining, shipping, and marketing, rather than to the further unnecessary depletion of the oilfields throughout the world.

So far as the companies controlled by the "Shell" group are concerned, I am glad to say that we have progressed far along the lines of stimulating the use of petroleum products, not only in connexion with those products which are so well known to everyone, but also in connexion with special products which we have been able to manufacture from crude petroleum. During the past year we have placed on the market various new commodities manufactured from crude petroleum, and although many of these are still in the introductory stage, I am hoping that before long we shall have made definite progress in finding new outlets. In saying this I am sure that you will be glad to learn that in every case where a new commodity is

THE CONVENIENCE OF THE CHEQUE

For those who know beforehand where they will be likely to require money, the system by which the Westminster Bank can arrange for a customer to cash his own cheques abroad is an undoubted attraction. Any local branch manager will be pleased to arrange with the Bank's agent in Poonah, say, and Benares, and Jubbulpur, to cash a customer's cheques within any pre-arranged limits. Nothing but a cheque-book need be carried, and the utmost ease and safety are enjoyed

WESTMINSTER BANK LIMITED

marketed by us under the "Shell" name, it carries the guarantee of the "Shell" group, which is not given until the most searching and prolonged scientific investigation and commercial tests have demonstrated that it is in every way stable and reliable for the purpose for which its use is recommended.

Competition in the Industry.

During the year 1929 the market throughout the world for the primary petroleum products showed very little change as compared with 1928. As is normal in the petroleum industry, we have had to meet severe competition, and in many parts of the world prices—because of this competition—were forced to an uneconomical level. That we were able to maintain our fair share of trade is due not only to the unvaried good quality of our products, but also to our elaborate and efficient organisation, and to the unremitting loyalty and zeal of our staff in every country in which we do business. In this connexion I think it is only right that shareholders should realise how great an asset we possess in the shape of our staff. It has been built up over many years by a careful selection of personnel, and this company may well be proud of those who work for it, just as the men and women who serve it are proud of the company for which they work.

Our fleet during the past year was represented by nearly two million tons carrying capacity of ocean-going tankers, including the fleet of the Eagle Oil Transport Company, Ltd. Towards the end of the year orders were placed for seven small motor-ships of 2,000/3,000 tons carrying capacity, these vessels being intended to replace some of our older vessels which are now becoming obsolete and which are at present plying in Far Eastern waters. In the early part of this year a very important order for twenty new motor-tankships, each of 11,500 tons loading capacity, was placed, and I am glad to be able to state that eight of these new vessels were placed with shipbuilders in the United Kingdom. These orders, representing—as they do—an expenditure of about one and a half million sterling, have added to the normally large expenditure which is made each year in the United Kingdom for ships, steel and iron goods, and manufactured articles of every description, which are required on our vessels, on our fields, by our fleet, and throughout our refineries and our distribution system. In this connexion I may say that during the year under review we have placed orders in the United Kingdom to an amount of not less than £7,500,000 sterling, this not including the eight large vessels previously mentioned.

I would draw your special attention to our operations in the Argentine. Our production in that country during the year 1929 was only 15,000 tons, against 50,000 tons in 1928, and this notwithstanding the fact that our estimated potential production is to-day over 350,000 tons per annum. The lack of progress during the year was due to our being obliged to suspend operations in consequence of the withdrawal of a permit granted in the early part of the year for the building of our refinery at Buenos Ayres. I am glad to be able to tell you that this refinery permit has recently been ratified, and steps are now being taken to proceed with the normal development of the concessions in the Argentine. That country at present is largely dependent upon imported petroleum products, and I am sure that the wise decision which has been taken by the Argentine Government relative to the encouragement of the local producing and refining industry will have a beneficial effect on the country and on all concerned.

The motion was carried unanimously.

OTTOMAN BANK.

Conditions in Turkey.

A Difficult Year.

The annual general meeting of the Ottoman Bank was held on June 24 at Winchester House, Old Broad Street, London, E.C. General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The Secretary (Mr. W. P. Sheppard) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and Gentlemen,—I have been informed that this meeting is properly constituted and I presume that it is your pleasure that the report and balance-sheet circulated among you should be taken as read.

I think it will be of interest to give you a short review of the conditions prevailing in the countries which constitute our field of action.

The Turkish Harvest.

In Turkey the past year has been difficult, although the various crops showed in quantity a general increase over those of the previous year. The production of wheat was 2 million tons, against 1,600,000 in 1928; cotton, 130,000 bales, against 110,000 bales; and tobacco, 40 million kilograms, which was a yield above the average. An exception, however, was the crop of nuts, which is ordinarily an important export, the harvest of which was almost entirely destroyed on the eve of maturity. This meant a loss of at least a million pounds sterling to the credit side of the commercial balance of the country.

Two other factors exercised a depressing influence on Turkish exports.

One factor was the world depression in agricultural prices, a serious matter for a country which is purely agricultural.

The second factor, more particularly Turkish, was the increased competition which its exporters encountered on the world markets for products which had always been essentially associated with Anatolia. In the tobacco market Greece and Bulgaria, in the fruit market California and Australia, in the mohair market America and South Africa, in the carpet market Greece again, have all intensified their production of commodities for which Turkey was previously the prime market.

The results can be seen in the decrease in the value of Turkish exports. Statistics provided by the Customs show a fall from 192 million Turkish pounds in 1925 to 173 millions in 1928 and a further fall to 155 millions in 1929.

It is now recognised in Turkey that a serious effort is needed to encounter this tendency, by standardising the quality of its products. The results of this are seen already with regard to tobacco, thanks to the intelligent initiative of the Administration of the Monopoly.

With regard to imports, the year 1929 was also unfavourable because, as we foreshadowed in our remarks last year, large quantities of wheat had to be imported. Further, to avoid the increase in the Customs duties which came into force during the year, there were excessive imports of manufactured goods resulting in an increase of 32 million Turkish pounds under this heading.

The effect was inevitable, leading to numerous failures, not only in Istanbul, but also in the country districts.

This situation has necessarily restricted the operations of the bank.

Turkey's Adverse Trade Balance.

The commercial balance of Turkey for the year shows a deficit of 100 million Turkish pounds, as compared with 50 millions in 1928. But this is not all. Last year the Turkish Government began to provide in its Budget for the service of its share in the old Ottoman Public Debt and had to provide the monies for this service in currencies outside its own country. At the beginning of each month from June, 1929, it paid in to your establishment the provisions for the coupons due for payment on November 25, 1929, and May 25, 1930.

The Government had also to provide the annuity due on the purchase of the Anatolian Railway, and finally the railway programme which was actively carried out on the lines Angora-Sivas, Samsoun-Sivas, and four other railways entailed heavy payments abroad.

The Currency Crisis.

These various elements produced, towards the end of last year, a sharp depreciation of the national currency. There was a moment of crisis such as other countries with unstabilised currencies have experienced, but the Government took prompt steps to alleviate the situation. It imposed an economic limitation on exchange operations and gave a good example by strict economy in administrative expenditure. At the same time, with the assistance of a Consortium of Banks, it formed a *masse de manœuvre* in order to protect the exchange.

To these remedial measures we contributed our share by extending the credit of 400,000 sterling, lent to the Government over and above our obligations under the concession. The crisis was duly met without disturbance to the Budget and without seriously affecting internal prices, but it became clear that steps were urgently needed to end the instability of the Turkish pound, and to arrive at an equilibrium in the Budget. We had the honour to be consulted by the Minister of Finance and we took the occasion of submitting to him the necessity of action on these lines. The Government, in addition to the measures already taken with regard to foreign exchange, studied the possibility of stabilising the currency and constituting a central bank of issue. At the same time it laid before the representatives of the bondholders the effect which the situation could not fail to produce on the External Debt Agreement signed in Paris on June 13, 1928.

A month ago we had the great satisfaction of learning that the Turkish Government, for the purpose of studying the different elements of the budgetary and monetary situation, had invited a study and report from a specialist of world-wide repute, M. Rist,

Digitized by Google

whose advice has been responsible in a large measure for the monetary restoration of Europe.

The Position in Egypt.

In Egypt the political situation has changed considerably since our last meeting. A new Government has been constituted and Parliament restored, but the result of the efforts of these two bodies cannot yet be tabulated.

The Government hopes to obtain, by a considerable increase in Customs Duties, an improvement in receipts of about 3 million Egyptian pounds annually, to be utilised for the creation of national industries.

During 1929 there was a steady fall in price of Egypt's principal product, cotton. The crop for 1928-29 exceeded 8 million kantars, and it is estimated that the crop for 1929-30 will be even greater.

Palestine and Trans-Jordan.

The branches of the Palestine and Trans-Jordan group have, on the whole, progressed during the year, and the results have been satisfactory. The riots of August last have had, however, a disturbing effect on the commercial community.

The improvement in the general economic situation in 1928 and early 1929 was not maintained, and though the orange and grain crops were above the average, prices were unsatisfactory and exporters suffered accordingly.

Reports of the 1930 agricultural situation are satisfactory.

Economic Progress in Cyprus.

In Cyprus further economic progress was made. The total revenue of the Colony rose from £806,553 to £840,675, and the surplus increased to £41,614.

From an agricultural point of view the year was satisfactory, but the external world conditions retarded exports, particularly of carobs and raisins.

The beneficial effects of the co-operative credit movement, financed by the Agricultural Bank of Cyprus, Ltd., in which we are largely interested, have steadily increased, though the lack of exports has temporarily affected the liquidity of the Co-operative Societies.

Trading Conditions in Iraq and Persia.

It had been hoped that trading conditions in Iraq during 1929 would have been better than during the previous year, but agriculture suffered from the flooding of the Euphrates, which damaged about fifteen per cent. of the crops, and the cotton crop was also damaged by disease.

In Persia the trading conditions were satisfactory during the first half of the year, but during the latter part were affected by the fall in value of the kran and the substantial decrease in the American demand for carpets of Persian manufacture.

Important progress was made in the construction of the railway line linking up the north and south of Persia, but subsequent difficulties between the Government and the contractors resulted in a temporary suspension of operations.

In the Levant countries under French Mandate the year 1929 was marked by a very abundant harvest, in anticipation of which there was considerable commercial activity, but this was nullified by a fall in price and a restriction of markets, which made the disposal of the harvest a matter of difficulty. Our filiale, the Banque de Syrie et du Grand Liban, nevertheless increased the volume of its operations and the profits realised permitted the maintenance of a dividend of 11 per cent.

The Situation in Greece.

In Greece a serious economic crisis occurred, as a result of which commerce and industry generally suffered. Signs of improvement did not appear until the beginning of the present year. The British-French Discount Bank, Ltd., which we established in Athens in 1928, was compelled under these circumstances to restrict its activities; thanks to a prudent policy, the bankruptcies and failures only affected the results to a very moderate degree and a profit was realised, which was carried forward to the present year. I recall to you that this bank only began to function in May, 1928, and last year was its first complete year. The branch in the Piræus, which we opened in 1929, we believe to be promising.

The branches which our own establishment maintains in Salonika and Kavalla naturally felt the results of the stagnation which was prevalent on all the Greek markets.

Yugoslavia's Improving Position.

In Yugoslavia the reorganisation of the Banque Franco-Serbe, although its effects could only show themselves during part of the year, has already given excellent results: not only has our new filiale placed its assets on a sound basis, but it has displayed an activity which has led at the same time to an increase in its reserves and a corresponding development in the employment of its funds. Circumstances in general were in favour of the bank; Yugoslavia is essentially an agricultural country, and last year the wheat and maize crops were exceptional. The commercial balance, which showed a deficit in 1927 and 1928, showed last year a balance on the right side of 300 million dinars. This resulted in a considerable increase in the reserves abroad of the National Bank, and a continued stability of the dinar, the legal stabilisation of which is now approaching. The abundance of money has favoured continued business activity, by which our filiale has profited. Its accountts show a net profit, which has been carried forward. In October, 1929, it negotiated with the Administration of Monopolies a credit of 100 million French francs to finance the tobacco crop.

As in preceding years, our offices in London and in Paris have contributed their share to the results obtained, although the cheapness of money has affected the conduct of their business. As you will notice, there has been a further development in the acceptances of the bank.

Balance-sheet.

The balance-sheet which we submit for your approval has been drawn up with all prudence. Those elements on the credit and debit side which the exigencies of our business compel us to maintain in currencies other than those of the balance-sheet, have been converted into pounds sterling at the rates ruling on December 31, 1929.

As drawn up, the accounts show for the year 1929 an available balance of £229,069, approximately the same as last year. With a carry forward of £23,248, the sum at our disposal amounts to £252,317.

We propose to you a division of this sum into two different parts, one for distribution to the shareholders, the other to reinforce our provision for contingencies, in continuation of the policy which has had your approval during recent years. If you are in accord with our recommendations, a division of 5s. per share will be distributed, which in Paris will be paid free of tax. This dividend will be payable from June 30 next in Istanbul, London, and Paris. From the remaining amount of £127,318 a sum of £100,000 will be placed to provision for contingencies, and the balance of £27,318 will be carried forward.

As you will observe in the report, Viscount Goschen has been nominated, subject to your ratification, a member of the General Committee. I am sure you will approve our decision in inviting our eminent colleague, as soon as he was free from his high office in India, to fill again the place which he vacated in 1923.

I should not like, Ladies and Gentlemen, to end this speech without giving once more to our staff the thanks which are due for their continued loyalty and service to the bank. With this, I am sure, you will be glad to associate yourselves.

Now, Ladies and Gentlemen, I beg to move: "That the report and accounts now read be received and adopted; that the dividend for the year ended December 31, 1929, be fixed at the rate of 5s. per share, and that this dividend be payable in Istanbul, London, and Paris on June 30, 1930."

M. Raoul Mallett seconded the resolution, which was carried unanimously.

The Chairman.—I have also to move: "That Viscount Goschen be and he is hereby elected a member of the General Committee."

The Earl of Bessborough, C.M.G., seconded the motion, which was unanimously approved.

The Chairman.—I have also to move: "That Sir Guy Granet, Sir Albert Stern, Monsieur Jean Bossonnes, Monsieur Felix Vernes, the Earl of Bessborough, and Mr. A. C. Gladstone be and they are hereby re-elected members of the General Committee."

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., seconded the resolution, which was carried unanimously.

The meeting ended with a cordial vote of thanks to the Chairman, which he briefly acknowledged.

The Yugoslav National Bank has reduced its bank rate from 6 to 5½ per cent.

The Roumanian Government has given a concession for the exploitation of the telephone service to the International Telegraph and Telephone Corporation of America, working in conjunction with Messrs. Morgan and Co.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended June 14:—

Grain.—Shipments of grain mainly to Antwerp and Rotterdam have been satisfactory, in spite of the fall in prices abroad. German destinations have been neglected whilst, on the other hand, considerable business has been concluded for U.K. ports. The Italian market has also been an active and important buyer of maize during the last few weeks, and lately Marseilles has come forward as an important purchaser of the same commodity. Although arrivals of grain have been rather large, the quantity of maize available has, nevertheless, not been sufficient to meet requirements. The freight market was active this week and spot rates were slightly better, Antwerp and Rotterdam being 10s. to 10s. 6d., U.K. 12s. to 12s. 6d. Adriatic 11s. to 11s. 6d., and Marseilles about 10s. 6d. to 11s.

Timber.—The situation remains unchanged and inquiries from abroad are still very limited. A few freight engagements are reported, the most interesting being a parcel of about 100 wagons for Rouen at £9 per wagon, and about 110 wagons for two ports Syria at £7 5s. per wagon. There are also a few parcels on the market for South France, which have not been placed up to the present, as steamers are unwilling to accept the low rates prevailing and prefer the more attractive grain offers. A steamer, a 6,000 tonner, has been fixed for Basrah for a mixed cargo of iron and timber, but the chartered rate has not yet transpired. Freights are about unchanged but mostly nominal owing to the limited demand.

Weather and Crops. The weather has been fine and hot, the temperature having risen considerably during the week. Local thunderstorms have been reported in most parts of the country accompanied by more or less light showers. After rising steadily, the barometer here fell yesterday and it became somewhat cooler again. Uncertain weather continues here with rapid changes from cloud to sunshine and there was moderate rain for about an hour during the night. Barley is now being cut.

Sulina.—Bar depth 24 feet. The laying of the foundation mattresses of the north pier extension is progressing rapidly, thanks to a long spell of calm weather, and the prospects are good for the completion of the extension this year. River depth minimum 24 feet.

Constantza. Grain.— About 2,000 tons arrived from the interior during the week and about 8,000 tons were shipped to the Weser. Seventeen vessels loaded nearly 60,000 tons petroleum products and three took oil fuel for bunkers.

Bulgarian Report.

Bourgas, June 7. Further cargo has been booked at Varna and Bourgas for Antwerp/Hamburg range for July/August, and some for September shipment at rates from 9s. to 9s. 6d. It is reported that the engagements over the above period so far amount to 7,000 tons. The weather was fine and hot at the beginning of the week but turned rainy again on Wednesday. Damage by hail has been reported from several parts of the country, but in general crops remain in good condition. Reaping of barley has begun in a few places in southern Bulgaria and is expected to become general in the course of next week.

The Egyptian Ministry of Communications, Egypt, has under consideration the construction of a motor road between Lake Karoun in the Fayoum and Alexandria.

A report of the Agricultural Bank of Bulgaria states that fruit crops in all districts in Bulgaria are developing well under favourable weather conditions. Measures taken against a recurrence of last year's damage from pests and disease have been successful and good crops are expected. Further extensions have been made in the cultivation of grapes for export in the present season and efforts will be made, not only to maintain the good quality of the fruit, but also considerably to increase exports and extend the trade to markets other than those in which Bulgarian table grapes have already established a reputation, such as the Vienna market.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 18:—

Egyptian Futures.

Sakel Contract.—We have been faced with a combination of "bearish" factors since our last report of the 4th instant, with the result that a sharp decline in values has been recorded. In the first place, for the greater part of the period under review, the trade offtake has been at a standstill, a state of affairs not confined to this country alone, but also to Continental outlets. A further depressing feature has been furnished by the action of the American markets, where fresh low seasonal records have been reached. Finally, advices from Alexandria have been extremely poor, the passing of the American Tariff Bill and the resignation of the Egyptian Government inducing heavy liquidation and further encouraging the "short" element to hammer values down. The culminating effect of all these influences was witnessed yesterday, when prices here bottomed at 10.80d. for Novembers and at 21.175 dollars in the overseas market. From these levels more support became evident, and with the reactionary tendency, aided by a simultaneous movement in the American departments, a distinct hardening resulted. The upward swing has received further momentum to-day, a sharp advance in Alexandria, increasing trade interest, and short covering lifting values nearly 60 points from yesterday's opening basis, and thus reducing the decline on the fortnight under review to 85 points for old crops and 85 to 64 points for distant positions. In view of the fact that near cotton in our market now stands at about 275 points below the Government's July buying basis in Alexandria without calculating charges or shipping expenses, and also because stocks of tenderable cotton here are quite inadequate to protect the contract, we strongly advise those who have "hedges" or short commitments in these positions to take advantage of the present opportunity to either close out, or transfer their holding. July and November are now practically running level, and there appears every likelihood that even a slight improvement in the offtake would quickly force the former to a distinct premium.

Upper Contract.—In conformity with the other markets values in this contract have declined sharply during the interval since our last report. Some recovery from the low levels established yesterday morning has been recorded, and at the time of writing a firmer undertone is in evidence. Supplies of tenderable old crop cotton are now very limited, and, as whatever business that has to be covered must be attracted here on account of our outstanding cheapness, it appears probable that the premium between near and new crop deliveries will widen further. Trade reports fail to indicate any improvement, but spot business has shown a distinct tendency to expand during the past two days. Whilst there appears nothing tangible in the situation to warrant any material upturn, values now stand at a level which must discount many of the recent "bearish" factors.

Egyptian Spot.

A very quiet state of affairs has prevailed in this department for the greater part of the time since our last report. However, during the past two days there has been a welcome improvement in the offtake, Uppers especially coming in for a good deal of attention. We again draw attention to the cheapness of the Liverpool stock, our recent further widening with Alexandria making locally-hedged cotton more attractive than ever. This position appears to be more generally recognised by Continental users, who have latterly availed themselves more freely of the position ruling here than local consumers.

Sakel.—Sakels on the whole have been in improved request, buyers paying up to 200 on for some of the higher qualities; the lower grades appear to have lost their popularity for the time being, and very little business has been reported in these.

Uppers.—A good business has been done in this cotton at prices ranging from 20 to 50 on. The basis has a distinctly hardening tendency, and as supplies are now restricted a further appreciation appears probable. In some of the higher grades, prices ranging from 110 to 140 on have been paid.

Pilion.—Only a few odd lots of this variety have changed hands; the total stocks of this cotton now only amount to a few hundred bales.

Nahda has received very little attention from buyers during the past week, and we cannot trace any actual transactions having taken place.

White Cotton and Maarad.—More inquiry has been in evidence during the past few days, and one or two fair-sized lots of new crop cotton ranging in value from 150 to 200 on have been taken up by buyers.

Sudan Sakel.—The inquiry for this cotton shows signs of expanding, but actual business has been confined to isolated sales.

C.i.f. business.—There has been little inquiry for either old or new crop lately. However, with new crop prices now working down to what appears a very reasonable level, spinners will probably show more disposition to enter into contracts provided the present firmer tendency in the future markets is maintained.

Forwardings have been returned at 7,938 bales Egyptian and 2,284 bales Sudan. The estimated spot sales for the past two weeks

Digitized by Google

amount to 2,800 bales Egyptian and 1,220 bales Sudan Sakel. Quotations of Sakel show a reduction of 85 points. Upper quotations are reduced 95 points and Pilion 75 points. F.G.F. Sakel to-day, 12.45d. F.G.F. Upper to-day, 8.98d. F.G.F. Pilion to-day, 9.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 12, state:—

Our market has continued to decline during the week and prices close at new levels for the season. The week's summary of price movements is as follows:—Sakellaridis: July, 28.00 dollars, 0.02 dollars down; November N.C., 23.11 dollars, 0.74 dollars down; January N.C., 23.34 dollars, 0.66 dollars down; March N.C., 23.72 dollars, 0.66 dollars down. Ashmouni: June, 19.80 dollars, unchanged; August, 16.85 dollars, 1.15 dollars down; October N.C., 16.08 dollars, 0.82 dollars down; December N.C., 16.39 dollars, 0.79 dollars down; February N.C., 16.72 dollars, 0.83 dollars down; April N.C., 17.02 dollars, 0.81 dollars down; June N.C., 17.32 dollars, 0.88 dollars down.

Sakel.—After a fairly steady opening session of the period under review, the market reopened after the Whitsun holiday half a dollar down in sympathy with the accumulated decline in New York, and has since continued to follow that market to new low levels with a decline of ⅞ dollar on the week. Nothing has happened during the week to relieve the situation. Trade demand is lacking except for the persistent small demand for very low grades which has been the feature lately.

The Sakel/Uppers new crop straddle (November/October) this week stands at 703 points, against 695 points last week and 1,184 points at this time last year.

Uppers have been very weak, the decline fully keeping pace with that in Sakel in spite of the difference in their relative values, and the new crop premium over New York has accordingly shrunk to 205 points. Tenders against June so far amount to 578,250 kantars, and will probably reach over 750,000 kantars for the month. The Ashmouni/American new crop straddle (October/October) this week stands at 205 points, against 236 points last week and 286 points at this time last year.

The week's receipts amount to 38,226 kantars, against exports 65,228 kantars; the stock in Alexandria stands at 3,879,622 kantars.

Spot.—The market was closed on Monday last for the Whitsun holidays. The total turnover amounts to about 1,950 bales, of which we estimate 800 bales Sakel, 1,100 bales Ashmouni and Zagora, 30 bales Pilion, and 20 bales other varieties.

Sakellaridis.—There is very little change from last week; the small business which has been put through has been mainly in low grades. The bulk of the cotton above Good Fair at present offering on the market has already been rejected by the Government on tender.

Ashmouni and Zagora.—With the large June tenders, these varieties are also getting scarce. The demand is still concentrated on the low grades.

Pilion.—Practically no business done.

Other Varieties.—Nothing to report.

Stock and Share Markets.
